Anywhere in your facility from the service entrance to the most critical production equipment, SolaHD can power your process control applications with our power conversion and power quality products.

SolaHD offers industrial grade products to meet the most demanding applications worldwide.

- Factory automation
- Inspection, test and instrumentation equipment
- Laboratory and non-patient medical
- High efficiency applications (Energy Star®)
- UL508 environments such as waste water treatment
- Harsh environment and remote site locations
- Building automation
- Service automation
- Process control

Automotive/Industrial Control

SolaHD offers many products suited for harsh environments including our encapsulated power supplies and transformers. We also offer a wide range of Class 1 Division 2 products.

## When Power Is Money

Power is a dynamic aspect in production and automation. Companies lose billions of dollars every year due to voltage sage and power outages.

Conditioning your incoming power keeps productivity high and costs down. Using compatible power conversion components ensures your system reliability.

## Power Is Our Only Business

Our industrial power specialists are serious about your system performance. SolaHD has been a trusted name in power conversion and power quality since 1915. We provide innovative and reliable products with proven technologies to help control your equipment or facility's efficiency, productivity, and longevity. Our products meet strict global requirements and new efficiency standards. SolaHD delivers total power quality solutions to drive your system reliability, your return on investment (ROI) and your customer satisfaction.

Power Products (14.4 watts to 500 kVA)

## Consider the Entire Picture

SolaHD draws upon nearly 100 years of global experience in developing innovative solutions to optimize operational performance, improve efficiencies, preserve data and increase equipment longevity. Our comprehensive line of products stretch from entrances to load points to communications networks throughout facilities, making our total power quality solutions indispensable to today's industries.

Total power quality involves both power protection and power conversion. Power conversion choices made upstream can impact the type of power protection required downstream. Only SolaHD's products and expertise can save you time, money and space with combined power protection and conversion solutions that are right for your facility.

## Power Supplies

Power Supplies and Uninterruptible Power Supplies provide clean, consistent power. Both products safeguard equipment from power anomalies, such as fluctuations through complete power failures. Power Supply and UPS systems can also offer power conditioning benefits by filtering noise, harmonics and

SolaHD is at work for you on the facility floor, branch panel, power distribution points and point-of-use applications.
Our products power the most demanding applications and environments and can be used in conjunction or alone to ensure controlled, reliable power at any part of the factory floor or machinery.

|  | Non-linear loads |
| Effects | Variable frequency drives  <br>  Holtage distortion neutral current <br> Sreaker tripping  <br> Solution Loss of system capacity <br> K-Factor Transformers <br> UPS <br> Power Conditioner |

## Power Solution Flow Charts

We have provided some quick charts below to help migrate through our product catalog. Your specific application and environment will always determine the most suitable product. The following is a guide to help you determine the type of application you have.

## Power Quality

SolaHD provides a broad array of power quality products to fit your application and your budget. SolaHD's most relied upon industrial power quality solution, the voltage regulating power conditioner, is complemented by many surge, filter, UPS (Standby) and UPS (Online) options.

Our solutions can be divided into two main categories:

- Power Conversion - Manipulating AC or DC power to another state.
- Power Quality - Regulate, isolate, filter, protect or backup AC or DC power.

Whether you are protecting your expensive equipment, backing up power for outages or sags, or delivering clean, safe power to your sensitive devices for maximum productivity, SolaHD can provide the solution. Many of these products can be used in combination in your system or across your facility to provide a complete solution.

## Power Conversion

SolaHD offers a broad range of standard products to meet almost all of your industrial AC-AC, AC-DC, and DC-DC needs. DIN Mount, chassis and rackmount products are offered in many conversion topologies to meet your exact mounting and performance requirements.

SolaHD products are differentiated by industrial performance ratings such as wide temperature ratings, high MTBF, lack of fans in designs, continuous short circuit capabilities, high densities, and rugged packaging. Global specifications and high efficiency designs make industrial system design easy.

## 2/50 Voltage Wave

Voltage surge with a virtual front time of 1.2 ms and a time to half-value of 50 ms delivered across an open circuit.

## 8/20 Current Wave

Current surge with a virtual front time of $8 \mu \mathrm{~s}$ and a time to halfvalue of $20 \mu s$ delivered into a short circuit.

## AC (Alternating Current)

Current that reverses direction in response to voltage that is changing polarity.

## AC Power Interface

The electrical points where an SPD is electrically connected to the AC power system.

## Active Tracking ${ }^{\circledR}$ Filter

A Surge Suppressor/Electrical Noise filter device, that suppresses both transient and Low voltage electrical noise found on the AC line.

Active Tracking ${ }^{\circledR}$ Filter Plus:
A device that both divert or clamp high amplitude transients, and attenuate lowenergy, high frequency noise.

## Air-Cooled

A product cooled by the natural circulation of air.

## Ambient Noise Level

The sound level of the area measured in decibels.

## Ambient Temperature

The temperature of the air surrounding a product.

## Ampacity

The current-carrying capacity of an electrical conductor or device.

## Ampere

The practical unit of electric current.

## Attenuation

Decrease in signal voltage or power.

## Autotransformer

A transformer in which part of one winding is common to both the primary and secondary circuits associated with that winding.

## Banked

Two or more transformers connected together to increase kVA.

## Basic Impulse Level (BIL)

A measure of the ability of the insulation system to withstand very high voltage surges. For example, a 600-volt class transformer has a 10 kV BIL rating.

## Battery Run Time

The amount of time (in minutes) a battery system can support a load.

## Blackout

Slang term for the total loss of electrical power for more than one minute.

## Breakdown Voltage

The maximum AC or DC voltage which may be applied from input to output and/or chassis of a power supply. See Hi-Pot.

## Brownout

Slang term for an extended voltage reduction (more than a few cycles) of more than $10 \%$.

## Bypass

A mechanical or electronic switch to provide an alternate path for the line current.

## CBEMA

An acronym for Computer and Business Equipment Manufacturers Association. Replaced by the Information Technology Industry Council (ITIC).

## CE Mark

(Conformité Européenne) A marking that shows the product meets the fundamental safety, health, environmental and consumer protection requirements of the European Community.

## Chassis

The metal framework or case in which an electrical circuit or system is constructed.

## Combination Wave

Also called combination surge. A surge delivered by a generator which has the inherent capability of applying a $1.2 / 50 \mathrm{~ms}$ voltage wave across an open circuit and delivering an $8 / 20 \mathrm{~ms}$ current wave into a short circuit. The exact wave that is delivered is determined by the generator's fictive impedance.

## Common-Mode Noise

Noise that occurs between the current carrying conductors and ground.

## Compensated Transformer

A transformer with a turn's ratio which provides a higher rated voltage at no-load and rated voltage at rated load. Normally used on units rated 2 kVA or smaller.

## Constant Current Power Supply

A power supply that regulates its output current for changes in line, load, ambient temperature, and time.

## Constant Voltage Power Supply

A power supply that regulates its output voltages for changes in line, load, ambient temperature and time.

## Constant Voltage Transformer (CVT)

A power conditioner that provides a stable and regulated sinewave output voltage.

## Continuous Duty

The service requirement that demands operation at a constant load for an indefinite period of time.

## Control Transformer

Usually referred to as an Industrial Control transformer. Designed for good voltage regulation characteristics when low power factor and /or large inrush currents are drawn ( 5 to 15 times normal).

## Conductor Losses

Losses in the transformer winding that are incidental to the carrying of the load. These losses include those due to resistance as well as to stray and eddy currents.

## Core

The steel that carries the magnetic flux in a transformer.

## Core Loss

Losses caused by a magnetization of the core.

## Crest Factor

The ratio of the peak value and RMS value of a voltage or current waveform.

## Cross-Regulation

In a multiple output power supply, the percent voltage change at one output caused by the load change on another output.

## Crowbar

An overvoltage protection circuit which rapidly places a low resistance shunt across the power supply output terminals if a predetermined voltage is exceeded.

## CSA

Canadian Standard Association

## Current Limiting

See Output Current Limiting.

## DC

(Direct Current) Current that flows in only one direction.

## Decibel (db)

A unit used to express the magnitude of a change in signal or sound level, either an increase or decrease.

## Delta Connection

A method used for connecting the three windings of a threephase transformer (or three single-phase transformers). The windings are connected in series, the three-phase supply being taken from or supplied to the junctions.

## Delta-Wye

The method of connection for both primary and secondary windings of a three-phase transformer bank.

## Derating

The specified reduction in an operating parameter to improve reliability.

## Differential Mode Noise

Noise that occurs between the current carrying conductors.

## DIN Rail

A standard rail (typically 35 mm wide) that mounts to the chassis and allows other electrical components to be installed and replaced easily.

## Distribution Transformer

Any transformer rated between 3 and 500 kVA and a primary voltage of 601 volts or less.

## Double Conversion UPS

See On-line UPS

## Double Wound Transformer

A transformer with double wound coils on both the primary and secondary.

## Drift

The change in output voltage of a power supply over a specified period of time, following a warm-up period, with all other operating parameters such as line, load, and ambient temperature held constant.

## Drive Isolation Transformer

A transformer designed to withstand the additional heat and mechanical stress caused by $D C$ drives.

## Dry Type Transformer

A transformer cooled by a medium other than a liquid, usually through the circulation of air.

## Dual Wound Coils

Two part windings that can be connected in series or parallel to adjust the voltage or current.

## Dynamic Load Regulation

The ratio of change in output voltage to change in load current.

## Eddy Currents

Additional currents caused by a magnetic field.

## Efficiency

A measure of energy loss in a circuit.

## Electronic Tap Changing Regulator

An electronic switching system used to adjust for changes in line voltage to maintain the output voltage within acceptable levels.

## Electrostatic Shield

A grounded conductor placed between the primary and secondary winding to greatly reduce or eliminate line-toline or line-to-ground noise. Often referred to as a "Faraday shield".

## EMC

(Electromagnetic Compatibility) A directive necessary to get the CE Mark, which shows the electrical device will not create high levels of EMI and will not fail due to normal levels of EMI.

## EMI

See Noise/Electrical Noise.

## Encapsulated

A method of sealing a device with epoxy to resist environmental effects.

## ESR

Equivalent Series Resistance. The amount of resistance in series with an ideal capacitor which exactly duplicates the performance of a real capacitor.

## Excitation Current

The steady rate current that keeps the transformer energized after the inrush has dissipated, with all other windings open- circuited. Also called "magnetizing" or "no-load current."

## Faraday Shield

See Electrostatic Shield.

## FCAN and FCBN Taps

Acronyms for Full Capacity
Above Normal and Full
Capacity Below Normal.

## Ferroresonance

A method of producing a constant voltage by use of a special saturated transformer. Invented and patented by Joseph Sola in 1938.

## Ferroresonant Power Supply

A stabilized power supply (CVDC) driven by a constant voltage transformer.

## Filter

A device that reduces unwanted electrical noise.

## FL

Full-load

## Flyback Converter

A power supply switching circuit which normally uses a single transistor. During the first half of the switching period the transistor is on and energy is stored in a transformer primary; during the second half period this energy is transferred to the transformer secondary and the load.

## Foldback Current Limiting

A power supply output protection circuit whereby the output current decreases with increasing overload, reaching a minimum at short circuit.

## Force Air Cooled

A means of accelerating heat dissipation to lower the temperature rise of an electrical device.

## Forward Converter

A power supply switching circuit in which energy is transferred to the transformer secondary when the switching transistor is on. In this circuit minimal energy is stored in the transformer.

## Frequency (Hertz)

Cycles per second.

## Full Bridge Rectifier

A power switching circuit in which four diodes are connected in a bridge configuration.

## Ground Loop

The condition of having two or more ground references in a common system.

## Half Bridge Rectifier

A power switching circuit similar to the full bridge converter except that only two diodes are used.

## Harmonics Distortion

The distortion of the AC waveform due to the addition of sinewaves of different frequencies being added to the AC voltage.

## Hi-Pot Test

High Potential Test. A test to determine if the breakdown voltage of a transformer or power supply exceeds the minimum requirement.

## Holdup Time

The length of time a power supply's output voltage remains within specifications following the loss of input power.

## Impulse

A high amplitude, short duration spike (milliseconds) superimposed on the normal voltage or current.

## Input Line Filter

A low-pass or band-reject filter at the input of a power supply which reduces line noise fed to the supply. This filter may be external to the device.

## Input Voltage Range

The high and low input voltage limits within which a device meets its specifications.

## Inrush Current

The peak instantaneous input current drawn by a device at turn-on.

## Inrush Current Limiting

A circuit which limits the inrush current during turn-on of a device.

## Inverter

A power converter that changes DC input power into AC output power.

## Isolation Transformer

A transformer in which the input winding and the output winding are not electrically connected.

## Isolation

The electrical separation between input and output of a circuit.

## Isolation Voltage

The rated AC or DC voltage which may be continuously applied from input to output and/or chassis of a device. See Hi-Pot.

## kVA Rating

A measurement of apparent power. $1 \mathrm{kVA}=1000 \mathrm{VA}$.

## KW Rating (kilowatts)

A measurement of real power delivered to a load $1 \mathrm{KW}=$ 1000 VA x Power Factor

## Leakage Current

The AC or DC current flowing from input to output and/or chassis of an isolated device at a specified voltage.

## Line Regulation

The change in output voltage due to a variation in input voltage.

## Linear Power Supply

A power supply that uses a control device, like a transistor, in series (or parallel) with the load. The control device adjusts the effective resistance to give a constant voltage output.

## Linear Regulator

See Linear Power Supply.

## Load Regulation

The change in output voltage due to a variation in load.

## Local Sensing

Using the power supply output voltage terminals as the sense points to provide feedback to the voltage regulator.

## Low Voltage Transients

High frequency noise

## LVD

Acronym for Low Voltage Directive. A European Community directive which shows the device is not a shock or fire hazard.

## Maximum Continuous Operating Voltage (MCOV)

The maximum designated rootmean-square (rms) value of the power frequency voltage that may be continuously applied to the mode of protection of an SPD.

## Modes of Protection

Electrical paths where the SPD offers defense against transient overvoltages. Examples include Line to Neutral (L-N), Line to Ground (L-G), Line to Line (L-L) and Neutral to Ground (N-G).

## MOV

Acronym for Metal-OxideVaristor. A voltage sensitive device used to limit overvoltage conditions on AC power and data lines.

## MTBF

Acronym for Mean Time Between Failure. The statistical failure rate of a device.

## Noise/Electrical Noise

Also called electromagnetic interference, or EMI. Unwanted electrical signals that produce undesirable effects and otherwise disrupt the control system circuits.

## Nominal Value

The stated or objective value for a quantity.

## Normal Mode Noise

See Differential Mode Noise.

## Off-Line UPS

A UPS where the inverter is normally off until there is a power failure. Also known as a Standby UPS.

## On-Line UPS

A UPS where the inverter is always powering the load. AC is converted to DC to charge the battery then $D C$ is converted to AC to power the load. On-Line UPS are often referred to as a "Double Conversion UPS".

## Output Current Limiting

An output protection feature which limits the output current to a predetermined value in order to prevent damage to the device under overload conditions.

## Output Voltage

The nominal value of the voltage at the output terminals of a device.

## Overload Protection

See Output Current Limiting.

## Overshoot

A transient change in output voltage, in excess of specified output accuracy limits, which can occur when a power supply is turned on or off, or when there is a step change in line or load.

## OVP

Acronym for Overvoltage Protection. A power supply feature which shuts down the supply, or crowbars or clamps the output, when its voltage exceeds a preset level.

## Parallel Operation

The connection of the outputs of two or more identical devices to obtain a higher output power.

## PARD

Acronym for Periodic and Random Deviation. A term used for the sum of all ripple and noise components measured over a specified band width and stated in either peak-to-peak or RMS values.

## PE

Acronym for Protective
Earthing. The incoming earthing conductor provided by the utility.

