

# Rosemount 3154N Nuclear Qualified Pressure Transmitter

## INDUSTRY LEADING PERFORMANCE

- Qualified per:
  - IEEE Std 323™-1974/1983/2003
  - IEEE Std 344™-1975/1987/2004
- 112 Mrad (1.12 MGy) TID Gamma Radiation
- 8.5g ZPA Seismic
- 435°F (224°C ) Steam/Temperature
- 0.2% Reference Accuracy

## Results Driven by Proven Measurement

### Introduction

Rosemount 3154N Nuclear Pressure Transmitters are designed for precision pressure measurements in nuclear applications which require reliable performance and safety over an extended service life. The 3154N is qualified per IEEE Std 323™-1974/1983/2003 and IEEE Std 344™-1975/1987/2004 with radiation exposure to 112 Mrads TID gamma, seismic levels to 8.5g ZPA, and for steam pressure/temperature performance. Stringent quality control during the manufacturing process includes traceability of pressure-retaining parts, special nuclear cleaning, and hydrostatic testing.

### Transmitter Description

Rosemount 3154N transmitters are similar in construction and performance to the proven Rosemount 3051 transmitters. Units are available in absolute (AP), gauge (GP), and differential (DP) configurations, with six pressure range options.

Direct electronic sensing with the completely sealed coplanar capacitance sensing element (see Figure 1) eliminates mechanical force transfer and problems associated with shock and vibration. Installation and commissioning are simplified by compact design, 2-wire system compatibility, and non-interacting external span and zero adjustments for standard calibrations. Wiring terminals and electronics are in separate compartments helping ensure that the electronics remain sealed during installation.

### Operation

Process pressure is transmitted through an isolating diaphragm and silicone oil fill fluid to a sensing diaphragm in the center of the sensor cell. Process or reference pressure is transmitted in a like manner to the other side of the center sensing diaphragm. The capacitor plates on both sides of the sensing diaphragm detect the position of the sensing diaphragm.

Figure 1 – The Sensor Cell

Figure 2a – Transmitter and Bracket Dimensional Drawings

**Notes**

(1) All dimensions are nominal in inches (millimeters)

Figure 2b – Typical Mounting Configurations

Center of Gravity Dimensions		Stainless Steel Panel Mount Bracket	Stainless Steel Pipe Mount Bracket (2 U-bolts)
Transmitter mounted Outside of Bracket	A	5.6 (142.2)	4.8 (121.9)
	B	0.9 (22.9)	0.9 (22.9)
	C	2.1 (53.3)	2.0 (50.8)
Transmitter Mounted Inside of Bracket	A	5.6 (142.2)	4.8 (121.9)
	B	1.6 (40.6)	1.8 (45.7)
	C	2.1 (53.3)	2.1 (53.3)

**SPECIFICATIONS**

**Nuclear Specifications**

Qualified according to:  
IEEE Std 323™-1974/1983/2003,  
IEEE Std 344™-1975/1987/2004  
As documented in Rosemount report D2013003

**Seismic**

When exposed to a disturbance defined by the required response spectrum with a ZPA of 8.5g (see Figure 3), accuracies are as shown in the following table:

Output Code	Range Code	Triaxial Random Multifrequency 8.5g ZPA	
		During	After
R	1	±1.75% URL	Within reference accuracy
	2	±0.5% URL	Within reference accuracy
	3-4	±0.3% URL	Within reference accuracy
	5-6	±0.2% URL	Within reference accuracy
T <sup>(1)</sup>	1	±0.4% URL	Within reference accuracy
	2-6	±0.2% URL	Within reference accuracy

(1) With damping set for time response = 0.4 sec or greater

**Radiation**

Exposed to a Total Integrated Dose (TID) of 112 Mrads (1.12 MGy), consisting of 2 Mrad (20 kGy) background radiation followed by 110 Mrads (1.10 MGy) accident radiation.

