

“Productivity
increased
the moment
we installed the
FIELDVUE DVC2000.”

You want increased plant productivity, now. The new Fisher® FIELDVUE® DVC2000 digital valve controller gives you results instantly. The DVC2000 is proven to decrease maintenance hours by installing quickly. And it gives excellent control, especially when combined with a Fisher control valve. Knowing this, your operator can move the set point for more throughput, higher quality and greater yield from your process. Plus the DVC2000 increases uptime by diagnosing valve faults on-line. It provides predictive intelligence via PlantWeb® digital plant architecture. And the DVC2000 offers a linkage-less, non-contact position sensor that eliminates wear parts and lost motion, helping ensure accurate, long-lasting control. FIELDVUE technology has the distinction of being used in over 500,000 instruments around the world. With just three bolts, two wires and the push of a button, you can increase plant productivity, now. Request a free brochure at www.Fisher.com.
