

I'm feeling the pressure of these stringent Quad "O" regulations. I need to meet compliance standards before I get tapped on the shoulder by the EPA.

# YOU CAN DO THAT

**FISHER**

With an array of Fisher® electric and pneumatic products, Emerson can solve your Quad "O" compliance challenges for crude oil and natural gas processes. When it comes to the EPA's New Source Performance Standards, it's important you know what resources are available to help you meet the requirements. Many Fisher pneumatic devices have been designed to accommodate the Quad "O" standard's steady state exhaust rate of six standard cubic feet per hour (scfh) or less, without restricting high output and rangeability. Or, you can further reduce your emission concerns with our fully electric solutions. With products like the Fisher L2e electric level controller and the easy-Drive™ electric actuator, you can maximize controllability without worrying about excess venting. To learn more about our compliance-ready portfolio or to compare consumption rates of any products on the market today, visit [Fisher.com/QuadO](http://Fisher.com/QuadO).