During and after initial exposure at a dose rate of 0.1 Mrads/hr (1 kGy/hr), accuracies are as shown in the following table:

Total Integrated Dose (TID)	Output Code	Range Code	Background Radiation Effect
≤ 1Mrads	R & T <sup>(1)</sup>	ALL	±(0.1% URL + 0.15% span)
≤ 2Mrads	R & T <sup>(1)</sup>	ALL	±(0.2% URL + 0.3% span)

(1) With damping set for time response = 0.4 seconds or less

When exposed to an additional Total Integrated Dose (TID) of 110 Mrads (1.10 MGy), consisting of 2.0 Mrads/hr for 2 hr, 1.5 Mrads/hr for 4 hrs, and 1.0 Mrads/hr for 100 hrs, accuracies are as shown in the following table:

Total Integrated Dose (TID)	Output Code	Range Code	Accident Radiation Effect
≤ 30 minutes	R & T <sup>(1)</sup>	ALL	±(0.2% URL + 0.6% span)
≤ 60Mrads	R & T <sup>(1)</sup>	ALL	±(0.25% URL + 0.8% span)
≤ 110Mrads	R & T <sup>(1)</sup>	ALL	±(0.3% URL + 1.0% span)

(1) With damping set for time response = 0.4 seconds or less

**Steam Pressure/Temperature and Post DBE Operation**

During and after exposure to steam at the following temperatures and pressures (see Figure 4), concurrent with chemical spray for the first 48 hours:

435°F (223.9°C), 95 psig (655 kPa) for 3 minutes,  
365°F (185.0°C), 95 psig (655 kPa) for 7 minutes,  
320°F (160.0°C), 75 psig (517 kPa) for 8 hours,  
265°F (129.4°C), 24 psig (165 kPa) for 56 hours  
212°F (100.0°C), 0 psig (0 kPa) for 216 hours

Accuracies are shown in the following tables:

First 64 hours:

Output Code	Transmitter Type	Range Code	Steam Pressure/Temperature Effect
R & T <sup>(1)</sup>	3154ND & 3154NG	1	±(2.0% URL + 2.5% span)
		2-6	±(1.0% URL + 1.0% span)
	3154NA	3-4	±(3.0% URL + 3.0% span)
		5-6	±(1.0% URL + 1.0% span)

(2) With damping set for time response = 0.4 seconds or less

For 1 Year post-DBE following the first 64 hours:

Output Code	Transmitter Type	Range Code	Steam Pressure/Temperature Effect <sup>(1)(2)</sup>
R & T <sup>(3)</sup>	ALL	ALL	±(0.5% URL + 2.0% span)

(1) Test profile simulates one year post accident conditions at 120°F (48.9°C)

(2) Includes 14 days of full submergence in chemical spray solution at 130°F (54.4°C) and pressure of 50psig

(3) Output code T electronics with damping set for time response = 0.4 seconds or less

**Chemical Spray**

Chemical Spray began at time = 10 minutes of profile (see Figure 4) Duration of Chemical Spray was 24 hours. Chemical Spray was 0.28 molar boric acid, 0.064 molar sodium thiosulfate, and sodium hydroxide for initial pH of 11.0, and subsequent pH between 8.5 to 11.0, sprayed at a rate of 0.25 gal/min/ft<sup>2</sup>.

Figure 3 – Seismic Required Response Spectra (RRS)

Figure 4 – Steam Pressure/Temperature Profile

**Nuclear Cleaning**

Process wetted surfaces cleaned to <1ppm chloride content

**Hydrostatic Testing**

Hydrostatically tested to 150% of maximum working pressure for differential pressure transmitters.

Hydrostatically tested at the overpressure limit for gauge and absolute pressure transmitters.

All range code 1 transmitters tested to 2000 psi (13.79 MPa).

**Traceability**

Per 10CFR50 Appendix B, NQA-1, and ISO 9001:2008; chemical and physical certification of pressure retaining parts

**Qualified Life**

20 years at 120°F (48.9°C). Dependent on continuous ambient temperature at the installation location (see Figure 5).

Figure 5 – Qualified Life vs. Ambient Temperature

### Performance Specifications

Based on zero-based calibration spans under reference conditions.

