

“We needed to protect our
compressor with the most reliable
and precise technology.

We chose the Fisher Optimized Antisurge Valve.”

Fisher and FIELDVUE are marks owned by one of the companies in the Emerson Process Management business division of Emerson Electric Co. The Emerson logo is a trade mark and service mark of Emerson Electric Co. All other marks are the property of their respective owners.

Emerson's Fisher® Optimized Antisurge Valve is designed specifically for the rigors of compressor surge control. It integrates the valve, its actuator and an antisurge FIELDVUE® digital valve controller into a high-speed, highly accurate and reliable answer to surge control needs.

Fast—Full stroke in less than 1 second

Stable—Actuator air cushions absorb shock at end of valve stroke

Accurate—Better than 0.25% positioning accuracy

Quickly commissioned—Takes only minutes, not hours

Reliable—FIELDVUE performance diagnostics help assure valve availability

These advantages (and there are more) let you move the compressor operating point closer to the surge line for a significant saving in operating costs and a significant boost in operating efficiencies.

Contact your local Emerson Process Management sales location for detailed information. Or better yet, ask about a live demonstration of the Fisher Optimized Antisurge Valve.
