

## HART devices available on (Rev AF) System Cards and Resource CD

### Complete HART DD Listing (MARCH-2017)

This database includes HART DDs that were first made available in the HART Communication Foundation (HCF) Library Release(s) 2016 Quarter 2, 3, and 4.

All other HART revision 3 or greater devices that are not specifically mentioned in this list would be supported as Generic devices.

Untested DDs listed are not loaded onto the System Cards at the Factory but are part of this Resource CD's "PC Database" and can also be downloaded from the internet.

To move the Untested DDs to a System Card of a unit, they must be manually added. See the Programming Utility Help (Manually Add/Remove DDs in a 475/375 Field Communicator) for further information.

Note: The *Easy Upgrade* feature is required to perform this procedure.