#### Accuracy

Range Code	Accuracy
1-5	±0.2% of calibrated span
6	±0.25% of calibrated span

*Includes the effects of linearity, hysteresis, and repeatability.*

#### Drift

Range Code	Drift Effect per 30 months
1	±0.2% URL
2-6	±(0.1% URL + 0.1% span)

#### Temperature Effect

Range Code	Temperature Effect (per 100°F (55.6°C) Temperature Shift)
1	±(0.55% URL + 1.0% span)
2-6	±(0.15% URL + 0.6% span)
AP Range 3	±(0.6% URL + 0.5% span)
AP Range 4/5	±(0.25% URL + 0.5% span)

*This specification may be linearly interpolated down to 50°F (27.8°C) temperature interval.*

#### Overpressure Effect

Based on full overpressure limits:

- Range 1: 2000 psig (13.79 MPa)
- Range 2-5: 3626 psig (25.00 MPa)
- Range 6: 6000 psig (41.37 MPa)

#### 3154ND:

Range Code	Overpressure Effect	
	One-Sided	Two-Sided Sequential
1-3	±0.25% URL	±0.5% URL
4, 5	±0.3% URL	±2.0% URL

#### 3154NG and 3154NA:

Range Code	One-Sided Overpressure Effect
1-3	±0.25% URL
4-6	±0.3% URL

#### High Static Line Pressure Zero Effect (3154ND only)

The High Static Line Pressure Zero Effect can be calibrated out by the customer (see 3150 Series Reference Manual 00809-0100-4835 for additional information). If it is not calibrated out, the error associated with the High Static Line Pressure Zero Effect is as follows:

For high static line pressure (Ps) less than or equal to 2000 psi (13.79 MPa):

Range Code	High Static Line Pressure Zero Effect Ps ≤ 2000 psi (13.79 MPa)
1	±0.25% URL per 1000 psi (6.89 MPa)
2-5	±0.1% URL per 1000 psi (6.89 MPa)

*This specification may be linearly interpolated in 1000 psi (6.89 MPa) increments.*

For high static line pressure (Ps) greater than 2000 psi (13.79 MPa):

Range Code	High Static Line Pressure Zero Effect Ps > 2000 psi (13.79 MPa)
1	Not Applicable
2-5	±(0.2 + (0.2(Ps-2000 psi)/1000 psi))% URL

*This specification may be linearly interpolated in 1000 psi (6.89 MPa) increments.*

#### High Static Line Pressure Span Effect

##### 3154ND Ranges 1, 2 and 3:

Range Code	High Static Line Pressure Span Effect per 1000 psi (6.89 MPa)
1	±(0.4% URL + 0.4% span)
2, 3	±(0.1% URL + 0.1% span)

##### 3154ND Ranges 4 and 5:

Rosemount 3154ND ranges 4 and 5 experience a span shift when operated at high static line pressure. It is linear and correctable during calibration.

If no correction for the systematic High Static Line Pressure Span Effect is performed, the error is as follows:

Range Code	High Static Line Pressure Span Effect Error per 1000 psi (6.89 MPa)
4	-1.0% ± 0.2% input reading
5	-1.25% ± 0.2% input reading

If the correction procedure as outlined in the 3150 Series Reference Manual 00809-0100-4835 is applied, the remaining correction uncertainty for the High Static Line Pressure Span Effect for ranges 4 and 5 is as follows:

Range Code	High Static Line Pressure Span Correction Uncertainty per 1000 psi (6.89 MPa)
4, 5	±0.2% input reading

It is possible to improve the accuracy of the 3154ND at high static line pressure for applications requiring enhanced performance. Please contact RNII for additional information.

**Power Supply Effect**

Less than 0.005% of span / volt

**Load Effect**

Less than 0.0001% of span / ohm based on resulting change in terminal voltage to the transmitter.

**Electromagnetic Compatibility**

Satisfies requirements defined in:

- US NRC Regulatory Guide 1.180 Rev 1
- EN 61326-1:2006 and EN 61326-2-3:2006

**Mounting Position Effect**

No span effect; zero shift of up to 1.5 inH<sub>2</sub>O (0.37 kPa) which can be calibrated out.

