

Guardian™ Support and Factory Module Repair for CSI 6500 ATG

- Incident Management
- Lifecycle Management
- Risk Management
- Preferred pricing and a predictable support budget with Factory Module Repair Support

Offering extended value and flexibility to help you get the most out of your machinery health technology.

Introduction

Guardian™ Support is a prognostic service designed to optimize the reliability and performance of your machinery health products. It is the core element for Emerson Lifecycle Services, designed to help improve your competitive advantage and bottom line business results through critical service and support information. Guardian Support assists customers in actively managing their machinery health hardware and software assets and lifecycle costs.

Factory Module Repair support can assist in meeting your basic needs to ensure availability, asset utilization and attainment of cost management objectives.

Benefits of Guardian Support

Incident management delivers the expertise to troubleshoot and fix system failures. Slower repair times lead to longer production downtime. You strive to make efficient use of all your resources, but there can be a huge maintenance cost, in terms of both dollars and man-hours, to troubleshoot and fix a system if you're pulling away staff that should be focusing on other issues, or if your maintenance team doesn't have the right training or skill set. You need access to experts at all times to help you through critical issues.

Guardian Support provides incident management with standard 24x7x365 coverage at no extra charge. You can call at any time, or submit questions and issues through the dashboard on the Guardian portal. The Global Service Center (GSC) experts are always on-hand to walk you through steps to fix the issue. Information from Knowledge Base Articles (KBAs) helps onsite staff fix issues quickly and correctly. With a historical records of system issues, you can view all system incidents, calls and resolution. This makes it easy to share best practices and lessons learned, distribute information across your enterprise, build skills and collaborate with all your managers worldwide on similar issues.

Lifecycle management ensures your equipment runs reliably and is available. When done manually, it can take a lot of time to manage system hardware and software, to keep your assets current and to manage the lifecycle of all your equipment. With Guardian Support, you'll have access to a complete system inventory, so you can plan for upgrades, replacements and parts obsolescence. This is critical to sustaining your system investment as components, subassemblies and critically dependent software evolve. Use it to gain an accurate view of all the hardware, licensing and documentation in place, which is valuable for budget planning.

Guardian Support provides lifecycle management by matching your enrolled system-specific hardware and software content to its associated lifecycle status via the dashboard. Email alerts provide notice whenever there is a change on the lifecycle status of enrolled hardware/software. The service keeps an updated and accurate inventory of all system components and licensing in a readily viewable format through a secure site. Additionally with Guardian Support, Emerson's GSC provides expertise and advice on maintaining your system. You can submit questions directly through the portal or make a phone call. The Guardian site provides in-depth documentation and resources to help you troubleshoot or gain extended knowledge of your system.

Support Dates

Product Name: CSI 2130 Machinery Health Analyzer
Emerson Model: CSI 2130
Present Status: **Active**

Current Status Start	Active Status Start	Supported Status Start	Retired Status Start	Notes
09 May 2003	09 Aug 2013	09 Oct 2015	31 Dec 2018	

Product Status Definition

- Current** - The most current product offered, with published pricing, normal lead times, and complete support.
- Active** - Products that have been functionally replaced by the most current product, but remain available.
- Supported** - Product support is available, but oriented to maintenance.
- Retired** - These products are not available for purchase. Product support is limited.

NOTE: This definition pertains to standard products designed by Emerson Process Management, Process Systems and Solutions. Alliance and other 3rd party products are not covered.

Risk management through continuous improvement and support allows you to focus on critical business objectives. Patching, KBAs and hot fixes — left unknown or unattended — can lead to production loss, and it's important to understand the applicability, necessity and urgency of updates. You need to be fully versed in your hardware and how it can be compromised.

Guardian Support provides risk management by matching system-specific information to your systems. You'll have a proactive way to manage risk by way of a secure web dashboard and push email notifications. Improve capital efficiency and stay ahead of the technology curve with the latest software releases, including service packs and major new releases. Risk alerts are ranked for urgency, with recommendations given about what to install and when. This supports your work planning and prioritization so you can make better business decisions. Also, a visual dashboard gauges the overall health of your system. It's an easy way to increase performance as you see which systems need attention, and which are at low risk. Drill down into your system information using your own system names and immediately determine serial numbers, warranty status, versions, hot-fixes, lifecycle status, and more.

Title	Affected Area	Affected Nodes	User Notes
