

# A small problem can sometimes go undetected.

## If only you'd seen it coming.

You rely on many valves to keep your plant operating smoothly. It takes only one non-responsive valve to upset your entire process. With this in mind, we've designed the Fisher® 4320 wireless position monitor for your analog control valves. The 4320 provides position feedback without the cost and hassle of wires. What's more, it's simple to use and easy to install. Now you can detect small problems before they become large. Want to learn more? Visit [www.Fisher.com/4320](http://www.Fisher.com/4320).