**Functional Specifications**

**Service**

Liquid, gas, vapor

**Output**

4-20 mA

**Power Supply**

Maximum supply voltage

- 48 VDC

Maximum allowable supply voltage ripple

- less than 1 volt peak-to-peak ripple for ripple frequency less than or equal to 120 Hz

**Load Limits**

See Figure 6

**Dielectric Withstand Test**

707 VDC, 60 seconds, leakage less than 1 mA

**Insulation Resistance Test**

500 VDC, 60 seconds, IR greater than 100 MOhm

Figure 6 – Transmitter Supply vs. Load

# Rosemount 3154N

### Span and Zero Adjustments

External adjust; non-interacting for standard adjustments

### Zero Elevation, Zero Suppression

#### Maximum Zero Elevation

Zero is adjustable to the Lower Range Limit (LRL)

#### Maximum Zero Suppression

Zero is adjustable to 90% of the Upper Range Limit (URL) (80% for Range 1)

### Range Down

10:1 (5:1 for Range 1)

### Response Time

Time constant (63.2%) at 100°F (37.8°C)

### Output Code R:

Range Code	Fixed Time Response (Max)	
	DP / GP	AP
1	2.00 Sec	N/A
2	0.5 sec	N/A
3	0.2 sec	0.2 sec
4-6	0.2 sec	0.2 sec

### Output Code T (Adjustable Damping):

Range Code	Minimum Time Response in the Max Damping Position
1	2.00 sec
2-6	1.2 sec

Note: In the Minimum Damping Position, the values for Fixed Time Response apply.

### Temperature Limits

Normal Operating Limits:  
40°F to 200°F (4.4°C to 93.3°C)

Qualified Storage Limits:  
-40°F to 120°F (-40.0°C to 48.9°C)

### Humidity Limits

0 to 100% relative humidity (NEMA 4X)

### Enclosure Rating

NEMA 4X (IP 66)

### Volumetric Displacement

Less than 0.005 in<sup>3</sup> (0.082 cm<sup>3</sup>)

### Turn-On Time

2 seconds maximum

### Maximum Working Pressure

Larger of Static Line Pressure Limit or Upper Range Limit (URL)

### Pressure Ranges

Adjustable within the range shown; Upper Range Limit (URL) is the highest pressure shown

### 3154ND and 3154NG:

Range Code	Pressure Range
1	0-5 to 0-25 inH <sub>2</sub> O (0-1.25 to 0-6.23 kPa)
2	0-25 to 0-250 inH <sub>2</sub> O (0-6.23 to 0-62.3 kPa)
3	0-100 to 0-1000 inH <sub>2</sub> O (0-24.9 to 0-249 kPa)
4	0-30 to 0-300 psi (0-206.8 to 0-2068 kPa)
5	0-200 to 0-2000 psi (0-1379 kPa to 0-13.79 MPa)
6	0-400 to 0-4000 psi (0-2758 kPa to 0-27.58 MPa) <i>Range 6 not available on 3154ND</i>

### 3154NA:<sup>(1)</sup>

Range Code	Pressure Range
3	0-100 to 0-1000 inH <sub>2</sub> O abs (0-24.9 to 0-249 kPa)
4	0-30 to 0-300 psia (0-206.8 to 0-2068 kPa)
5	0-200 to 0-2000 psia (0-1379 kPa to 0-13.79 MPa)
6	0-400 to 0-4000 psia (0-2758 kPa to 0-27.58 MPa)

(1) Extended operation below 0.5 psia absolute pressure (3.5 kPa) is not recommended.