## PI Filter

A commonly used filter at the input of a switching supply or DC/DC converter to reduce reflected ripple current. The filter usually consists of two parallel capacitors separated by a series inductance and is generally built into the supply.

## Post Regulator

A linear regulator used on the output of a switching power supply to improve line and load regulation and reduce output ripple voltage.

## Power Boost ${ }^{T M}$

Describes the advanced overload capability of the SDN and SDP power supplies to power high inrush loads without oversizing.

## Power Factor

The ratio of true power Watts) to apparent power (VA).

## Power Fail Detection

A power supply option which monitors the input voltage and provides an isolated logic output signal when there is loss of line voltage.

## Pre-regulation

The regulation at the front-end of a power supply, generally by a type of switching regulator, this is followed by output regulation, either by a linear or switching type regulator.

## PWM Inverter

Acronym for Pulse Width Modulation. An efficient method of creating sinewave power.

## Push-Pull Converter

A power switching circuit which uses a center-tapped transformer and two power switches which are driven on and off alternately. This circuit does not provide regulation by itself.

## Rated Output Current

The continuous load current that a device was designed to provide.

## Rectification

The conversion of alternating current to direct current.

## Redundancy

The addition of extra devices to provide a backup in the event of the loss of one of those devices.

## Remote Sensing

The ability for a power supply to sample the load voltage located a distance away, and adjust for the resulting voltage drop.

## Return

The name for the common terminal of the output of a power supply; it carries the return current for the outputs.

## Reverse Voltage Protection

A feature which protects a power supply against a reverse voltage applied at the input or output terminals.

## Ripple

A small AC voltage on the DC output of a power supply that remains after filtering.

## Ripple and Noise Pertibations

Small AC voltage on the output of a DC power supply at a specified bandwidth. This is the result of feed through of the rectified line frequency, internal switching transients and other random noise.

## Sag

A temporary drop in the RMS voltage, which may last from one cycle to a few seconds.

## Short-Circuit Protection

A feature which protects the device from a short-circuit so that the device will not be damaged.

## SNMP

Acronym for Simple Network Management Protocol. A standard for LAN management messaging and control of network devices and their functions.

## Soft Start

A feature which limits the start-up switching currents of a switching supply and causes the output voltage to rise gradually to its final value.

## SPD

Surge Protective Device. Divert or clamp high amplitude transients.

## Standby UPS

See Off-Line UPS.

## Static UPS

See On-Line UPS.

## Step-Up/Step-Down

 TransformersA transformer that either increases or decreases the input voltage.

## Swell

A temporary increase in the RMS voltage, which may last from a half cycle to a few seconds.

## Switching Frequency

The rate at which the voltage is switched in a DC-DC converter or switching power supply.

## Switching Regulator

A high efficiency circuit used to regulate output voltages.

## Switchmode Power Supplies (SMPS)

A power supply that uses a switching regulator.

## Temperature Coefficient

The average percent change in output voltage per degree Centigrade change in ambient temperature over a specified temperature range.

## Temperature Range, Operating

The ambient temperature range within which a device may be safely operated and meets its specifications.

## Temperature Range, Storage

The ambient temperature range within which a device may be safely stored, non-operating, with no degradation in its subsequent operation.

## Thermal Protection

An internal safeguard circuit that shuts down the unit in the event of excess internal temperatures.

## THD

Acronym for Total Harmonic Distortion. The ratio of the harmonic content to the fundamental frequency expressed as a percent of the fundamental.

## Transfer Time

The amount of time a device takes to switch from one mode of operation to another.

## Transformer

An electrical device that changes AC voltage from one level to another.

## Transformer Turns Ratio

The ratio of primary turns to secondary turns.

## Transient

A high amplitude, short duration (milliseconds) spike superimposed on the normal voltage or current. Sometimes called a spike or a surge.

## Transient Recovery Time

The time required for the output voltage of a device to settle within specified output accuracy limits following a step change in output load current or a step change in input voltage.

## Transverse Mode Noise

See Differential Mode Noise.

## TVSS

Transient Voltage Surge Suppressor. Also known as SPD

## UL

Acronym for Underwriters Laboratories tested.

## UL Recognized

Designation given to components that when used properly in an end product are deemed to be safe.

## UL Listed

Designation given to products ready for end use.

## Undervoltage

## See Brownout.

## UPS

Acronym for Uninterruptible Power Supply. A device which supplies power to the critical load when the existing AC line voltage is not within normal operating values, or fails completely.

## VA

Acronym for Voltamp. A measure of power. $1000 \mathrm{VA}=$ 1 kVA.

## VFD

Variable Frequency Drive.

## Voltage Balance

The difference in magnitude, in percent, between the two output voltages of a dual output power supply where the voltages have equal nominal values with opposite polarities.

## Warm-Up Drift

The initial change in output voltages of a device from turn-on until it reaches thermal equilibrium.

## Warm-Up Time

The time required, after initial turn-on, for a device to meet its performance specifications.

Surge Protective Devices and Active Tracking ${ }^{\circledR}$ Filtering

Today's industries depend on their telecommunication, networking, computing and production equipment for optimized manufacturing performance. SolaHD's proven surge protection and filtering devices protect these critical operations across facilities from the continuous threat of transient spikes, noise and harmonic distortion.

Employing an entire facility protection strategy will safeguard the electrical system against most transients. Multi-stage protection involves clamping the initial high energy surge, filtering any remaining noise or transients to the protected sensitive equipment and finally, protecting the data/signal lines entering or leaving the control panel or the factory floor. This coordination of devices provides the lowest possible let through voltage to the equipment to ensure maximum productivity.

## Surge Protective Devices

High-energy transients either externally or internally generated pose an immediate threat to the reliability and performance of your sensitive electronic equipment. SolaHD recommends placing high-energy Surge Protective Devices (SPDs) on key panels throughout your facility. Within your facility, motors, inductive loads and various equipment load switching can cause damage or costly downtime.

Our surge protective devices focus on limiting high-voltage spikes to a level that is acceptable to most electronic equipment. Plus, they're a great first line of defense, using components that are placed in parallel with the line and serve as clamping mechanisms for high-energy impulses. Protection at this level is referred to in the industry as Sine Wave Tracking or electronic grade. Surge Protective devices are typically installed at service entrances, on larger distribution panels and at the point of use.

## Active Tracking ${ }^{\circledR}$ Filtering with Surge Protection

Low-energy transients and high-frequency noise are the primary causes for system disruption and long-term degradation of microprocessor-based equipment within your facility. For more than 30 years, our Active Tracking Filters have proven to be the most effective solution in critical equipment protection within harsh industrial environments. Active Tracking Filters are built upon a unique multi-stage hybrid design. This design creates a foundation for a family of products that attenuate impulses that would normally go untouched by standard, parallel clamping devices.

Changing technology and dependence on total automation processes within modern facilities create a critical need for clean AC power at the equipment level. Active Tracking Filters are a perfect solution for your microprocessor-based products, including industrial PLCs, OEM applications and motion control systems.

## Data/Signal Line Surge Protection

The rapid development of automated controls, telecommunications and fire/alarm/security systems make it imperative to have properly coordinated low-voltage surge protection. Modern networked industrial facilities require error-free transmission of information for maximum productivity and integrity of data, but these areas are often overlooked when it comes to power protection.

The need to protect all susceptible low-voltage cable routes entering a facility and at key points within the building is as critical as protecting the equipment from high-energy impulses. The importance of protecting at this level grows as your facility's reliance on sensitive instrumentation, networked automation, and uncorrupted data transmission increases. Our Data/Signal Line products utilize high-speed, high-energy components that come in a variety of voltage levels and unique packaging configurations.

## STV 200/400K Series - Surge Protective Devices

SolaHD STV 200/400K Series offers continuous protection from damaging voltage transients and electrical noise commonly found at the service entrance or distribution panel. The modular design of the STV 200/400K allows for installation flexibility and its' robust design allows for installation in the most severe exposure locations. They are capable of handling the high-impulse, potentially damaging transients commonly found at the service entrance or distribution panels. The modular design of the STV 200/400K allows for installation flexibility. Its robust design allows for placement in the most severe exposure locations.

The STV 200/400K utilizes circuitry to monitor the status of all protection modes, including neutral to ground. Should protection be unavailable in any mode, the Green LED will be extinguished, and the Red LED will be illuminated. In addition, high isolation form C dry contacts provide remote monitoring of protection system failure, under voltage, phase and power loss. The STV 200/400K protection integrity monitoring indicates failure for both shorted or opened protection components.

These devices are built to meet your unique requirements, and are available in hardwire, three phase configuration. They are designed for years of trouble free operation and require little or no operator intervention after installation.

## Applications

The STV 200/400K Series can be a facility-wide product family and may be installed from service entrances to distribution panels to branch panels.

- Industrial Plants
- Commercial Buildings
- Institutional Facilities
- Any facility that has an environment with electronics based equipment

## Features

- Modular design allows for flexibility
- Surge current capacity of 200 to 400 kA per phase
- Industry's highest surge current repeatability
- All modes transient protection (L-N, L-G, and N-G)
- Form C dry contacts and audible alarm status indications
- Internal/external monitoring, including neutral to ground
- EMI/RFI Filtering
- Five year limited warranty

- Custom options (contact technical support)
- NEMA 12 enclosure, NEMA 3R, 4, and 4X
- Optional rotary disconnect, transient counter and remote monitor panel

## Certifications and Compliances

- (1L) Listed
- UL 1449, Type 1 locations
- UL rated 200 kA with component level fusing for safe operation
- (IL) Listed/NEMA type 12 enclosure; 3R, 4, 4X available
- ANSI/IEEE C62.11, C62.41, C62.45

Categories A, B, and C3 tested

- Tested to NEMA LS1, ISO 9001

## The STV 100K Series - Surge Protective Devices

SolaHD's STV 100K hardwired surge protective devices are designed for installation at the service entrance, branch panel or a dedicated sensitive electronic load. These units feature all mode protection, LED and audible alarm status indication, sinewave tracking and form "C" dry contacts. The STV 100K series also contains the highest levels of safety built into the product including thermal fusing and a short circuit current protection rating of 100kA.

## Applications

- Distribution Panels (<1200 A)
- Branch, Lighting and Control Panels
- Factory Automation Installations
- Dedicated Industrial Equipment

## Features

- 100,000 amp peak current rating provides all mode protection against severe transients
- Low clamping levels for more effective protection
- LED status and audible alarms
- Compact, rugged metal

## Certifications and Compliances

- © UL Listed
- UL 1449, type 2 locations
- (UL) Listed/NEMA type 12 enclosure
- CSA C22.2 No. 8, CSA TI I-IIB, TI A-24
- ABS Type Approved
- RoHS Compliant

## The STV 25K DIN Rail Series - Surge Protective Devices

This series provides point-of-use protection, at the dedicated equipment level, against damaging transients. Ideal for installation in electronic control cabinets found in harsh industrial environments such as the factory floor or at remote locations. These devices provide $25,000 \mathrm{amps}$ of surge protection, sinewave tracking, LED status indication and form "C" dry contacts. This DIN Rail series also provides protection on all electrical paths and comes with a standard ten year product warranty.

## Applications (20 Amp Max)

- Control Cabinets for Industrial Automation
- Point-of-Use Industrial/Service Equipment
- Remote Commercial or Industrial Equipment
- Instrumentation and Large Test Equipment
- Commercial and Building Automation Systems

## Features

- Compact and narrow design maximizes panel space.
- Low clamping levels for more effective protection.
- Easy access terminal screws for quick mounting and installation.
- 25,000 amps of surge protection.
- Sine wave tracking and all mode protection provide consistent and reliable protection on all electrical paths.
- Thermal fusing prevents MOV overheating caused by excessive current levels.

## Certifications and Compliances

- ${ }^{\mathbf{7}} \mathbf{I}_{\text {us }}$ UL Recognized Component
- UL 1449, type 2CA
- UL 1283
- ABS Type Approved
- RoHS Compliant

## Related Products

## STF Series - Active Tracking ${ }^{\circledR}$ Filters

Low voltage/high frequency noise is caused by everyday events such as turning on machinery, motors, or equipment. Although noise is less dramatic than high voltage transients, the long term effects of these frequent disturbances can be as damaging. Filtering systems such as SolaHD Active Tracking ${ }^{\circledR}$ Filters provide clean AC power by eliminating lower voltage noise.

The SolaHD STF Series offers the original active tracking technology to guard against commonly occurring but very damaging, lower energy transients. Offering excellent noise reduction, the filter continuously tracks the input AC power line and responds instantly upon detecting extraneous high frequency noise.

The STF Series eliminates low voltage/high frequency noise via a low-pass or L-C filter. These filters are used for low energy, high frequency noise reduction and consist of a series of inductors, capacitors and resistors. STFs are load dependent which means that the series inductors located on each phase and neutral conductors are sized to handle the maximum current draw on the line. These inductors together with the capacitors and resistors form a circuit capable of absorbing a large bandwidth of noise.

These devices are designed to meet UL 1283, and CSA C22.2 No. 8 for Electromagnetic Interference Filters. STFs attenuate or reduce the amplitude of noise to a minimum of 40 dB that occurs in a frequency range of 50 KHz to 50 MHz . They also provide the industry's best IEEE Category "A" protection, typically reducing normal mode transients to $+/-5$ volts.

Built to meet your unique requirements, these filters are available in a multitude of voltage configurations. They are hardwired and designed for years of trouble free operation requiring little or no operator intervention after installation.

Active Tracking ${ }^{\circledR}$ Filters are one part of a total power quality solution. They can be used alone or in conjunction with other SolaHD products to solve more complex power quality problems.

## Applications

- Branch and Control Panels
- Factory Automation Installations
- Point of Use Industrial Service Equipment
- Dedicated Industrial and Machine Tools Equipment
- Telecommunications Equipment

## Features

- Non degrading, series filter technology for total durability
- High frequency noise filter, RLC low-pass filter
- Three phase applications up to 200 Amp
- Attenuates noise to 40 dB in frequency range of 50 kHz to 50 MHz
- Operating temperature from $-40^{\circ} \mathrm{C}$ to $+45^{\circ} \mathrm{C}$.
- Hardwired connection
- MTBF greater than 100,000 hours, Mil Std. 217F
- Ten year limited warranty

## Certifications and Compliances

- (ULUs Listed
- UL 1283
- CSA C22.2 No. 8
- RoHS Compliant

## Related Products

- Power Conditioners
- Uninterruptible Power System
- Power Supplies

## STFV Plus Series - Active Tracking ${ }^{\circledR}$ Filtering with Surge Protection

The SolaHD STFV Plus Series combines Active Tracking ${ }^{\circledR}$ filtration for low energy noise and surge protection for high energy transients. It continuously tracks the input AC power line responding instantly into action upon detecting extraneous high frequency noise and high voltage transients caused by everyday events such as turning on machinery, motors, or equipment.

These devices are designed to meet UL 1283 for Electromagnetic Interference Filters. STFV Plus attenuates or reduces the amplitude of high frequency noise to a maximum of 90 dB that occurs in a range of 100 kHz to 50 MHz . STFV Plus provides the industry's best IEEE C62.41 Category "A \& B" Ringwave protection.

They are built to meet your unique requirements, and are available in hardwired, single phase configuration. They are designed for years of trouble free operation and require little or no operator intervention after installation.

Active Tracking ${ }^{\circledR}$ Filters Plus is one part of a total power quality solution. They can be used alone or in conjunction with other SolaHD products to solve more complex power quality problems.

