

## Notice to Customer Regarding Support for Microsoft XP

In April 2012, Microsoft announced they would [discontinue support](#) in April, 2014 of their XP operating system. As a result, Emerson has also discontinued support of XP operating systems with the release of AMS Machinery Manager v5.61 (January 2015), but will continue support in v5.6 and older. This decision is based on the lack of technical assistance available for Windows XP, which includes the automatic updates from Microsoft that help to protect your PC. Customers continuing to use Windows XP could see their computers become vulnerable to new viruses and security risks. The AMS Machinery Manager v5.61 release will support the new Windows 8 and Windows Server 2012.
