

New Speed Lane Program for Daniel Control Valves

At Emerson, we are committed to reducing lead times on our high-demand products, enabling your operation to run efficiently with minimal downtime. That's why we are introducing our new Speed Lane Program for Daniel Control Valves to ensure orders for our most popular valves can be shipped within 10 days of order receipt.

Our Daniel 788 Digital Control Valve for Load Racks and our 765 Nitrogen Loaded Control Valve for Surge Relief are just a few of the models being offered in this new stocking program. The chart below contains details on the Speed Lane model configurations available, including line sizes, pressure ratings, standard material specifications and more.

While our goal is to maintain par levels of each control valve in the chart, the actual number of control valves available at any given time will fluctuate based on demand. To minimize inventory related issues, our supply chain will be closely managed on an ongoing basis to ensure optimal raw material availability.

We are excited to offer this new Speed Lane Program and look forward to significantly improving our deliveries to you. Additional line sizes and configurations will be added to this program in the near future to ensure the control valves you need most often are available to ship in 10 days or less. Contact your local Daniel sales representative today for additional details.

Daniel Control Valve Models Available for Speed Lane Orders

Model #	Function	NPS	ANSI Class	Voltage/ Spring Setting	Elastomers	Approvals	Maximum Order Quantity
788	Digital Control	2-in to 4-in	150-300	110 to 220VAC	Viton-LPG-AP	UL/CSA	6