## Applications

- Branch and Control Panels
- Factory Automation Installations
- Point of Use Industrial Service Equipment
- Programmable Logic Controllers
- Dedicated Industrial and Machine Tools
- Telecommunications and IT Equipment

## Features

- Non degrading, series filter/TVSS technology for total durability
- UL surge current capacity - 25,000 amps
- High impact plastic case, epoxy encapsulated enclosure
- Transient protection in all modes (L-N, L-G, and N-G)
- Single phase applications up to 30 amp
- Operating temperature from $-40^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$
- Hardwired connection
- LED power indication
- Ten year limited warranty

## STFE Elite Series - Active Tracking ${ }^{\circledR}$ Filters with Surge Protection

The SolaHD STF Elite DIN Rail Mount Series combines Active Tracking ${ }^{\circledR}$ technology with UL Listed surge protection to protect against the full spectrum of voltage transients and surges. It continuously tracks the input AC power line responding instantly into action upon detecting extraneous high frequency noise and high voltage transients caused by everyday events such as turning on machinery, motors, or equipment.

The STFE Series attenuates or reduces the amplitude of normal mode noise to a minimum of 90dB that occurs in a frequency range of 100 KHz to 50 MHz , and common mode noise to a minimum of 60dB that occurs in a frequency range of 5 MHz to 50 MHz . STFE provides the industry's best IEEE C62.41 Category "A \& B" Ringwave protection.

They are built to meet your unique requirements, and are available in hardwired DIN Rail mount, single phase configuration. They are designed for years of trouble free operation and require little or no operator intervention after installation.

## Applications

- Control Panels
- Factory Automation Installations
- Point of Use Industrial Equipment
- Programmable Logic Controllers
- Dedicated Industrial and Machine Tools Equipment

## Features

- Series connected DIN Rail mounted filter
- Durable metal mount clip
- UL Listed surge current capacity - 45,000 Amps
- Transient protection in all modes (L-N, L-G, and N-G)
- Single phase applications up to 20 Amp
- Operating temperature from $-40^{\circ} \mathrm{C}$ to $+50^{\circ} \mathrm{C}$
- Screw terminal connections
- Reliable and convenient screw clamp connections
- Accept 10-16 AWG wire
- Meet IP20 specifications for ingress protection
- LED status indication
- Form C contact for remote monitoring
- Five year limited warranty

## Certifications and Compliances

- $\boldsymbol{\#}$ us UL Recognized Component
- UL 1449, Type 4 locations
- UL 1283
- CSA C22.2 No. 8
- CE - EN 61643-11:2002
- ABS Type Approved
- RoHS Compliant

## Related Products

## STC Series - Data/Signal Line Surge Protection Devices for Transient Data

The rapid development of automated controls, telecommunications and fire/security systems has made it imperative to have properly coordinated low-voltage protection. Modern networked industrial facilities require error free transmission of information for maximum productivity and integrity of data.

The SolaHD STC series protects all susceptible low-voltage cable routes entering a facility and at key points within the building. These devices can be used as part of a multi-stage protection strategy which involves clamping the initial highenergy impulse, filtering any remaining noise or transients to the PLC or sensitive equipment and finally, protecting the Data/Signal lines entering and leaving the control panel. Modern, networked industrial facilities require error free transmission of information for maximum productivity and data integrity.

The hybrid design of these Data/Signal Line surge suppressors allows them to respond quickly with high energy absorption. These units are available in a variety of application specific voltage levels and packaging configurations. The STC series is used to protect network signal lines entering or leaving control panels including PLCs, universal remote I/O, DeviceNet ${ }^{\text {TM }}$ and Data Highway Plus.

Low Voltage - Data/Signal, STC Series

| Series | Application |
| :--- | :--- |
| STC-POE | Power-over-Ethernet, Category 5 and Category 6 |
| STC-DRS | DIN Rail mountable, single pair surge protection |
| STC-642 | Two-Pair Data/Signal Protection |
| STC-CCTV | High-Frequency Coaxial protection for head and camera ends |

## STC-PoE Series, Category 5 and 6 Power-over-Ethernet Applications

The SolaHD STC Power-over-Ethernet (PoE) series is designed to work on Category 5 PoE transmission lines as well as Category 6 applications. They feature both female to female and male to female RJ-45 connection options for ease of installation.

Power-over-Ethernet is a technology for wired Ethernet LANs (Local Area Networks) that allows the electrical current to be carried by the data cables rather than power cords. This minimizes the number of wires that must be strung in order to install the network. The result is lower cost, less downtime, easier maintenance and greater installation flexibility than with traditional wiring.

PoE allows users to power devices over Ethernet cabling. Power and networking is provided over a single cable. PoE has tremendous advantages in industrial applications. The ease of combining signal and power in a single Ethernet cable connection is contributing to the already rapid evolution of Ethernet-based industrial control systems. Category $5 e$ and Category 6 commonly known as Cat5e and Cat6 are the most widely used Ethernet connectivity methods on the market today. Cat5e and Cat6 are defined in ANSI/TIA/EIA 568-B standard for Unshielded Twisted Pair Cabling.

## Selection Table

| Catalog Number | Description |
| :---: | :--- |
| STC-P0E-65FF | Female to Female Connector |
| STC-CAT6-P0E-I | Female to Female Connector with iso- <br> lated ground |
| STC-C6-MP4 | CAT 6 PoE Mounting Plate |

The STC PoE series is ideally suited to protect expensive equipment and critical communication/data transfer from internally generated transients and noise.

## Features

- Exceeds CAT 5 PoE \& 6 transmission values
- Applications up to 60 Vdc @ 300 mA
- Three year limited warranty

## STC-PoE-65FF

Features

- Single use design
- 60 Vdc @ 300 mA continuous
- Cost effective protection

## STC-CAT6-PoE-I

## Features

- Hybrid PTC (positive temperature coefficient) resettable fuse - up to 5,000 times
- 60 Vdc @ 750 mA continuous
- Isolated ground available
- 10kA peak surge current
- Premium protection

## Specifications

## STC-DRS Series, DIN Rail Protection

Using three-stage hybrid technology, this DIN Rail mountable, single pair, surge protection device attenuates over-voltage transients with gas tubes and silicon avalanche components while resetable fuses (PTCs) mitigate sneak currents. The PTC increases resistance by several orders of magnitude when over-currents exceed safe levels. A normal state resumes when over-currents are removed. The ability to self-restore in this manner significantly increases performance and survivability.

The STC-DRS Series mounts onto a standard 35 mm industrial DIN rail. There are three Field Side and three Electronics Side screw terminals. One is reserved for a shield. Three electrically tied ground terminals are provided for grounding the unit to building-approved ground. The shield is isolated from ground.

## Features

- Low-Voltage data surge protection
- Three-Stage hybrid technology
- Sneak/Fault current protection with resetable fuses (PTCs)
- Low profile packaging
- Easy installation
- Fits standard 35 mm DIN Rail
- Fast response time <1 nanosecond
- Five year limited warranty

## Certifications and Compliances

-( (1) Listed

- UL 497B
- RoHS Compliant

Dimensional Diagram - in. (mm)

Notes:
These protectors are intended for indoor use on communication loop circuits that have been isolated from the Public Switch Telephone Network.

The communication loop circuits shall not be exposed to accidental contact with the electric light or power conductors. The protectors shall be installed per the applicable requirements of the National Electric Code, ANSI/NFPA 70.

## STC-642 Series, Data/Signal Line Protection

The STC-642 series of surge suppressors are dual pair (four wire) modules using three-stage hybrid technology. This module addresses over voltage transients with gas tubes and silicon avalanche components. In addition, sneak and fault currents are mitigated with resetable fuses (PTCs). The PTCs increase resistance several orders of magnitude when over currents exceed safe levels. A normal state resumes when over currents are removed. The ability to self restore in this manner significantly increases suppressor performance and survivability.

The STC-642 card edge module is gold-plated, double sided and is designed to mate with the STC-642 gold-plated female terminal connector (sold separately). When snapped together, the data circuits pass thru the protector in a serial fashion from the four Field Side terminals to the four Electronics Side terminals. Terminals 1 or 10 of the STC-PCB1B must be attached to building approved ground.

## Application

- Intended for indoor use on communication loop circuits which have been isolated from the Public Switch Telephone Network.
- RS232 applications used with STC642-020 and STC-PCB1B
- 4-20 ma signal applications used with STC642-036 and STC-PCB1B
- For use in service capable of supplying less than 150 milliamperes continuously.

## Features

- Lightning protection for low voltage data
- Signal lines
- Three-stage protection
- Sneak/fault current protection
- Resetable solid-state fuses - PTCs
- Low capacitance option for high speed data
- Plug-in module / Requires PCB1B base
- Hybrid design of includes series resistance
- Fast response time
- Five year limited warranty

## Certifications and Compliances

## STC-CCTV Coax Series

The STC-CCTV Series is tailored specifically to CCTV, data, audio and cable applications. These units are single Coax Surge Protective Devices implementing three-stage hybrid technology. They address overvoltage transients with a primary gas tube, and secondary silicon avalanche components. Over-currents (e.g. sneak and fault currents) are mitigated with solid-state resetable fuses (PTCs). The STC-CCTV units are designed in accordance with NFPA 780 (2004 Edition) requirements, with up to 20kA of surge current capability. The STC-CCTV-75I model has an isolated ground and is recommended for use at the camera end.

## Applications

- CCTV Head End
- CCTV Camera End

## Features

- Hybrid, three-stage technology
- Sneak/fault current protection
- Low insertion loss
- Shielded case
- Five year limited warranty

## Certifications and Compliances

- (UL) Listed
- UL 497B
- RoHS Compliant
- NFPA 780 (2004) Compliant for Communication Protectors

## CVS Hardwired Series - Constant Voltage Transformers

Superior voltage regulation of $\pm 1 \%$ sets the CVS series apart from other power conditioning technologies on the market. Extremely tight regulation is accomplished by SolaHD's ferroresonant transformer technology. The CVS recreates a well regulated sinusoidal waveform that is well isolated from input disturbances including:

- Impulses
- Swells
- Brownouts
- Sags
- Severe waveform distortion

No other power conditioning technology provides as complete a solution against these power quality disturbances. The CVS series is ideal for applications where even a small change in voltage level can lead to unscheduled downtime, misoperation, incorrect data or scrapped production.

## Applications

- Industrial automation and control equipment PLCs
- Analytical laboratory and factory automating equipment
- Photo processing equipment
- Sound/recording systems
- Photographic enlargers
- Broadcast equipment

## Features

- Superior voltage regulation of $\pm 1 \%$
- Surge protection tested to ANSI/IEEE C62.41, Class A \& B waveform
- Harmonic filtering

## Selection Tables: Single Phase

## Notes:

1 - Consult user manual for fuse sizing.
2 - It is recommended that the unit run at a minimum of 40-50\% load. See the Operating Characteristics section for more details.

## Design Styles (CVS and MCR Hardwired)

Style 1

Style 2

Style 3

These styles are single phase only.

## MCR Hardwired Series - Power Line Conditioning with Voltage Regulation

The MCR Hardwired Series provides excellent noise filtering and surge protection to safeguard connected equipment from damage, degradation or misoperation. Combined with the excellent voltage regulation inherent to SolaHD's ferroresonant design, the MCR can increase the actual Mean Time Between Failure (MTBF) of protected equipment. The MCR is a perfect choice where dirty power, caused by impulses, swell, sags, brownouts and waveform distortion can lead to costly downtime because of damaged equipment.

## Applications

- Industrial automation and control equipment PLCs
- Machine tools
- Computer loads and electronic equipment
- Robotics
- Semiconductor fabrication equipment

## Features

- $\pm 3 \%$ output voltage regulation
- Noise attenuation
- 120 dB common mode
- 60 dB transverse mode
- Surge protection tested to ANSI/IEEE C62.41 Class A \& B Waveform:
- <10 V let through typical
- Acts as a step-up or step-down transformer
- Harmonic filtering
- Hardwired
- Galvanic isolation provides exceptional circuit protection
- 25 year typical MTBF
- No maintenance required

## MCR Portable Series - Power Line Conditioning with Voltage Regulation

The MCR provides excellent noise filtering and surge protection to protect connected equipment from damage, degradation or misoperation. Combined with the excellent voltage regulation inherent to SolaHD's ferroresonant design, they can increase the actual Mean Time Between Failure (MTBF) of protected equipment. These units are a perfect choice where dirty power caused by impulses, swell, sags, brownouts and waveform distortion can lead to costly downtime because of damaged equipment.

## Applications

- Computers/ Printers
- Telephone/FAX systems
- POS terminals
- Security systems
- Laboratory equipment
- LAN networks

## Features

- $\pm 3 \%$ output voltage regulation
- Noise attenuation
- 120 dB common mode
- 60 dB transverse mode
- Surge protection tested to ANSI/IEEE C62.41 Class A \& B waveform (<10 V let-through typical)
- Harmonic filtering
- Galvanic isolation provides exceptional circuit protection.
- Point-of-use protection (cord \& plug connected)
- Easy \& Flexible Installation
- 25 year typical MTBF
- No maintenance required

E47379 LR044950

Note: Ratings are for a $40^{\circ} \mathrm{C}$ ambient temperature.

## Regulation

SolaHD's CVS power conditioners will hold output voltages to $\pm 1.0 \%$ or less with input variations as great as $\pm 15 \%$ ( $115 \mathrm{~V} \pm 15 \%$ or $120 \mathrm{~V}+10 \% /-20 \%$ ). Units operated at less than rated load will maintain approximately $\pm 1 \%$ regulation over a wider input line voltage variation. Output meets NEMA voltage specifications even when input voltage drops to $65 \%$ of nominal. The output versus input voltage relationship for a typical CVS is show in Figure A.

Note: MCR line regulations: $\pm 3 \%$ for $60 \mathrm{~Hz} ; \pm 5 \%$ for 50 Hz . The typical performances shown in Figure B indicate that most of the residual changes take place near the lower ( 95 V ) and upper ( 130 V ) ends of the input range. It is possible to improve output regulation if line variations remain within a restricted range near the center of the nameplate range (for example, 100-120 V).

Figure B: Line Regulation
Normally, the output voltage will rise as the load is decreased. Typical percentages for changes in resistive load from full to zero load as shown below.

| CVS Conditioner <br> Rating - VA | Increase in Output Voltage due to <br> Load Removal |
| :---: | :---: |
| 30 | $3 \%$ |
| $60 \& 120$ | $2 \%$ |
| $250 \&$ over | $1 \%$ |

## Input Characteristics

SolaHD power conditioners include a resonant circuit that is energized whether or not it is serving load. The input current at no load or light load may run $50 \%$ or more of the full primary current. As a result, the temperature of the unit may rise to substantially full-load level, even at light or no load. Input power factor will average $90-100 \%$ at full load, but may drop to about $75 \%$ at half load and $25 \%$ at no load. In any case, the current is always leading. The input no load watts are about $12.5 \%$ of the VA rating.

## Frequency

Output voltage varies linearly with a change of frequency of the input voltage. This change is about $1.5 \%$ of the output voltage for each $1 \%$ change in input frequency and in the same direction as the frequency change.

Figure C: Power Factor

## Power Factor

SolaHD power conditioners regulate any power factor load. Output voltage is a function of load current and load power factor (see Figure C). If lower voltage under lagging power factor is objectionable, correction may be made with capacitors at the load. "Median" value of output voltage will vary from the nameplate rating if the load has a power factor other than that for which the transformer was designed. Load regulation will also be relatively greater as the inductive load power factor is decreased (see Figure C). However, the resulting median values of output voltage will be regulated against supply line changes at any reasonable load or load power factor.

## Efficiency

The copper magnet wire and lamination material used in SolaHD ferroresonant products are selected to achieve efficiencies of $90 \%$ or higher. Whether or not an external load is being served, current will be drawn from the line whenever the primary is energized, since the capacitor remains connected in the circuit.

## Overload and Short Circuits

When the load is increased beyond the regulator's rated value, a point is reached where the output voltage suddenly collapses and will not regain its normal value until the load is partially released. Under direct short circuit, the load current is limited to approximately $150-200 \%$ of the rated full load value and the input watts to less than $10 \%$ of normal.

