SUBJECT: Product Lifecycle Status of the 700XA Gas Chromatograph

To whom it may concern, the 700XA gas chromatograph is in “**Active**” status, per the Rosemount Analytical Product Life Cycle Policy. Active status is defined as:

The most current product offered. A product or spare assembly enters Active status on the date that it is released for sale. On that date, active product selling begins from published sales documentation (i.e., product bulletins, prospectus listing and order entry document pricing). These products are recommended for all new projects and major expansions.

As a part of the XA family of gas chromatographs, there is active development of the 700XA platform and there are no currently plans to change the lifecycle status of this product.

Details of our GC product lifecycle policy are available on the Rosemount.com website, under Product Lifecycle Policy. If you have any additional questions, please contact your local Rosemount sales representative.

Sincerely,

Shane Hale
Gas Chromatographs Product Director