### Static Line Pressure Limits (3154ND only)

Range Code	Static Line Pressure Limit
1	0.5 psia to 2000 psig (3.45 kPa to 13.79 MPa)
2-5	0.5 psia to 3626 psig (3.45 kPa to 25.00 MPa)

### Overpressure Limits

Range Code	Overpressure Limit
1	2000 psig (13.79 MPa)
2-5	3626 psig (25.00 MPa)
6	6000 psig (41.37 MPa)

### Burst Pressure

Minimum burst pressure is 10,000 psig (68.95 MPa)

## Physical Specifications

### Materials of Construction

*Numbers in parentheses indicate where part is located in Figure 7*

#### Isolating Diaphragms (8)

316L SST

#### Drain/Vent Valves (10)

316L SST

#### Process Flanges (10)

CF3M (cast version of 316L SST)

#### Process Seal (C-rings) (9)

Silver-plated Inconel™ X-750

#### Electronics Housing O-rings (2)

Ethylene Propylene

#### Fill Fluid (8)

Silicone Oil

#### Sensor Module Housing (8)

CF3M (cast version of 316L SST)

#### Flange Bolts (11)

316 SST

#### Electronics Housing (5)

CF8M (cast version of 316 SST)

#### Mounting Bracket

CF8M (cast version of 316 SST)

#### Mounting Bolts (bracket to transmitter)

SAE J429 Carbon Steel, or 17-4 PH Stainless Steel (Optional)

### Process Connections

1/4-18 NPT (per EN 61518 / IEC 61518); 1/4 Swagelok® or 3/8 Swagelok®

### Electrical Connections

1/2-14 NPT conduit with screw terminals; M20-1.5, PG13.5, and G 1/2 threads are optional

### Weight

- 16.6 lbs (7.5 kg) (excluding bracket)
- 21.8 lbs (9.9 kg) (including SST panel mounting bracket)
- 25.1 lbs (11.4 kg) (including SST 2" pipe mounting bracket)

- (1) 3154NG Lower Range Limit (LRL) varies with atmospheric pressure.
- (2) Extended operation below 0.5 psia absolute pressure (3.5 kPa) is not recommended.
- (3) Customer assumes responsibility for qualifying interfaces on these options.
- (4) Qualification of the connector installation and instrument/connector interface is the responsibility of the end user.
- (5) Contact Rosemount Nuclear Instruments, Inc. for information regarding CDS.
- (6) Installation will be performed at Rosemount Nuclear Instruments, Inc. (RNII). Certification of the connector installation and instrument/connector interface will be provided by RNII.
- (7) Extended upper Range Limit varies by pressure range code. Please contact RNII for details.
- (8) The R1 option code cannot be combined with R4, R5 or R6 option codes.
- (9) Quantity is two for DP type transmitters and one for GP/AP type transmitters.

**Standard Accessories**

One instruction manual is included with each shipment.

**Calibration**

Transmitters are factory calibrated to the customer's specified range. If calibration is not specified, transmitters are calibrated at maximum range (0 to URL). Calibration is performed at ambient temperature and atmospheric pressure.

**Additional Customer Tagging Information**

Tagging is optional and will be provided when either option W1 or W2 is included in the model number. All tags are SST. The transmitter will be tagged in accordance with customer requirements (within space limitations defined below).

	<b>Permanent Tag (W1)</b>	<b>Wire-on Tag (W2)</b>
Nominal Character Height	0.10 in (2.54 mm)	0.188 in (4.76 mm)
Maximum Number of Lines	4	4
Maximum Characters per Line	14	20

**Special Options**

Please Contact Rosemount Nuclear Instruments, Inc (RNII) for special transmitter needs.

**Spare Parts**

A spare part list for the Rosemount 3154N pressure transmitter is located within the Rosemount 3150 Series Reference Manual 00809-0100-4835.

**Documentation**

**Certifications**

Certification will be provided for each Rosemount 3154N pressure transmitter for quality system, nuclear qualification, accuracy, special cleaning, hydrostatic testing, traceability, and special testing if applicable. Chemical and physical reports and identification of pressure-retaining parts will be on file at RNII.

**REVISIONS**

**Changes from Rev AC to Rev AD**

Page (Old)	Page (New)	Changes
Throughout	Throughout	Update document revision and implementation date.
10	10	Revised response time specification for pressure range 3 transmitters with output code R (all pressure types) from 0.25 sec to 0.2 sec.
10	10	Revised response time specification for pressure range 2-6 transmitters with output code T in the maximum damping position from 0.8 sec to 1.2 sec.