Figure D: Overload Performance

A constant voltage regulator will protect both itself and its load against damage from excessive fault currents. Fusing of load currents may not be necessary. The actual value of short-circuit current varies with the specific design and rating. Units may be operated indefinitely at short-circuit. This characteristic protects the unit itself as well as the load and load circuit being served. Typical overload performance is shown in Figure D.

## Motor Loads

Because of the fast response time of the SolaHD circuit, any current-limiting characteristic must be taken into account for transient overloads such as motor starting and solenoid operation. In general, the SolaHD constant voltage regulator must have a capacity nearly equal to the maximum demand made on it, even for an instant. To determine the power rating of the regulator, peak motor-starting current or solenoid inrush current should be measured or power factor correcting capacitors should be used to reduce the starting VA of the load.

## Response Time

An important advantage of SolaHD's ferroresonant transformer is its fast response time compared with other types of AC regulators. Transient changes in supply voltage are usually corrected within $11 / 2$ cycles or less; the output voltage will not fluctuate more than a few percent, even during this interval.

Operating Characteristics of the CVS \& MCR Series

Except as noted, all characteristics of SolaHD's CVS products also apply to the MCR series.

## Temperature

SolaHD's ferroresonant power conditioners are very stable with respect to temperature. The change in output voltage is only $0.025 \% /{ }^{\circ} \mathrm{C}$. Units are factory adjusted to $+2 \% /-0 \%$ of nominal, with full load and nominal input voltage. This adjustment to the high side of nominal is to compensate for the natural temperature drift of about $1 \%$ that takes place during initial turn-on or warm-up. When the unit warms up to operating temperature, the voltage typically falls about $1 \%$.

At a stable operating temperature, the output voltage will change slightly with varying ambient temperatures. This shift is equal to approximately $1 \%$ for each $40^{\circ} \mathrm{C}$ of temperature change. The normal maximum temperature rise of a SolaHD power conditioner may fall anywhere in the range of $40^{\circ} \mathrm{C}$ to $110^{\circ} \mathrm{C}$ depending on the type and rating. The nominal design ambient range is between $-20^{\circ} \mathrm{C}$ and $+50^{\circ} \mathrm{C}\left(-20^{\circ} \mathrm{C}\right.$ to $+40^{\circ} \mathrm{C}$ for $70-1000 \mathrm{VA}, 60 \mathrm{~Hz}$ portable models).

## External Magnetic Field

In almost all applications, this effect may be disregarded. The exclusive SolaHD "wide outside leg" construction reduces stray magnetic fields to a practical minimum. On critical applications, care should be taken in orientation of the core with respect to critical circuits to minimize the effect of the field.

## Phase Shift

The phase difference which exists between input and output voltages is in the range of 120 degrees to 140 degrees at full load. This phase difference varies with the magnitude and power factor of the load, and to a lesser extent, with changes in line voltage and load power factor.

## Transient Protection

Ferroresonant power conditioners protect input transients (caused by lightning and load switching) from damaging the sensitive electronic load. A typical surge protective device (SPD) tries to 'clamp' a transient by diverting it to ground. A ferroresonant power conditioner "blocks" the transient. This 'blocking' action is achieved by total physical separation from input (primary) to output (secondary). Because of this difference in operation, it is difficult to apply the same specifications to a ferroresonant power conditioner. Some parallels can be made however.

One, is that under load, the let-through voltage of a ferroresonant power conditioner (SPD refers to "clamping voltage") is less than 10 V above the point where the sine wave would normally be at any given time. The ferroresonant power conditioner is an 'active tracking' suppressor with several advantages. The Ferro power conditioner will not shunt the transient to the ground line as SPD devices typically do. Shunting the transient to ground can cause the disturbance to be transmitted to other sensitive loads within a facility. This can pose serious problems with electronic or microprocessor-based equipment, especially if there is poor grounding within a facility. Other advantages provided by ferroresonant power conditioners include noise filtering, filtering of harmonic distortion and protection against voltage fluctuations such as sags or swells. These features are not provided by standard surge protection devices but are often misrepresented or misused by SPD manufacturers trying to market their product as a "Do All" power quality device.

## SOLATRON ${ }^{\text {TM }}$ Plus Series - Three Phase Power Conditioners

## Applications

- Automatic Packaging Machinery
- Large Machine Tool Equipment
- UPS Bypass Circuits
- Retail Store
- Process Equipment

## Features

- Rugged, industrial construction
- High overload capability
- High MTBF - No fans used
- No power factor restriction on loads

- Tight regulation for protection against sag (-25\%) and swell (+10\%) conditions
- No load current interruption for auto-bypass mode
- Status indicating lights
- Shielded, copper wound isolation transformer
- Surge protection to ANSI/IEEE and IEC Standards
- High efficiency (96\%) microprocessor controlled on-load tap changer
- Automatic over and under voltage regulation. Auto restart upon power loss and return
- Two year limited warranty

## Certifications and Compliances

- (UL)us Listed
- UL 1012
- CSA C22.2 No. 125
- FCC Rules: complies with Part 15 Subpart J for a Class A computing device

## Selecting a UPS

The SolaHD UPS product line consists of four topologies and classes of power protection:

DC topology provides cost effective, efficient back-up power for 24 Vdc applications. The SolaHD DC UPS will support the load during AC power loss or power supply failure.

Off-Line topology (also called stand-by) is a cost-effective UPS choice for small, less critical, stand-alone applications such as isolated PLC, PCs and peripherals. Network communications are a useful option.

Line-Interactive topology provides highly effective power conditioning plus battery back-up. This is particularly applicable in areas where power outages are rare, but where there are frequent power fluctuations. Network communications are available and sometime necessary.

The $\mathbf{O} \mathbf{n}$-Line alternative provides the highest levels of power protection, conditioning and power availability. True on-line topology is accomplished with double conversion technology. Network communications are often necessary to protect mission-critical applications.

How to choose the appropriate UPS for your application:

1. Add up the maximum electrical power requirements for all equipment to be protected. To obtain the power rating, multiply: Volts $\times$ Amps $=$ VA. Volt and Amp ratings can be found on the nameplate of your equipment.

Equipment to be Protected Volts Amperes $\begin{gathered}\text { VA } \\ \text { (volts } \times \text { Amperes) }\end{gathered}$

| $\square$ | $\sim$ | $\square$ | $\square$ |
| ---: | :---: | :---: | :---: |

2. Choose the level of protection appropriate to your application from Table 1.
3. Turn to the series indicated at the top of the matrix for sizes, specifications and other ordering information.

* When sizing the UPS, allow for future expansion. If not available, it is recommended to allow for at least $25 \%$ growth.
** Total Watt $=$ Total VA $\times$ Power Factor (P.F.) for AC Power only. If power factor is not available, simply multiply VA by 0.65 .

## Selection Table

| Feature | Benefits | DC | Off-Line |  | Line-Interactive S3K | On-Line |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## SDU Series, Direct Current Uninterruptible Power Supply (DC UPS) System

The SDU DIN Rail DC UPS is an advanced 24 Vdc uninterruptible power system that combines an industry leading design with a wide operational temperature range and unique installation options. The SDU DC UPS is a powerful, microprocessor controlled UPS that provides protection from power interruptions. With an input voltage range of 22.5 to 30.0 Vdc , the DC UPS is the ideal power back-up solution for your critical connected loads.

These units were designed specifically for use with SolaHD's popular SDN Series of power supplies. SolaHD's external battery module is the only one on the market that allows you to seal the electronics in the panel and maintain safety by placing the battery outside of a non-ventilated enclosure.

These units include easy to wire screw terminations for critical devices needing battery back-up. The SDU DC UPS includes an automatic self-test feature that checks the UPS and battery functions. Battery charging occurs automatically when input DC power is applied. When power fails, the DC UPS will switch to battery back-up. If the battery is no longer useful, the UPS will sound an alarm and an LED indicator will illuminate.

Back-up power protection in modern industrial applications depends mainly on AC UPS. AC is converted to DC, and converted back to AC in the AC UPS, then converted back to $D C$ in the protected equipment power supply. By applying the SolaHD SDU DIN Rail DC UPS, you avoid the inefficiencies of all these conversions. This design maximizes system up-time flexibility, and optimizes reliability assurance.

## Applications

- Industria//Machine Control
- Automation Process Control
- Computer-based Control Systems
- Conveying Equipment
- Material Handling
- Packaging Machines
- Semiconductor fabrication equipment
- DeviceNet ${ }^{\text {TM }}$
- Amusement Park Equipment
- Pharmaceutical Applications
- Control Rooms

## Features

- Modular, rugged industrial grade design
- Microprocessor based controls
- Automatic self-test feature for UPS function and battery management check

- Power module wide operation temperature range ( -20 to $+50^{\circ} \mathrm{C}$ )
- Flexible batteries back-up expansion capabilities
- Overload protection in normal and battery modes
- User replaceable batteries
- IP-20 rated input and output screw terminals
- No internal fan, no extra cooling required
- Sturdy, reliable all metal DIN Rail mounting connector
- LED status indicators
- Universal dry contact relay terminals provide remote signaling
- Monitoring, diagnostics, and remote turn-on and shut-off capabilities
- Two year limited warranty

## Selection Table

| Catalog Number | Description | Approx. Ship Weight lbs (kg) |
| :---: | :---: | :---: |
| UPS |  |  |
| SDU 10-24 | 240 VA, $24 \mathrm{~V} / 10 \mathrm{~A}$ DIN Rail DC UPS power module, battery module is required | 1.7 (0.77) |
| SDU 20-24 | 480 VA, $24 \mathrm{~V} / 20 \mathrm{~A}$ DIN Rail DC UPS power module, battery module is required | 1.7 (0.77) |
| Battery |  |  |
| SDU 24-BAT | 24V DIN Rail/Panel Mount Battery Module (cable included) | 12.0 (5.33) |
| SDU 24-BATEM | 24V External Mount Battery Module (cable included) | 16.0 (7.11) |
| Accessories |  |  |
| SDU 24EXTBC6 | Optional 6 ft. Battery Module cable to 24V DC UPS | 0.5 (0.22) |
| SDU 24-DB9 | Optional interface kit to convert relay contacts signals to DB9 signals | 1.0 (0.45) |
| SDU-PMBRK | Optional chassis mount brackets to secure UPS to wall, panel, or enclosure | 0.5 (0.22) |

There are three individual hardware products when putting an SDU DC UPS system into operation:

1. 24 Vdc Power Supply (Recommended SolaHD SDN Series)
2. 24 Vdc SDU DC UPS Power Module
3. 24 Vdc SDU DC UPS Battery Module; or 24 Vdc SDU DC UPS External Battery Module

There are two models of the SDU DC UPS Power Module:

1. SDU 10-24, $24 \mathrm{Vdc} / 10 \mathrm{amp}$ (battery modules are required)
2. SDU 20-24, $24 \mathrm{Vdc} / 20 a m p$ (battery modules are required)

## DIN Rail Mounted Battery Option

1) AC/DC Power Supply
2) Power Module: SDU 10-24 or SDU 20-24
3) Battery Module: SDU 24-BAT
4) Optional battery module for extended Back-up.

There are two models * of the SDU DC UPS Battery Modules:

1. SDU 24-BAT, DIN Rail/Panel mount for installation in ventilated enclosure, up to 4 battery modules can be connected to the SDU DC UPS.
2. SDU 24-BATEM, Panel mount, alternate battery module for external installation of non-ventilated enclosures, only 1 battery module can be connected to the SDU DC UPS.

* Can not use a combination of both models of the battery modules, only one model of the battery module can be connected to the SDU DC UPS.

## External Battery Option

1) $A C / D C$ Power Supply
2) Power Module: SDU 10-24 or SDU 20-24
3) Battery Module: SDU 24-BATEM

SDU DC UPS Power Modules Specifications

Notes:

1. See Battery Back-up Times on next page.
2. DC UPS System includes one power module (SDU 10-24 or SDU 20-24) and one or more battery modules (SDU 24-BAT or SDU 24BATEM)

Uninterruptible Power Supplies

## SDU DC UPS Battery Module Specifications

| Parameter | SDU 24-BAT | SDU 24-BATEM |
| :---: | :---: | :---: |
| Nominal Voltage | 24 Vdc |  |
| Protection | Fuse: 30A | Circuit Breaker: 24V, 25A |
| Charging Current | 0.5A | 0.8A |
| Enclosure <br> Dimension in. (mm) | $\begin{gathered} 4.88 \times 8.27 \times 4.55 \\ (124.0 \times 210.0 \times 116.0) \end{gathered}$ | $\begin{gathered} 11.5 \times 5.57 \times 4.57 \\ (292.0 \times 142.0 \times 116.0) \end{gathered}$ |
| Enclosure Type | IP20 | NEMA 1 |
| Terminal Connector Type | Polarized Powerpole Connectors |  |
| Batteries | Replaceable Batteries |  |
| Accessories | 1 ft . polarized battery cable | 6 ft . polarized battery cable |
| Operating Temperature | $-20^{\circ}$ to $+50^{\circ} \mathrm{C}$ |  |
| Storage Temperature | $-20^{\circ}$ to $+40^{\circ} \mathrm{C}$ |  |
| Humidity | 95\% no condensation |  |
| Weight - lbs (kg) | 12.0 (5.33) | 16.0 (7.11) |
| Mounting | Simple snap-on system for DIN Rail TS35/7.5 or TS35/15 or chassis-mounted, optional screw mounting set SDU-PMBRK. | Wall/Chassis Mounting |

## S1K Mini-Tower Off-line UPS

The S1K series provides economical protection from damaging impulses and power interruptions. These units include two types of outlets; three for critical devices needing battery back-up and surge protection such as the CPU and one surge protected only outlet for non-critical devices like printers and fax machines. The S1K is ideal for point of sale and office applications.

## Applications

- PCs
- Workstations
- Computer Terminals

## Features

- Lightweight, compact design
- 4 NEMA 5-15R outlets, (3 Battery, 1 Surge)
- Data-line surge protection for phone or network included on every unit.
- DB9 communications Interface
- Software and cable included
- Step sinewave output
- Two year limited warranty

Certifications and Compliances

- ${ }^{(U L) u s}$ Listed, UPS Equipment
- UL 1778, CSA C22.2 No. 107.3
- RoHS Compliant

## Related Products

## S3K Mini-Tower Line-Interactive UPS

The S3K is an economical choice for those applications requiring the performance of a sinewave output, line interactive UPS with the mini-tower shape for cabinet installations. The S3K Series protects against most severe power disturbances through state-of-the-art, line-interactive technology. Most power disturbance corrections are accomplished without transferring to the internal battery. Utility power is continually protected by the S3K Series UPS and internal battery life is optimized.

The UPS has built in protection for under and over voltage conditions including low-energy lightning surges introduced on the input power source. All S3K Series UPS are provided with an input circuit protector and surge protected data line connectors. The S3K Series UPS is provided with a battery test function. Should the battery fail this test, the UPS will display a warning to indicate that the battery needs to be replaced.

