

Roxar Training Wetgas meter

Training Course Data Sheet

Connecting Technology, Knowledge and Experience

The Roxar state-of-the-art Wetgas meter (WGM) measures real-time flow rates of water, gas and condensate, providing operators with vital information for optimized reservoir and process management.

Best In-Class Training

Roxar's WGM Training course is designed to help you run your instrumentation with greater efficiency and productivity. Whether you are looking for installation specific training or generic / advanced product knowledge, Roxar's WGM course will help you operate, maintain and manage your system.

Roxar's WGM courses are approved by industry experts and reflect the rapidly advancing workflows used in the E&P industry to help you achieve peak process performance, greater uptime and profitability.

WGM Course Highlights

- In-depth instruction of meter operations and limitations
- Intricacies of the meter and the measurement technology
- PVT input and meter / system console upload instruction
- Detailed discussion on the calibration of the PT and DP transmitters
- Identification of installation specific maintenance recommendations
- Recognition of system alarms and reactive troubleshooting

Providing the training you need, when you need it, where you need it

Our global organisation is available to work with you in defining the appropriate subject matter and right approach to satisfy your training needs. Each year, hundreds of individuals attend courses at one of our regional training centres or participate in classes tailored to their particular needs and conducted locally at their facility. With all Roxar training courses, you can count on receiving quality education, regardless of location or method.

New Challenges, New Responses

Roxar's two day WGM training course is designed for those individuals responsible for the operation and maintenance of the meter. An experienced Roxar instructor will guide the participants through a detailed review of the operation, general maintenance and application of the instrument. The course will enable the participant to perform data analysis, routine maintenance, trouble shooting and fault finding without supervision.

Standard Training Course

The need for training is more critical than ever to achieving and maintaining cost-effective operations. Individuals can attend courses at one of our worldwide regional training centres or at their own facilities with a Roxar certified instructor.

Roxar's Standard Training Course is comprised of comprehensive educational modules:

Module 1 – Introduction to Wetgas Metering and Technology

Module 2 – Wetgas Measurement Technology

Module 3 – WGM Operations and Communication Protocols

Module 4 - Maintenance Recommendations and Diagnostic Troubleshooting

Roxar training courses enable users to operate their instrumentation at top efficiency and reduce long term operating costs through regular onsite maintenance.

Customised Training Course – Flexibility at your Disposal!

Roxar can develop a customised WGM training course that is tailored to your specific needs. We take the guess work and worrying about details out of the equation and develop a program to suit your specific requirements.

On-Site, Practical Training

Participants will receive practical, hands-on experience using Roxar's WGM with a Certified Service Engineer. Mentoring shall take place during a normal working shift at your facility whilst focusing on operation and maintenance of the instrumentation.
