

I spend too much money completing vendor product inspections. I wish I knew that my control valve supplier produced its products to meet marine specifications and standards.

# YOU CAN DO THAT

**Third party certification means no time wasted on completing vendor product inspections.**

Every Fisher® control valve received Lloyd's Register's Marine Type Approval for process applications within the offshore oil and gas production industry and for those high integrity control valve applications that could potentially affect the safe operation of the offshore installation. In fact, all Fisher products have been thoroughly tested per Lloyd's Register requirements to confirm compliance with marine industry standards.

All product designs have been certified to meet rigorous offshore codes and standards. In addition to Marine Type Approval, Fisher facilities in all world areas have been approved to manufacture products certified to Lloyd's Register Marine rules. And one more thing—no other control valve supplier in the world can say the same. Now, you can spend your time on...well, whatever you need to. Click on the QR code below or visit [www.Fisher.com/Approved](http://www.Fisher.com/Approved). **Verify the facts.**