## Applications

- Workstations
- PLCs
- Robotics and Process Control
- Industrial Automation Systems
- Automatic Service \& Dispensing Equipment

## Features

- Mini-Tower design for control cabinet installation.
- Automatic voltage regulation (AVR) topology saves battery power for deep voltage sag situations.
- Sine wave output
- User replaceable, "hot swappable" batteries (Downtime for battery replacement not required).
- RS-232 communications port
- Built-in surge protection
- Cold start capability (DC power on)
- Telephone/modem spike protection
- Power management software is included (UPSMON).
- $50 / 60 \mathrm{~Hz}$ auto sensing
- Fully digitized, microprocessor controlled
- Protects against most adverse power conditions including:
- Frequency variations
- Surge
- Sags
- Spike
- Blackouts
- Over and under voltages

## Certifications and Compliances

- (ULU) us Listed, UPS Equipment - UL 1778, CSA C22.2 No. 107.3
- IEC 60801-2, Level 4 / IEC 60801-4, Level 4 / ANSI C62.41 Category A \& B
- RoHS Compliant

## Related Products

- Portable MCR Power Conditioners
- Surge Protective Devices
- Active Tracking ${ }^{\circledR}$ Filters

## S4K2U-C and S4K2U-5C Industrial On-Line UPS

The new SolaHD S4KC is a single-phase, on-line (doubleconversion) UPS system available in 700-3000VA, 120 V and 230 V . On-Line design means zero transfer time from external to internal power. When utility power fails, your critical load remains supported by a seamless flow of power. Rack or tower configurable, the SolaHD S4KC UPS offers customers a higher power factor, longer battery life, higher reliability and reduced cost of ownership. Housed in a slim 2U package, the SolaHD S4KC protects equipment from virtually all power disturbances due to blackouts, brownouts, sags, surges or noise interference. The UPS includes internal batteries. Optional, matching external battery cabinets, also in a slim $2 \mathrm{U}(3.5$ ") size, offer extended battery runtime.

The LED display indicates battery capacity, percentage of UPS load, battery operation, bypass operation and UPS fault condition.

The rack-tower models are also supplied with securing flanges and rack slide mounting hardware is available separately, if required. Units can be easily hardwired by removing the attached line cord and receptacle plate. All units include a conduit knockout cover in the box.

## Applications

- Industrial Automation Systems
- Critical Microprocessors and PC Based Systems
- Robotics and Process Control
- Programmable Logic Controllers (PLC)
- Mission Critical and High Speed Networks
- Enterprise Telecommunication Systems
- Pharmaceutical and Medical Diagnosis Equipment
- Printing and Publishing Machinery

## Features

- Hardwire capability for permanent installation
- Small 2U height maximizes available space
- Input and output noise suppression
- Higher output power factor of 0.90
- PWM (pulse-width modulation) inverter reduces output voltage distortion
- Add on batteries for extended back-ups
- Integral sealed non-spillable batteries
- Hot swappable user replaceable battery
- Automatic restart

- Automatic and manual battery test
- Rack-mount or stand-alone tower mounting
- Units are field configurable with a PC as a frequency converter (bypass will be disabled)
- Select S4KC models use an average of $35 \%$ less energy than their standard counterparts
- Select S4KC models provide continuous uptime for the connected equipment, with capacity and battery back-up delivered in cabinets that use 2 U of rack space
- Integral dynamic bypass reduces shutdowns
- Compatible with most standby generators
- Two year limited warranty

## Certifications and Compliances

## All Models

- ABS Type Approved
- RoHS Compliant
- ISTA Procedure 1A

## S4K2U-C, S4K2U3000-5C:

- (ULU)us Listed, UPS Equipment
- UL 1778
- CSA C22.2 No. 107.3

## S4K2U-C:

- ENERGY STAR certified:
- 700, 1000, 1500, 2000, 3000 VA 120 V input

## S4K2U-5C:

- ( $\boldsymbol{\epsilon}$ : EC/EN/AS 62040-1-1:2008
- EAC: TR CU 004/2011 - Technical Regulation of Custom Union "On the safety of low-voltage equipment"

Note: The securing flanges do not support the weight of the UPS. Rack slides or shelves are required (sold separately).
EAC applies only to certain CE models.

|  | 100\% | 201 | 126 | 128 |

Note: S4K2U-5C models are not available in 700VA or 1500VA.
Run times in this table are approximate. They are based upon new, fully charged standard battery modules at a temperature of $25^{\circ} \mathrm{C}\left(77^{\circ} \mathrm{F}\right)$ with $100 \%$ resistive UPS loading. Run times listed above can vary by $+/-5 \%$ due to manufacturing variances of the individual batteries

## S4K4U-C 6 kVA and S4K6U-C 10 kVA Industrial On-Line UPS

The new SolaHD S4K4U6000C and the S4K6U10KC Industrial UPS Series are the first true On-Line industrial UPS that provide higher output power factor, higher efficiency, flexible output voltage, an integrated maintenance bypass switch and internal batteries all in slim 4U (7.0") and 6U (10.5") enclosures respectively.

The S4K4UC and S4K6UC features true On-Line (double conversion) topology providing the ultimate in protection against a wide range of potential power problems. The S4K4UC design of two 3 kVA , 120 V inverters allow flexible output voltage to meet mixed load voltage requirements. The UPS automatically configures the output voltage to match the input configuration without requiring tap selections. Self diagnostics simplify maintenance and troubleshooting. The standard maintenance bypass switch provides an additional level of protection.

The S4K4UC and S4K6UC also feature a wide input voltage window to support the critical load without having to transfer to the battery. This extends system availability when back-up is truly needed.

## Applications

- Industrial Computers
- Robotics and Process Controls
- Industrial Automation Systems
- Network Servers
- Enterprise Telecommunication Systems
- Printing and Publishing Machinery
- Pharmaceutical and Medical Diagnosis Equipment
- Industrial and Commercial Machinery
- Micro-processor Controlled Equipment
- Mission Critical Devices

## Features

- True double conversion topology
- Higher power factor of $0.80(6 \mathrm{kVA})$ and 0.90 (10kVA)
- Both models offer 208/120V or 240/120V
- Configurable as a tower or rack mounting
- Highest density, 6 kVA in only 4 U and 10 kVA in only 6U of rack space
- Easily installed in 18 " to 32 " deep rack using rack mount kit \# SRS1832
- User replaceable, hot-swappable internal battery module
- Extended battery cabinets
- Includes both automatic and manual maintenance bypass switch

- Automatic frequency detection (60 or 50 Hz )
- Power factor correction
- Self-diagnostics simplify maintenance and troubleshooting
- Remote emergency Power Off (REPO)
- Intellislot ${ }^{\text {TM }}$ USB and terminal block communication ports
- Compatible with most standby generators
- Uses an average of $35 \%$ less energy than their standard counterparts
- Provides continuous uptime for the connected equipment, with capacity and battery back-up delivered in cabinets that use 4 U to 6 U of rack space
- Two year limited warranty

## Certifications and Compliances

- (ULU) Us Listed, UPS Equipment
- UL 1778
- CSA C22.2 No. 107.3
- IEEE/ANSI C62.41 Category A \& B
- ISTA Procedure 1A
- ABS Type Approved
- RoHS Compliant
- energy\%AS

ENERGY STAR ${ }^{\circledR}$ certified

## Related Products

- Portable MCR Power Conditioners
- Surge Protective Devices
- Active Tracking ${ }^{\circledR}$ Filters

|  | 80\% | 46 | 49 |
|  | 90\% | 41 | 44 |
|  | 100\% | 36 | 40 |

The factory default is programmed for internal batteries only. Table 8 shows the estimated battery back-up times at different loads. The user may specify the number of external battery cabinets attached to the UPS.

Note: Run times in this table are approximate. They are based upon new, fully charged standard battery modules at a temperature of $25^{\circ} \mathrm{C}\left(77^{\circ} \mathrm{F}\right)$ with $100 \%$ resistive UPS loading. Run times listed above can vary by $+/-5 \%$ due to manufacturing variances of the individual batteries

Table 8: Battery Back-up Times continued

| Number of Batteries/Cabinets | Load \% of Capacity | Model Rating |  |
| :---: | :---: | :---: | :---: |
|  |  | 6000 VA | 10000 VA |

## S4K5U-5C 6 kVA International On-Line UPS

The new SolaHD S4K5U6K5C Industrial On-Line UPS Series is designed for international usage and provides flexible output voltage, an integrated maintenance bypass switch and internal batteries all in a slim 5 U (8.7") enclosure. The S4K5U-5C features true On-Line (double conversion) topology providing the ultimate in protection against a wide range of potential power problems. Flexible output voltages (220/230/240 Volt) are available through the configuration program to allow for international use. One of the three L-N output voltages is selected to match the local voltage. Self diagnostics simplify maintenance and troubleshooting, and the UPS can be serviced by the customer. The standard maintenance bypass switch provides an additional level of protection.

The S4K5U-5C also features a wide input voltage window to support the critical load without having to transfer to the battery. This extends system availability when back-up is truly needed.

## Applications

- Industrial Computers
- Robotics and Process Controls
- Industrial Automation Systems
- Network Servers
- Enterprise Telecommunication Systems
- Printing and Publishing Machinery
- Industrial and Commercial Machinery
- Pharmaceutical and Medical Diagnosis Equipment

## Features

- True double conversion topology
- Higher power factor of 0.80
- Flexible L-N output voltage (220/230/240V)
- Configurable as a tower or rack mount model
- High density, 6 kVA in only 5 U of rack space
- Easily installed in 18 " to 32 " deep rack using rack mount kit \# SRS1832
- User replaceable, hot-swappable internal battery module
- Matching 3U extended battery cabinets
- Includes both automatic and manual maintenance bypass switch
- Automatic frequency detection of either 60 or 50 Hz
- Power factor correction
- Self-diagnostics simplify maintenance and troubleshooting

- Remote Emergency Power Off (REPO)
- IntellislotTM, USB, and terminal block communication ports
- Compatible with most standby generators
- Two year limited warranty

## Certifications and Compliances

- C $\epsilon$
- IEC62040-1
- EAC: TR CU 004/2011 - Technical Regulation of Custom Union "On the safety of low-voltage equipment"
- ISTA Procedure 1A
- ABS Type Approved

## Related Products

- Portable MCR Power Conditioners
- Surge Protective Devices
- Active Tracking ${ }^{\circledR}$ Filters

|  | 60\% | 105 |
|  | 70\% | 98 |
|  | 80\% | 90 |
|  | 90\% | 77 |
|  | 100\% | 70 |

The factory default is programmed for internal batteries only. Table 15 shows the estimated battery back-up times at different loads. The user may specify the number of external battery cabinets attached to the UPS.

Note: Run times in this table are approximate. They are based upon new, fully charged standard battery modules at a temperature of $25^{\circ} \mathrm{C}\left(77^{\circ} \mathrm{F}\right)$ with $100 \%$ resistive UPS loading. Run times listed above can vary by $+/-5 \%$ due to manufacturing variances of the individual batteries.

## S5KC Modular Series On-Line Uninterruptible Power Systems (UPS)

The S5KC Modular UPS is scalable from 5 to 20 kVA , offering many flexible options by adding a few standard modules. Designed to be fully configured, tested and shipped in the configuration you need, the S5KC Modular UPS also has the ability to be easily upgraded in the field to either higher VA ratings (up to 20 kVA maximum), longer back-ups time or to add $\mathrm{N}+\mathrm{x}$ parallel redundancy. Configurations can be cost-effectively upgraded keeping your S5KC Modular UPS current without a large reinvestment in a new system.

The optional $\mathrm{N}+\mathrm{x}$ redundancy provides a fault-tolerant group of power modules and controls. The modular design is easy to upgrade so the UPS can grow with the needs of the system that is being protected.

Each of the modular components, including 5 kVA power modules, LCD display, battery modules and system control modules, can be hot-swapped making it easy to increase power, extend your back-up time or add redundancy while still providing power protection to the load.

This fault-tolerant system uses intelligent power and battery modules which take themselves off-line if there is a problem without interrupting power to the load. Self-diagnostic capabilities simplify maintenance and troubleshooting. Each unit incorporates an internal automatic bypass.

## Applications

With multiple standard options in a smaller footprint, providing more flexibility for capacity and communication both pre- and post-installation, the S5KC delivers the power protection needs in applications such as

- Oil and Gas (Pure OEMs)
- Pharmaceutical
- Automotive
- Food \& Beverage

## Features

- Module level redundancy provides multiple layers of protection to ensure your machine has the power it needs to run safely with no single point of failure, critical loads continue to run on conditioned battery power even if a system component malfunctions.
- An industry leading 0.9 power factor keeps machines performing flawlessly when running on battery power.
- Superior overload capabilities deliver conditioned power during temporary power anomalies without unnecessarily transferring to and from bypass power.

- Independently controlled maintenance bypass is designed to provide maximum system availability to critical equipment by allowing transfer of connected equipment to an alternate power path. The UPS can then be turned Off and removed from service with no interruption of power to connected equipment.
- True on-line double conversion with a large input voltage range (low line transfer down to 110 Vac ) isolates sensitive equipment from power fluctuations while minimizing transfers to increase battery life.
- ENERGY STAR® qualified UPS models - UPS products meeting the EPA's requirements use an average of $35 \%$ less energy than their standard counterparts.
- To enhance the availability and trouble-free operation, every pre-configured S5KC UPS arrives standard with one IS-UNITY-DP communications card installed. Enabling you to take advantage of the remote monitoring and diagnostic service available with your system during your initial standard warranty period.
- Start-up services available, contact your local SolaHD sales representative for details.

## Certifications and Compliances

## All Models

- Energy Star models: S5KC-A, S5KC-B, S5KC-C (except 5 kVA), S5KC-D (except 5 kVA), S5KC-E, S5KC-F:
- (ULU) Listed, UPS Equipment
- UL 1778, Fourth Edition
- CSA C22.2 No. 107.3
- ABS Type Approved
- RoHS Compliant

## Series S5KCA, S5KCB,S5KCC,S5KCD

- C ( (Low Voltage and EMC Directive)
- EN62040-1, EN62040-2
- EAC: TR CU 004/2011 - Technical Regulation of Custom Union "On the safety of low-voltage equipment"

## Chassis Selection

The S5KC Modular UPS system has multiple chassis available to build on:

Select the proper chassis based on your applications current and future need for expansion. Also consider if redundancy will be required for your application then consider your application power and location wiring needs. To help with selecting the appropriate chassis series, we have provided a useful selection flow chart to guide you to an appropriate chassis series for your needs.

Steps to Selection

1. Determine the maximum kVA you will need for future expansion.
2. Determine the kVA and run time value for your immediate need.
3. Using the flow chart to the right, determine the voltage, phase configuration and chassis requirements.
4. Determine if you need redundancy. If the exact run time is critical and you are not sure which unit is appropriate, please contact our technical support team to aid in selection.
5. Select the unit that meets both your immediate requirements, and is expandable to your future needs. Each chassis will have a "Maximum Upgrade" capacity. The Maximum Upgrade is the highest kVA expansion that particular configuration is capable of without removing any of the battery modules from the original configuration.
6. External Battery Cabinets (EBC). Depending on extended run-times desired or your location's spacing requirements, you may be able to add an optional EBC to extend your run-time.
7. Optional External Maintenance Bypass (EMB) or other available accessories. Review your application's current and future needs and consider all functional options including filters and spare modules if desired.

| S5KC-E | 10 Bay | 5-15 kVA, 2PH, Xfmr-free, 200/100-240/120 VAC input/output |
| S5KC-F | 16 Bay | 5-20 kVA, 2PH, Xfmr-free, 200/100-240/120 VAC input/output |

## S5KC Operating Modes

The S5KC UPS is a true online double-conversion system, having the following operating modes:

- Normal Mode
- Back-up Mode
- Auto Restart Mode
- Bypass Mode

## Normal Mode

The power module rectifiers derive power from a utility AC source and supply regulated DC power to the inverter. The module's inverter regenerates precise AC power to supply the connected equipment. The battery charger is in the power module and maintains a float-charge on the batteries of the UPS; additionally, the optional charger module (S5KCCHRGRMOD) can also charge the batteries to maintain a quicker recharge time for long back-up time applications.

## Back-up Mode

When AC utility fails, the connected equipment is supplied power by the inverter, which obtains energy from the battery modules. The output power will not be interrupted during the failure or restoration of the AC utility/mains source.

