

Discovery Visit

The success of a Maintenance and Reliability program is greatly accelerated with a Discovery Visit. We can help you gain valuable insight into your organization and provide ideas that will help jump start your maintenance, reliability and asset management initiatives.

The Discovery Visit is a two to three day on-site evaluation of your maintenance and reliability (M&R) program. It provides a valuable opportunity to:

- Explore the level of “business fit” between the companies
- Evaluation by a third party expert on the status of your current M&R practices, processes and procedures
- Educate part of your organization on M&R best practices

DISCOVERY APPROACH AND DELIVERABLES

Discovery: Discuss the current M&R practices, processes, tools and data. In addition to the meetings, we will conduct informal system and data reviews with the objective of forming a comparison to our stated best practices.

Education: Conduct a mini maintenance and reliability best practices awareness training session to discuss “what good looks like.”

Findings and Recommendations: Prioritized summary of our findings and recommendations, noting specific opportunities for immediate improvement.

Scorecard: Evaluate your current M&R practices against 25 functional areas of best practices standards and provide a baseline scorecard to portray the current performance.

DISCOVERY ELEMENTS

The Discovery Visit will focus on the core elements required to enable a balanced, integrated and sustainable maintenance and reliability program:

- Work Management
- Materials Management
- Reliability Strategies
- Information Management
- Support and Involvement

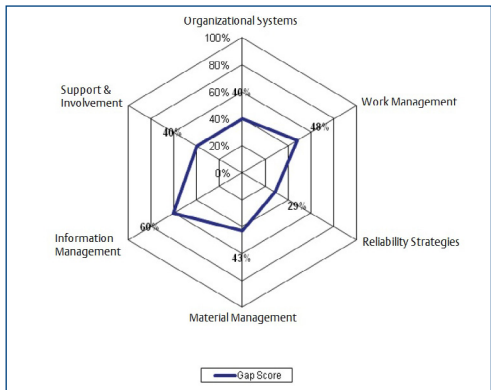

VALUE

This process combines evaluation, analysis and education to help you quickly understand your current situation and understand what you can do to get better.

It provides a basis for developing short and long term improvement strategies.

THE SCORECARD WILL:

- Provide a baseline score of enabling maintenance and reliability elements
- Compare to best practices
- Provide an initial quantification of the scale of the “performance gap”
