

Software Services

METCO Software Services is a leading supplier in the provision of Management Information Systems (MIS), Production Data Management Systems (PDMS), Yield Accounting and Loss Analysis solutions.

We help our clients to discover, design and implement real-time solutions for analysing process and plant performance, enabling the improvement of Key Performance Indicators (KPIs) and providing integration from process plant through to business system.

METCO solutions are continually:

- Delivering Lower Operational Costs
- Improving Quality and Yields
- Increasing Profitability
- Providing Regulatory Compliance

Our dedicated team of consultants, project managers and engineers provide the necessary expertise to support a project throughout its entire lifecycle:

- Consultancy
- Design
- Implementation/engineering
- Training
- Support (proactive and re-active)

This is backed by decades of application experience, to assist in the definition of business objectives, assess plant and process performance, and determine project requirements.

Our Solutions are based upon the OSISoft Real-Time Performance Management (RtPM™) Platform which provides a scalable, extensive, feature rich set

of data, analytics, reporting, and visualisation tools.

Solutions include:

- Scalable solutions from a standalone process historian through to large enterprise wide systems spanning multiple assets, plants and locations
- Application specific module development e.g. manual data entry and capture
- Collaboration Portals, providing one common user interface to a multitude of applications
- Yield accounting and loss analysis applications
- Application Support Services