## Auto Restart Mode

After a power outage and complete battery discharge, and once AC utility is restored, the UPS will automatically restart and resume supplying power to connected equipment. This feature is enabled at the factory, but can be disabled by the user. The user can also program two auto restart delay settings
from the LCD:

- Battery capacity level (\%)
- Countdown timer

## Bypass Mode

The bypass provides an alternate path for power to the connected equipment and operates in the following manner:

- Automatic: In the event of an internal fault or should the inverter overload capacity be exceeded, the UPS performs an automatic transfer of the connected equipment from the inverter to the bypass source.
- Manual: Should the UPS need to be taken out of service for limited maintenance or repair, manual activation of the bypass will cause an immediate transfer of the equipment from the inverter to the bypass source.

S5KC-C \& S5KC-D Frames:
Xfmr-Based

S5KC-E \& S5KC-F Frames:
Xfmr-Free

Table 18: Part Number Configuration
The S5KC modular is available in many combinations. Use the part number template below to identify the description of any given part number.

| Series Designation | Frame Configuration Type | System kVA / kW | Number of Charger Modules | System Type | Battery Type and Number Strings |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | A = 10 Bay, Xfmr Free, 1PH, cULus Listed, GS/ CE/C-tick Marked | 05A $=5 \mathrm{kVA} / 4.5 \mathrm{~kW}$ | $\mathrm{N}=$ No charger module | $N=$ Non-redundant | $\mathrm{NN}=$ None (allows for empty replacement frames to be shipped) |
|  | B = 16 Bay, Xfmr Free, 1PH, cULus Listed, GS/ CE/C-tick Marked | 10A = $10 \mathrm{kVA} / 9 \mathrm{~kW}$ | $\mathrm{A}=1$ charger module | $R=$ Redundant Power and Controls | C1 $=1$ String, CSB UPS 12460 F2 FR |
|  | C = 12 Bay Xfmr <br> Based, 1PH, cULus <br> Listed, GS/CE/C-tick <br> Marked | $\begin{aligned} & 15 \mathrm{~A}=15 \mathrm{kVA} / 13.5 \\ & \mathrm{~kW} \end{aligned}$ |  | $\mathrm{F}=$ Redundant Power, Controls, and Battery | C2 $=2$ Strings, CSB UPS 12460 F2 FR |
|  | D = 16 Bay Xfmr Based, 1PH, cULus Listed, GS/CE/C-tick Marked | $20 \mathrm{~A}=20 \mathrm{kVA} / 18 \mathrm{~kW}$ |  |  | C3 $=3$ Strings, CSB UPS 12460 F2 FR |
|  | E = 10 Bay, Xfmr Free, 2PH, cULus Listed |  |  |  | C4 $=4$ Strings, CSB UPS 12460 F2 FR |
|  | F = 16 Bay Xfmr Free, 2PH, cULus Listed |  |  |  | C5 $=5$ Strings, CSB UPS 12460 F2 FR |
|  |  |  |  |  | C6 = 6 Strings, CSB UPS 12460 F2 FR |
|  |  |  |  |  | C7 = 7 Strings, CSB UPS 12460 F2 FR |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |

Example: 10 Bay, 1PH, 10 kVA/9 kW, No Charger Module, Non-Redundant, 2 strings, 208V, 60 Hz, L-L-G, No Distribution Slots, Standard Product

| S5K | A | 10 A | A | N | C2 |
| :---: | :---: | :---: | :---: | :---: | :---: |

## Configuration Notes:

1. Every pre-configured S5KC UPS arrives standard with one IS-UNITY-DP communications card installed. This allows you to take advantage of the monitoring included with your system during your initial standard warranty period. Start-up services available, contact your local SolaHD sales representative for details.
2. "Maximum Upgrade" capacity considerations. The Maximum Upgrade is the highest kVA expansion each configuration will provide without removing any of the battery modules from the original configuration. Please consider your future expansion and redundancy needs.

| Output Voltage/ Frequency/Wiring | Distribution Slot 1 | Distribution Slot 2 | Product Type |
| :---: | :---: | :---: | :---: |

Configuration Notes:

1. Voltage Options: Additional Output Voltage Configurations are available. Refer to Table 16 and 18, part number configuration template table. Example: D $=240 \mathrm{~V}, 60 \mathrm{~Hz}, \mathrm{~L}-\mathrm{L}-\mathrm{G} ;$ S 5 KC 05 ANN 1 DNNC is a 240 V configuration.
2. Every pre-configured S5KC UPS arrives standard with one IS-UNITY-DP communications card installed. This allows you to take advantage of the monitoring included with your system during your initial standard warranty period. Start-up services available, contact your local SolaHD sales representative for details.
3. Available Expansion Bays (Total/Power) equals the TOTAL available expansion bays still available and POWER is the number of bays that can be used for remaining POWER modules up to the maximum allowed for that configuration. For example: S5KA05ANNC1CNNC, has 7 total, 2 power so you can add either 6 battery modules, 1 charging module or 6 battery modules and 2 power modules.
4. Do you require an EBC or MBC? Please refer to configuration table 20 and 21 to build an appropriate part.
(1) Configurations with run-times in excess of 5 minutes are available, contact Technical Services.

Table 20: External Battery Cabinet (EBC) Part Number Configuration

The S5KC Modular UPS includes internal batteries. Optional, matching external battery cabinets, offer extended battery runtime. Use the part number template below to identify the description of any given part number.

## Specifications

| Mechanical |  |
| :---: | :---: |
| Conducted and Radiated EMC Levels | IEC/EN/AS 62040-2 - Class A, FCC Part 15 (Class A) |

## Table 21: Maintenance Bypass Options

The S5KC Modular Series Maintenance Bypass provides maximum system availability to business critical equipment by allowing transfer of connected equipment to an alternate power path allowing full isolation of the UPS for maintenance. The UPS can then be turned Off and removed from service with no interruption of power to connected equipment.

## S5KCCHRGRMOD, Charger Module

In AC mains mode, the charger module charges the system battery modules or external battery cabinet. Each charger module is rated to deliver 10A charging current. The charger module has an independent control function and maintains real-time communication with the system and the battery modules to ensure stable charging and fault protection.

The charger module may be added or replaced on-line with no interruption or danger to the user, connected battery system or connected equipment.

## S4K4UC AND S4K6UC - Maintenance Bypass Switch

| Catalog Number | Description |  |
| :--- | :---: | :---: |
|  | 1-Year Extended Warranty |  |
| 1EWPS4K06KPAD | 1-year extended warranty for S4K4UC PADs |  |
| 1EWPS4K10KPAD | 1-year extended warranty for S4K6UC PADs |  |
| 3-Year Extended Warranty |  |  |
| 3EWPS4K06KPAD | 3-year extended warranty for S4K4UC PADs |  |
| 3EWPS4K10KPAD | 3-year extended warranty for S4K6UC PADs |  |

## S4KC Industrial - UPS Models

The extended warranty program extends the standard two-year product warranty by the term of the extension purchased, 1-year or 3 years. This results in warranty terms of 3 or 5 years (depending on the extension selected) from the date of purchase. SolaHD will repair or replace the unit at any point during the extension period, subject to the same conditions as the standard warranty. The warranty extension is not transferable.

| Catalog Number | Description |
| :--- | :--- |
|  | 1-Year Extended Warranty |
| 1EWPS4K2U700C | 1-year extended warranty for S4K2U700C |
| 1EWPS4K2U1000C | 1-year extended warranty for S4K2U1000C |
| 1EWPS4K2U1500C | 1-year extended warranty for S4K2U1500C |
| 1EWPS4K2U2000C | 1-year extended warranty for S4K2U2000C |
| 1EWPS4K2U3000C | 1-year extended warranty for S4K2U3000C |
| 1EWPS4K4U6000C | 1-year extended warranty for S4K4U6000C |
| 1EWPS4K6U10KC | 1-year extended warranty for S4K6U10KC |
|  | 3-Year Extended Warranty |
| 3EWPS4K2U700C | 3-year extended warranty for S4K2U700C |
| 3EWPS4K2U1000C | 3-year extended warranty for S4K2U1000C |
| 3EWPS4K2U1500C | 3-year extended warranty for S4K2U1500C |
| 3EWPS4K2U2000C | 3-year extended warranty for S4K2U2000C |
| 3EWPS4K2U3000C | 3-year extended warranty for S4K2U3000C |
| 3EWPS4K4U6000C | 3-year extended warranty for S4K4U6000C |
| 3EWPS4K6U10KC | 3-year extended warranty for S4K6U10KC |

Note: Warranty on S4K4U6000 covers electronics and internal battery.

S4KC Industrial - Battery Cabinets

| Catalog Number | Description |  |
| :--- | :--- | :---: |
|  | 1-Year Extended Warranty |  |
| 1EWPS4K2U48BATC | 1-year extended warranty for S4K2U48BATC |  |
| 1EWPS4K2U96BATC | 1-year extended warranty for S4K2U96BATC |  |
| 1EWPS4K144BATC | 1-year extended warranty for S4K144BATC |  |
| 1EWPS4K288BATC | 1-year extended warranty for S4K288BATC |  |
| 3-Year Extended Warranty |  |  |
| 3EWPS4K2U48BATC | 3-year extended warranty for S4K2U48BATC |  |

| 3EWPS4K144BATC | 3-year extended warranty for S4K144BATC |  |
| 3EWPS4K288BATC | 3-year extended warranty for S4K288BATC |  |

## Field Service Programs for the S4K4UC/6UC Industrial and S5KC Series

These programs are for Domestic coverage (valid only within the continental United States and Canada); additional travel expenses may be billed to customers with site locations more than 150 miles from a major metropolitan area.

## S4K4UC/6UC Industrial Start-Up Programs

Start-Up includes one site trip within the contiguous 48 states by a factory trained technician. Any additional trips by the customer service engineer as a result of the site not being ready for start-up may result in additional costs to the customer. The site trip includes the following services for one UPS module:

- Rack construction, installation or re-configuration with UPS accessories.
- Installation includes mounting and start-up of new UPS and internal batteries (excludes hard-wired applications).
- Services performed by factory trained technician.
- Services performed $24 \times 7$, excluding national holidays within the 48 contiguous states.

## S5KC Modular Start-Up Programs

Start-up services should be ordered as a separate line item at the time of purchase. S5KC Series UPS sold with start-up Services are provided with a 2 year parts and labor warranty. Please refer to the following information for a menu of startup options and please choose the appropriate start-up service required. If start-up is not ordered and performed, please note that this will reduce your warranty period to two years of parts and, 90 days labor.

A separate Preventative Maintenance Only plan is available in addition to the standard Start-Up plan.

## Service Programs - S4K4UC/6UC and S5KC Series

Preferred service level options include 6-hour on-site response, $24 \times 7$ within 150 miles of nearest service centers. $24 \times 7$ emergency service includes parts (including internal batteries), labor, and travel. Also includes one (1) Preventive Maintenance (PM) visit per year, scheduled at the customer's convenience ( $24 \times 7$ ).

Essential service level options include 6-hour on-site response, $24 \times 7$ within 150 miles of nearest service centers. $24 \times 7$ emergency service includes parts (including internal batteries), labor, and travel. Also includes one (1) Preventive Maintenance (PM) visit per year, scheduled by the customer for M-F 8AM-5PM.

Basic service level options include 6-hour on-site response, $24 \times 7$ within 150 miles of nearest service centers. $24 \times 7$ emergency service includes parts (excluding internal batteries), labor, and travel. Preventive Maintenance (PM) not included and is not available if the Basic Service plan is selected.

SolaHD has a broad range of standard power supplies to suit almost any industrial application. Updated approvals and user friendly features make power system design easy. The product line includes one of the broadest ranges of DIN Rail and linear-based power supplies in the marketplace. The DIN Rail products feature full CE compliance (including all the elements of CE design engineers need to worry about: safety/LVD, EMC, and ingress protection). UL 508 approvals eliminate derating in UL 508 listed panel systems. Global inputs are available for installations around the world.

Three phase input options are available on many of the SDN DIN Rail products that convert 380/480 three phase directly to 24 Vdc . They provide extremely stable, regulated low voltage without the need for a step down transformer saving space and money.

SolaHD now offers a DC UPS to provide back-up power to the power supply in the event of a blackout.

## Linear vs. Switcher

SolaHD has provided both linear and switching technology products for many years. As a leading supplier of power products to the industrial market, both technologies are still important. Switching technology (most of SolaHD's DIN Rail line) is the predominant method of AC-DC conversion for almost any type of electronic system sold today in the world, from PLCs to desktop PCs.

Linear Power Supplies for a broad range of applications

The small size, lightweight and high efficiency of the switching products give them significant advantages over the linear technology products (SolaHD's SL Series). SolaHD switching products provide well filtered and regulated DC of typically less than $1 \%$ deviation from the nominal output voltage.

Linears are about $50 \%$ efficient while their switching counterparts are typically over 80\% efficient. Switchers are light enough to mount on a DIN Rail, while only the smallest linears are capable of being securely mounted to a DIN Rail. Linears are still popular today because they do provide very tight regulation (<.01\% typically), almost perfectly clean DC, fast transient response and their low component count helps provide a lower material cost for its user. Linears are typically open frame because of the excessive heat dissipation from their low efficiency.

SolaHD's industry standard linears, however, are available with optional covers for safety. Most linears are recognized to UL 60950-1 but cannot meet the stricter temperature requirements of the UL 508 Listing, such as with SolaHD's DIN Rail power supplies.

## DC Power Supply Selection Worksheet

Power supplies can be selected by following the directions below. Enter your power requirements and a list of matching power supplies will list. You can also manually select a power supply by following the directions below:

1) Gather the required information.

- Input voltage and frequency?
- Wattage needed?
- Number of outputs?
- Voltage of each output?
- Amperage of each output?
- Don't forget to take into account the peak loading of each output.
- Battery Back-up?

2) Calculate the power (wattage) of the DC power supply you need. If more than one output is required, do the following calculation:

- Multiply the Voltage times the amperage of each output to calculate the wattage of each output. Next, add together the wattage of each output to get the total wattage for the supply.

3) Determine which models from the Power Supply Selection Chart (on the next page) meet all of the required specifications.
4) Reference www.solahd.com for the latest specifications sheets.
5) Check the mounting style, connections and physical size of the power supply to ensure its suitability for the intended application.
6) Check for applicable safety approvals for the country and application the power supply will be used in.

## SDN-C Compact DIN Rail Series

The SDN-C DIN rail power supplies are the next generation of the popular SDN series. These models combine high efficiency and compact size with new visual diagnostic LEDs to offer the most performance available from SolaHD Essential industrial features such as Sag Immunity, Power Factor Correction, and universal voltage input have been retained in this series. Wide temperature operating range and parallel operation capability make the new SDN-C units suitable to a variety of industrial applications.

