

Need More Performance?

Fisher, Control, WhisperFlo, CON-TEK, easy-e, Vee-Ball and FIELDVUE are marks of Fisher Controls International, Inc.
The Emerson logo is a trade and service mark of Emerson Electric Co. © Fisher Controls International, Inc. 2001. All rights reserved.

Boost your plant's operating efficiency and availability. Turn to Fisher technology and innovation.

Our industry-leading power and severe service valves can handle your difficult applications with ease. For instance, when cavitation restricts flow and damages valves in your boiler feedpump recirculation loop, our Cavitrol® trim will eliminate the effects of cavitation altogether.

Our WhisperFlo™ noise abatement trim will tone down noisy and inefficient high-pressure valves and steam vents.

While our versatile CON-TEK® steam conditioning valves will meet the demands of high, intermediate and low-pressure turbine bypass applications.

Combine these plant efficiency boosters with industry-leading easy-e® globe and Vee-Ball® rotary valves for balance-of-plant needs. And add FIELDVUE® Digital Valve Controllers to your valve applications and gain real-time monitoring that helps you improve overall plant performance.

Is your application different than most? Then turn to our Special Products Group for a custom valve that's designed to meet your specific needs.

Top off these advantages with our startup and commissioning services. Shorten your project cycle time, eliminate rework and avoid delays... and add more megawatts to your plant's performance. Increase plant efficiency to power your world with the resource that the power industry relies upon for technology and innovation in control. Today, from simple to combined cycle, from coal to nuclear... consider your control valve problems solved and your plant's performance increased. With Fisher.
