

Emerson Flow Assessment Services

Maximize your investment and keep your process flowing

Have you experienced unplanned work due to aging meters?

Do you have confidence that your spare parts are current?

Do you need to rework batches due to incorrectly installed or configured equipment?

Do your instrument engineers have the latest training to install, startup, configure and troubleshoot your flow instrumentation?

Emerson Flow Assessment provides expert service and advice to help you optimize your process and improve overall equipment reliability. Understanding and tracking the status of your instrumentation is critical to ensuring optimal uptime, minimizing risk, and extending the lifetime of your flowmeter investment. If you are looking for a partner to help improve plant availability and product quality, the benefits of Emerson's Flow Assessment will help get you there:

- Manage reliability, lifecycle costs and act on obsolescence issues
- Optimize spare parts inventory to be the corner stone of operations
- Reduce reactive maintenance situations
- Increase core competencies of technicians through training
- Check correct installation including the technology selection and sizing
- Improve plant availability with state-of-the-art equipment
- Support for plant turnarounds in the early preparation phase

Types of Flow Assessments

FT Assessment – Consists of an audit of defined flow points within your facility, looking at reliability, installation, obsolescence, health, configuration and spare parts. We will evaluate the flow technology utilized, maintenance records and make recommendations for improvements to your process.

FT Optimization - Review and optimize your flow process conditions through consultancy around sizing, flow technology, installation, instrument settings and accuracy calculations. Evaluate your maintenance, spare parts and work to optimize your process.

FT Turnaround – Work to plan, manage and support turnaround maintenance, upgrades, calibration and replacements during your planned shutdown.

Your installed base

Our expertise

- Application
- Flow Technology
- Mass balance
- Accuracy
- Calibration
- Re-sizing
- Maintenance
- Training
- Spare parts
- Obsolete products