## Applications

- Industrial Machine Control and Process Control
- Conveying Equipment
- Material Handling
- Vending Machines
- Packaging Equipment and Amusement Park Equipment
- Semiconductor Fabrication Equipment

## Features

- Compact packaging to save space on the DIN rail
- LED diagnostics for input and output status at a glance
- High MTBF
- PowerBoost ${ }^{\text {TM }}$ overload capability to start high inrush loads
- Accepts Universal voltage $85-264 \mathrm{Vac}, 50 / 60 \mathrm{~Hz}$ input 1 Phase and $320-540 \mathrm{Vac}, 50 / 60 \mathrm{~Hz}$ input 3 Phase
- Active Power Factor Correction (except SDN 5-24-480C and SDN 10-24-480C)
- Patented DIN rail mounting clip
- User Adjustable output voltage accessible via front face
- Parallel capability standard
- Large, rugged, accessible screw terminals
- Industrial grade design
- $-40^{\circ} \mathrm{C}$ to $60^{\circ} \mathrm{C}$ operation without derating (for Single phase models only)
- Fully tested and burned-in at factory
- Highly efficient switching technology
- Five year limited warranty

## SDN-C Specifications (Single Phase)

| Description | Catalog Number |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | SDN 5-24-100C | SDN 10-24-100C | SDN 20-24-100C | SDN 40-24-100C |
| Input |  |  |  |  |
| Nominal Voltage | 100-240 Vac |  |  |  |
| -AC Range | 85-264 Vac |  |  |  |
| -DC Range | 90-375 Vdc |  |  |  |
| -Frequency | $43-67 \mathrm{~Hz}$ |  |  |  |
| Nominal Current ${ }^{1}$ | 1.65-0.55 A | 3.2-1.0 A | 6-3A | 12-4 A |
| -Inrush current max. | Typ. < 15 A | Typ. $<30 \mathrm{~A}$ | $<40 \mathrm{~A}$ | Typ. <60 A |
| Efficiency (Losses ${ }^{2}$ ) | > 88\% typ. (14 W) | > 90\% typ. (24 W) | > 92\% (38 W) | > 93 \% (67 W) |
| Power Factor Correction | Active power factor correction typ. 0.98 @ 115Vac/ 0.92 @ 230Vac |  |  |  |
| Output |  |  |  |  |
| Nominal Voltage ${ }^{3}$ | 24 V (23.5~28.5 Vdc Adj.) |  |  |  |
| Initial Voltage Setting | $24.5 \mathrm{~V} \pm 1 \%$ |  |  |  |
| -Tolerance | $< \pm 2$ \% overall (combination Line, load, time and temperature related changes) |  |  |  |
| -Ripple ${ }^{4}$ | < 50 mVpp |  | < 100 mVpp |  |
| PARD <br> (Periodic and Random Deviation) | 100 mVpp max |  |  |  |
| Nominal Current (Rated Power) | 5 A (120 W) | 10 A (240 W) | 20 A (480 W) | 40 A (960 W) |
| Parallel Operation | Switch selectable single unit or parallel unit operation. Units will not be damaged by parallel operation (regardless of switch position setting). |  |  |  |
| Turn On Time | $<1 \mathrm{~s}$ after AC is applied to input at full resistive load ( $\mathrm{Tamb}=+25^{\circ} \mathrm{C}$ ). $<1.5 \mathrm{~ms}$ With capacitive load $7000 \mu \mathrm{~F}$ |  |  |  |
| Holdup Time | $>20 \mathrm{~ms}$ (Full load, 100 Vac Input @ $\mathrm{T}_{\text {amb }}=+25^{\circ} \mathrm{C}$ ) to $95 \%$ output voltage |  |  |  |
| Voltage Fall Time | $<150 \mathrm{mS}$ from $95 \%$ to $10 \%$ rated voltage @ full load ( $\mathrm{T}_{\text {amb }}=+25^{\circ} \mathrm{C}$ ) |  |  |  |
| Protection |  |  |  |  |
| -Short Circuit Current | Voltage output automatically goes to near zero and output is protected from continuous short circuit. Auto-recovery. |  |  |  |
| -Peak Current ${ }^{5}$ | $1.5 \times$ Nominal Current for $>4$ seconds minimum while holding voltage $>20 \mathrm{Vdc}$ |  |  |  |
| -Current Limit | PowerBoost ${ }^{\text {TM }}$ |  |  |  |
| Back EMF Immunity | < 35 V No damage, Auto-recover |  |  |  |
| Overvoltage Protection | > 30.5 but < 33 Vdc , auto recovery |  |  |  |
| Over Temperature Protection | LED Alarm and Output shutdown , Auto-recovery |  |  |  |
| Environmental Data |  |  |  |  |
| Emissions | EN61000-6-4, EN61000-6-3,, Class B EN55011, Class B EN55022 Radiated and Conducted including Annex. A, EN61000-3-2 Class A |  |  |  |
| Immunity | EN61000-6-1, EN61000-6-2 , EN61000-4 Series (-2, -4 INPUT, -5 INPUT ,-8) Level 4, Performance Criteria A , and, (-3,- 4 OUTPUT,- 5 OUTPUT, -6) Level 3, Performance Criteria A SEMI F47 Sag Immunity and, IEC 61000-4-34 voltage dip immunity standard |  |  |  |
| General Protection/ Safety | Protected against continuous short -circuit, continuous overload, continuous open circuit. <br> Pollution Degree 2, Protection Class 1 (IEC536), degree of protection IP20 (IEC60529) Safe extra low voltage: SELV (IEC60950-1) |  |  |  |
| Temperature ${ }^{6}$ | Storage: $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$, Operation $-40^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$ full power, with linear derating to $75 \%$ power from 60 to $70^{\circ} \mathrm{C}$ (Convection cooling, no forced air required). Operation up to $50 \%$ load permissible with sideways or front side up mounting orientation. |  |  |  |
| Humidity | 5 to 95 \% RH Non- Condensing; IEC 60068-2-2, 68-2-3 |  |  |  |
| Vibration | $2.5(\mathrm{~g}) \mathrm{RMS}, 10-2000 \mathrm{~Hz}$ (random); three axes for 20 minutes each - IEC 60068-2-6 |  |  |  |
| Shock | 10(g) RMS, three axes, 11mseconds for each axis - IEC 60068-2-27 |  |  |  |
| Altitude | 0 to 6000 meters (0 to 19,600 feet) |  |  |  |

1. Input current ratings are conservatively specified with low input, worst case efficiency and power factor.
2. Losses are heat dissipation in watts at full load, nominal input line.
3. $24-28 \mathrm{Vdc}$ adjustable guaranteed at full load.
4. Ripple/noise is stated as typical values when measured with a 20 MHz , bandwidth scope and 50 Ohm resistor
5. Peak current is calculated at 24 Volt levels.
6. All models are capable of paralleling. Only the 40A uses Active paralleling scheme. Please refer to user manual for details.

| Emissions | EN61000-6-4, EN61000-6-3, Class B EN55011, Class B EN55022; Radiated and Conducted, EN61000-3-2 Class A |  |  |  |
| Immunity | EN61000-6-1, EN61000-6-2, EN61000-4 Series (-2, -4 INPUT, -5 INPUT ,-8) Level 4, Performance Criteria A and ( $-3,-4$ OUTPUT,- 5 OUTPUT, -6) Level 3, Performance Criteria A SEMI F47 Sag Immunity and IEC 61000-4-34 voltage dip immunity standard |  |  |  |
| General Protection/ Safety | Protected against continuous short -circuit, continuous overload, continuous open circuit. <br> Pollution Degree 2, Protection Class 1 (IEC536), degree of protection IP20 (IEC60529) Safe low voltage: SELV (acc. IEC60950-1) |  |  |  |
| Temperature ${ }^{7}$ | Storage: $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$, Operation $-40^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$ full power, with linear derating to $75 \%$ power from 60 to $70^{\circ} \mathrm{C}$ (Convection cooling, no forced air required). Operation up to $50 \%$ load permissible with sideways or front side up mounting orientation. |  |  |  |
| Humidity | 5 to 95 \% RH Non- Condensing, IEC 60068-2-2, 68-2-3 |  |  |  |
| Vibration | $2.5(\mathrm{~g}) \mathrm{RMS}, 10-2000 \mathrm{~Hz}$ (random); three axes for 20 minutes each - IEC 60068-2-6 |  |  |  |
| Shock | 10(g) RMS, three axes, 11mseconds for each axis - IEC 60068-2-27 |  |  |  |
| Altitude | 0 to 3000 meters (0 to 10,000 feet) |  |  |  |

1. SDN 20 and SDN 40 will operate at $50 \%$ load under loss of 1 phase on nominal line input ; SDN 5 and SDN 10 will operate with single phase input power at $100 \%$ of load. Unit will shut down if thermal threshold is exceeded under this condition.
2. Unit passed input voltage overstress test at 700 Vac without failure.
3. Input current ratings are specified with low input, line conditions, worst case efficiency values and power factor spikes. Input current at nominal input settings will typically be half these values.
4. Losses are heat dissipation in watts at full load, nominal line.
5. $24-28 \mathrm{Vdc}$ adjustable guaranteed at full load
6. Ripple/noise is stated as typical values when measured with a 20 MHZ , bandwidth scope and 50 Ohm resistor
7. All models are capable of paralleling. Only the 40A uses Active paralleling scheme. Please refer to user manual for details.
8. SDN 20 and SDN 40 are capable of delivering $150 \%$ load for approximately 4 s before the unit will go to HICCUP mode. SDN 5 and 10 will maintain minimum 4 s to deliver $150 \%$ load then drops to almost zero Vout. The output voltage will immediately drop to almost zero when load rises above 150\%.

SDN 40-24-100C and SDN 40-24-480C output signaling terminal block features: Shut Down, Power Good, Current Monitor, Current Balance, GND, and active current sharing through I_SHARE connectors (See Signals Manual for connection information).

## SDN-C Series Mounting

## Chassis Mounting

Instead of snapping a SolaHD SDN ${ }^{\top M}$ unit on the DIN Rail, you can also attach it using the screw mounting set SDN-PMBRK3.

This set consists of two metal brackets, which replace the existing two aluminum profiles.

Detachment from DIN Rail:

## DIN Rail Mounting

Snap on the DIN Rail:

1. Tilt unit slightly backwards. Put it onto the DIN Rail

2. Push downwards until stopped
3. Push at the lower front edge to lock
4. Shake the unit slightly to ensure that the retainer has locked

Alternative Panel Mount: Using the optional SDN-PMBRK3 accessory, the unit can be screw mounted to a panel.

(4) Click

## SDN-P DIN Rail Series

The SDN DIN Rail power supplies provide industry leading performance. Sag Immunity, transient suppression and noise tolerant, the SDN series ensures compatibility in demanding applications. Power factor correction to meet European directives, hazardous location approvals and optional redundant accessories allow the SDN series to be used in a wide variety of applications. Wide operation temperature range, high tolerance to shock and vibration and reliable design make the SDN series the preferred choice of users.

## Applications

- Industria//Machine Control
- Process Control
- Conveying Equipment
- Material Handling
- Vending Machines
- Packaging Equipment
- DeviceNet™
- Amusement Park Equipment
- Semiconductor Fabrication Equipment

## Features

- Power Factor Correction (per EN61000-3-2)
- Auto Select $115 / 230 \mathrm{Vac}, 50 / 60 \mathrm{~Hz}$ Input
- Improved metal mounting clip
- DC OK Signal
- Adjustable Voltage
- Parallel Capability standard on all units
- Industrial grade design
- $-10^{\circ} \mathrm{C}$ to $60^{\circ} \mathrm{C}$ operation without derating. Indefinite short circuit, overvoltage and overtemperature protection.
- Powers high inrush loads without shutdown or foldback
- Rugged metal case and DIN connector
- Narrow width on rail for space critical applications
- User-friendly front panel
- Large, rugged, accessible, multiple connection screw terminations
- Easy installation
- 12 Vdc and 48 Vdc single phase models available
- Highly efficient $>90 \%$ switching technology
- High MTBF and reliability

## Accessories

- SDN-C Redundant Modules
- Chassis Mount Bracket (SDN-PMBRK2)

## Chassis Mounting

Dimensions - in. (mm)
Instead of snapping a SolaHD SDN™ unit on the DIN Rail, you can also attach it using the screw mounting set SDN-PMBRK2.

This set consists of two metal brackets, which replace the existing two aluminum profiles.

## SDN ${ }^{\text {TM }}$ Series Redundant Options

The SDN Series standard options allow for operation in a wide variety of applications. With the addition of an external redundancy module, the SDN can also be used for true redundant operation including 2 N and $\mathrm{N}+\mathrm{x}$ configurations.

All SDN units include built in current sharing for parallel and redundant operation. The external modules SDN 2.5-20RED and SDN 30/40RED increase the reliability by isolating the supplies and adding more signal options. Paralleling for increased power does not require the use of these modules.

## Module Compatibility

Two separate modules are available to provide the maximum flexibility in size, cost and signaling capability. Refer to the chart below for information on which module can be used for each SDN power supply.

Power Rating - A simple Yes or No indication that this module can or cannot handle the power rating of that power supply.

Input/Output Signals - Yes indicates that each power supply would have an independent relay contact to provide power supply status, and the DC bus output from the redundant module has it's own DC OK relay contact. Output only indicates that only the output of the redundant module would have a DC OK relay contact.

## Applications

- Process Control
- Remote Location
- Critical Production

## Features

- DC OK Relay Contact
- True Isolation
- High availability
- SDN features and quality

[^6]SDNTM Redundant Series Specifications for SDN2.5-20RED and SDN 30/40RED

| Catalog Number |  |  |
| :---: | :---: | :---: |
| Description | SDN 2.5-20RED | SDN 30/40RED |
| Concept |  |  |

By means of a separate redundancy module, you can interconnect several identical SDN power supply units in a $\mathrm{N}+1$ redundant mode. These external modules decouple the power supply outputs from each other so that, in case of failure, one power supply unit cannot overload the other units. The modules incorporate DC OK relay contacts. The switch on front of the SDN power supply should be placed in parallel mode (not single mode) when power supplies are used with redundant module.

| Electrical Characteristics |  |  |

Wiring Diagram for SDN 2.5 -20RED

## Notes:

1. The Common (marked "COM -") connection to the module is required for voltage monitoring (DC OK Contacts), and is not meant to be part of the current path from the power supply to the load.
2. Protective earth connection only provides protective ground to the metal case of the module. This connection is isolated from the positive and common connections.

Wiring Diagram for SDN 30/40RED

Notes:

1. The Common (marked "COM -") connection to the module is required for voltage monitoring (DC OK Contacts), and is not meant to be part of the current path from the power supply to the load.
2. Protective earth connection only provides protective ground to the metal case of the module. This connection is isolated from the positive and common connections.

## SDN-C Redundancy Modules

## Module Compatibility

The SDN-C Series redundant options allow for operation in a wide variety of applications. With the addition of an external redundancy module, the SDN can also be used for true redundant operation including 2 N and $\mathrm{N}+\mathrm{x}$ configurations.

These active MOSFET based modules provide redundancy with significantly higher efficiencies and lower voltage drop than traditional diode based modules. Higher efficiency results in less heat produced, saving space and resulting in better system reliability.

All SDN units include built in current sharing for parallel and redundant operation. These external modules increase the reliability by isolating the supplies and adding more signal options. Paralleling for increased power does not require the use of these modules. However, the isolation and ease of current balancing may be beneficial in the application.

## Module Compatibility

Refer to the chart below for information on which module can be used for each SDN power supply.

## Applications

- Process Control
- Remote Location
- Critical Production

## SDPTM Low Power DIN Rail Series

The compact, lightweight DIN Rail power supplies come in output voltages from 5 to 48 Vdc and power ratings of up to 100 Watts. These extra small, efficient units are designed specifically for the industrial environment. Each unit is rated from $-10^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}$, with no derating necessary until above $60^{\circ} \mathrm{C}$.

Many extra "industrial" features are standard for the SDP PowerBoost ${ }^{\text {TM }}$ overload circuitry can start up industrial loads (i.e. motors, relays, solenoids and DC-DC converters), that can cause ordinary power supplies to foldback or shutdown. Each unit contains a DC indicator and front panel adjustment potentiometer. With the SolaHD SDP series, you can count on a high grade design.

## Applications

- Industrial Control
- Machine Control
- Building Automation
- Instrumentation

## Features

- Adjustable output
- PowerBoost ${ }^{\text {TM }}$ industrial overload design
- Overvoltage, short circuit protection
- Continuous short circuit protection
- Low output noise
- Screw terminal connections
- Three year limited warranty

## Certifications and Compliances

## SVL Essential DIN Rail Series

SVL Series power supplies are perfect for high volume, controlled environment applications where essential features are the only requirement. When space inside an enclosure is at a premium, their small footprint makes these power supplies an excellent alternative to embedded open frame switchers. The DIN rail mounting capability provides quicker and easier installation while allowing for design flexibility. These power supplies range from 15 to 480 Watts in 5,12 , 24 and 48 Volt combinations.

## Applications

- Test and Measure Equipment
- Scanners
- Instrumentation
- Printers Peripheral
- ATM Machines
- Semiconductor Fabrication Equipment
- Vending Machines

## Features

- Universal Input
- Protection
- Short Circuit
- Over Voltage
- Overload
- Over Temperature
- Power Factor Correction
- Convection Cooling
- Blinking OCP Diagnostic
- DC OK LED
- DC OK Relay for >120 Watts models
- Two year limited warranty

These switchers are compact, rugged power supplies designed to power many of your industrial control and instrumentation devices and equipment, with high reliability and tight regulation through the most difficult factory-floor conditions around the globe. "User friendly" applies to these unique power supplies that feature easy-to-install DIN Rail and chassis mounting. Terminations are also easy to access (AC and DC terminations are well separated) and simple to wire. Safety is another aspect where the SCP distinguishes itself. The encapsulated design meets IP20 specifications, and the wide range of voltages will reliably support almost any low-power device in your cabinet or system for years to come.

## Features

- International approvals for global use
- DIN Rail or Chassis Mount
- Rugged, encapsulated design to resist environment
- IP20 protection
- Many output voltages, 3.3-48 Volts; single, dual, triple
- Five year limited warranty

## Packaging and Mounting Specifications

- Simple snap-on for DIN Rail TS35/7.5 or TS35/15
- M3 screw clamp terminations
- Chassis mounting possible on -DN Low-Profile versions by removing DIN clips (simply unscrew at the back of the unit).

## SCD Series, Encapsulated, Industrial DC to DC Converter

These compact, rugged DC to DC converters are power supplies designed to power industrial control instrumentation devices and equipment where $A C$ power is not convenient or accessible. With high reliability and wide input range, these units can operate through the most difficult factory floor conditions around the globe. "User friendly" applies to these unique power supplies that feature easy-to-install DIN Rail and chassis mounting. Terminations are also easy to access and simple to wire. Encapsulated design meets IP20 specifications for use in harsh environments.

## Applications

These units regulate voltage for sensitive electronic equipment run from battery power. For example, a 24 Vdc battery system where the battery voltage can be 30 volts, sometimes higher during charging, and dip below 22 volts under heavy load. The SCD can be used to stabilize the voltage for those devices not designed to handle wider voltage swings.

They are also a convenient and inexpensive alternative to running AC power through a large industrial machine. The SCD can use 24 Vdc commonly available on many parts of the machine to create other voltages needed to run sensors, transducers and other devices that the machine requires to work properly.

- Industrial
- Encoders, special sensors, communications and instrumentation
- Telecommunications systems
- Remote Site/Harsh Environment

## Features

- DIN Rail or Chassis mount by removing DIN clips
- Rugged, encapsulated design to resist environment
- IP20 protection
- Wide 20 to 72 Vdc input range
- M3 screw clamp terminations
- Simple snap-on for DIN Rail TS35/7.5 or TS35/15
- Galvanic isolation
- Five year limited warranty

## Options and Accessories

- SCP-MDC - Pair of metal DIN clips
- SCP-PDC - 1 plastic DIN clip with lever for removal from rail

## Certifications and Compliances

- ©ULUs Listed, Ind. Control Equip., E61379
- UL 508/CSA C22.2 No. 107.1
- ${ }^{7} \mathbf{N}_{\text {us Recognized Component, ITE, E137632 }}$
- UL 60950/CSA C22.2 No. 234-M90
- CE-IEC/EN60950-1
- IP20
- RoHS Compliant

## Silver Line Series - Single \& Multi-Output Linears

The Silver Line series follows the industry accepted footprint for open frame, linear power supplies. Standard screw terminal connections and optional covers are offered for safety considerations.

## Applications

- Industrial Control Circuits and Components
- Instrumentation
- Drives
- CNC Machinery
- Equipment for food industry
- Microprocessor Circuits
- Analog Circuits
- Noise sensitive Circuitry and Sensors

## Features

- Easy-to-install screw terminal connections
- Cover options
- Industry standard footprint
- Universal input and approvals (115/230 Vac)
- Low noise, extremely quiet DC output. For noise sensitive or analog circuitry.
- Fast transient response. Ideal for test applications.
- Built-in OVP on 5 V models and optional on 12, 15 and 24 V models
- Automatic resetting overload protection
- Short circuit protected
- Two year limited warranty

## Certifications and Compliances

- c $\boldsymbol{M}_{\text {us }}$ Recognized Component, ITE
- UL 60950-1
- © Certified, ITE
- CSA C22.2 CSA 60950-1
- C
- IEC60950-1
- RoHS Compliant

Specifications

| Parameter | Condition | Limit |
| :---: | :---: | :---: |
| Input |  |  |
| Input Voltage |  | 100/120/220/230/240 Vac Selectable |
| Input Frequency |  | $47-63 \mathrm{~Hz}$ |
| Output |  |  |
| Line Regulation | for 10\% change | 0.05\% |
| Load Regulation | for 50\% change | 0.05\% |
| Ripple |  | 3.0 mV maximum Peak-to-Peak |
| DC Output Adjustment Range |  | $\pm 5 \%$ Minimum |
| Overvoltage Protection |  | All 5-Volt outputs include build-in OVP as standard (setting is $6.2 \mathrm{~V} \pm 0.4 \mathrm{~V}$ ) OVP is optionally available on other types |
| Transient Response Time | at 50\% Load Changes | 50 msec. |
| Overload Protection |  | Automatic current limit foldback |
| Remote Sensing | Available to compensate for output voltage drop on selected models. | 0.5 Vdc |
| General |  |  |
| Operating Temperature Range | Derate to $40 \%$ at $+70^{\circ} \mathrm{C}$ | 0 to $+50^{\circ} \mathrm{C}$ |
| Storage <br> Temperature Range |  | $-25^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ |
| Temperature Coefficient (Typical) |  | 0.01\% $0^{\circ} \mathrm{C}$ |
| Stability | After warm-up | $\pm .5 \%$ |
| EMI/RFI | Linear power supplies have inherently low conducted and radiate noise levels | For most system applications they will meet requirements of FCC Class B and VDE 0871 for Class B |
| Cover Option | Derate power by an additional 15\% |  |
| Cooling | Forced air. 20 CFM required for full rating Derate 30\% without cooling |  |

Specifications are typical. Load Regulation on outputs without Remote Sense, .1\% typical.

## IP67 SCP-X Extreme Environment Series

The IP67 SCP-X power supplies provide the versatility and cost-efficiency to deliver reliable distributed and remote field power to machine controls. Mounts directly on the machine or production line eliminating the complexity and cost of unnecessary enclosures and excess wiring. Quick change connectors simplify connectivity for distributed I/O devices on industrial machinery. These Class 2 Listed, 24 Vdc power supplies are available in single and dual 100 Watt models and are perfect for automotive, packaging and automated distribution applications.

## Control Output Models

Designed for Control Power applications where a grounded power supply output is required.

- Input connector: 3-PIN IP67 molded plug externally threaded with 7/8"-16 UN mounting thread.
- Output connector: 4-PIN IP67 molded receptacle internally threaded with $7 / 8^{\prime \prime}-16$ UN mounting thread.

## Isolated Output Models

Designed for application where an isolated output from ground is required such as DeviceNet ${ }^{T \mathrm{M}}$.

- Input connector: 3-PIN IP67 molded plug externally threaded with $7 / 8^{\prime \prime}-16$ UN mounting thread.
- Output connector: 4-PIN IP67 molded receptacle internally threaded with $7 / 8^{\prime \prime}-16$ UN mounting thread.

## Features

- IP66/67 rated versatile enclosure
- $24 \mathrm{Vdc}, 100-240 \mathrm{Vac}$, up to four outputs at 3.8 A Nominal Current (per pair for dual models)
- Class 2 Listed power supply for stand alone applications
- Can be mounted in any orientation without limitation

1. Input current ratings are specified with low input, line conditions, worst case efficiency values and power factor.
2. Power Factor Correction at $50 / 60 \mathrm{~Hz}$ only.
3. Ripple/noise is stated as typical AC values when measured with a 20 MHZ bandwidth scope and 50 Ohm termination.
4. Emissions and immunity are met by individual power supply modules.

## GL Series: Single \& Multi Output Switchers

The new GL series provides a broad range of AC/DC power supply solutions that covers power ratings from 25 watts to 250 watts for use in various industrial applications requiring standard footprint size and very high reliability.

These low-profile AC/DC switchers offer universal input voltage with no switches or jumpers, ideal for higher volume worldwide applications.

## All models feature:

- Industry standard footprints
- Universal input
- Full power to $50^{\circ} \mathrm{C}$
- High demonstrated MTBF
- Automatic overvoltage protection
- Overload protection
- Built-in EMI Filtering
- Extensive safety approvals
- Derated operation to $70^{\circ} \mathrm{C}$
- $\pm 2 \%$ regulation on main output
- 250 VA size enclosed
- Two year limited warranty

## Many models feature:

- EN61000-3-2 Compliance
- Supervisory outputs (5 V/12 V)
- Wide-adjustable floating $4^{\text {th }}$ output
- Single wire current share
- Remote Sense
- Adjustable main output
- Power Fail and DC Good signals
- Wide-adjustable on single output models

## Certifications and Compliances

| Adjustment Range on Main Output | $-5,+10 \%$ minimum | $\pm 20 \%$ minimum for single output only models | $-5,+10 \%$ minimum | 2:1 wide ratio |
| Hold-up <br> Time | 20 ms @ full load, 115 Vac nominal line | 10/20 ms 115/230 Vac Input line | $20 \mathrm{~ms} \mathrm{@} \mathrm{full} \mathrm{load}$,115 Vac nominal line | $20 \mathrm{~ms} \mathrm{@} \mathrm{full} \mathrm{load}$,115 Vac nominal line |
| Overload | Short circuit protection on all outputs. Primary overload protection |  |  |  |
| Overvoltage Protection | 5 V output; 5.7 to 6.7 Vdc . Other outputs 10\% to 25\% above nominal output | 30-50\% above nominal output | 5 V output; 5.7-6.7 Vdc. Other outputs $10 \%$ to $25 \%$ above nominal output | ```5V output: 5.7 to 6.7 Vdc. Other outputs 10% to 25% above nominal output``` |
| Remote Sense | Compensates for 0.5 V lead drop minimum; Will operate without remote sense connected, Reverse connection protected |  |  |  |
| General |  |  |  |  |
| Temperature ${ }^{2}$ | Storage: $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$; Operating: $0^{\circ}$ to $50^{\circ} \mathrm{C}$ ambient. Derate each output $2.5 \%$ per degree from $50^{\circ}$ to $70^{\circ} \mathrm{C},-20^{\circ} \mathrm{C}$ start up. |  |  |  |
| Electromagnetic Susceptibility | Designed to meet IEC 801, -2, -3, -4, -5, -6, Level 3 or EN61000-4; $-2,-3,-4,-5,-6,-8,-11$ Level 3 |  |  |  |
| Humidity | Operating; non-condensing up to 95\% RH |  |  |  |
| Vibration | Three orthogonal axes, sweep at 1 oct $/ \mathrm{min}, 5 \mathrm{~min}$. dwell at four major resonances 0.75 G peak 5 Hz to 500 Hz (2 G peak 8 Hz to 500 Hz for GL500) |  |  |  |
| MTBF | $>550,000$ hours demonstrated at full load and $25^{\circ} \mathrm{C}$ ambient conditions |  |  |  |
| Safety | EN60950, cRUus: UL/CSA 60950 E132002, CE Mark (LVD) |  |  |  |

Notes:

1. Proper circuit protection required when operating with a DC input voltage. 2. Regulation and ripple may deviate from the spec at $-20^{\circ} \mathrm{C}$ start up.

## Notes:

[ ] Rating with 30 CFM of air

1. Power rating when no cover option is used
2. Power rating when the cover/enclosure option is used
3. Refer to GL Series Dimensions and the sections that follow
4. Floating output
5. Approximate minimum loading: 10\%
6. Optional fan cover, See Table 1
7. Optional end fan cover, See Table 1

## GL Series Dimensions

Case 2
(Weight: $0.45 \mathrm{lbs} / 0.20 \mathrm{~kg}$ approx.)

Case 3
(Weight: $0.41 \mathrm{lbs} / 0.18 \mathrm{~kg}$ approx.)

Case 4
(Weight: $0.75 \mathrm{lbs} / 0.34 \mathrm{~kg}$ approx.)

Notes:

1. Specifications subject to change without notice.
2. All dimensions in inches (mm), tolerance is $\pm 0.02$ " ( $\pm 0.5 \mathrm{~mm}$ )
3. Mounting holes M1 and M2 should be grounded for EMI purposes.
4. Mounting hole M1 is safety ground connection.
5. Specifications are for convection rating at factory settings at 115 Vac input, $25^{\circ} \mathrm{C}$ unless otherwise stated.

## GL Series Dimensions (continued)

Case 5
(Weight: $2.6 \mathrm{lbs} / 1.19 \mathrm{~kg}$ approx.)

## Notes:

1. Specifications subject to change without notice.
2. All dimensions in inches (mm), tolerance is $\pm 0.02$ ".
3. Specifications are at factory settings.
4. To enable normally closed remote inhibit, cut jumper J1
5. Mounting maximum insertion depth is 0.12 ".

Case 6
(Weight: $3.1 \mathrm{lbs} / 1.41$ kg approx.)

## SHP Series: Heavy Duty Modular Power Supplies

This new generation of high power, intelligent modular power supplies, range from 1500 through 4920 watts and were designed for optimum flexibility. The modular design makes these units easy to customize for unusual voltage and power combinations, and the intelligent modules allow the use of $I^{2} \mathrm{C}$ or CANBUS/RS485 communication to monitor and control many attributes of the power supply.

All units have power factor corrected inputs, an end mounted fan for cooling and a variety of built-in signals and controls. High reliability and a flexible design make these power supplies an excellent choice for process control and semiconductor fabrication applications.

## Applications

- Process Controls
- Semi-Conductor Fabrication
- Automated Service Equipment

## Features

- Available in intelligent and non-intelligent models
- Single, dual and triple output modules configurable in combinations up to 24 different outputs
- Single phase and three phase inputs
- ${ }^{2} \mathrm{C}$ control in intelligent modules
- End mounted intelligent fan (speed control/fault status)
- Voltage adjustment on all outputs (manual or $\mathrm{I}^{2} \mathrm{C}$ )
- CANBUS and RS-485 optional interface
- Overload protection on all outputs
- Power factor correction (. 99 typ.)
- Configurable output UP/DOWN sequencing
- Modular Construction
- Configurable input and output OK signals and indicators
- Programmable voltage, current limit, inhibit/enable through $I^{2} \mathrm{C}$
- Three year limited warranty

## Certifications and Compliances

- c M $_{\text {us UL Recognized Component, ITE, E137632 }}$
- UL 60950-1/CSA C22.2 No. 60950-1, 2nd Edition
- CE - Low Voltage Directive
- IEC/EN 60950-1, 2nd Edition
- RoHS Compliant

## Related Products

- Surge Protective Devices
- SCD DC to DC Converters
- Active Tracking ${ }^{\circledR}$ Filters

## Standard Offering Selection Table

| Catalog Number | Output Voltage | Output Current | Watts |
| :---: | :---: | :---: | :---: |
| SH30-4LS-0Z | 12 V | 125 A | 1500 |
| SH30-4NS-0Z | 15 V | 100 A | 1500 |
| SH30-4QS-0Z | 24 V | 62 A | 1500 |
| SH30-4RS-0Z | 28 V | 53 A | 1500 |
| SH30-4WS-0Z | 48 V | 31 A | 1500 |
| SH45-4QS-3QS-4Z | 24 V | 92 A | 2000 |

## Accessories Table

| Catalog Number | Description |
| :---: | :---: |
| $73-769-001$ | USB to I ${ }^{2} \mathrm{C}$ adapter |
| $70-841-004$ | Mating Connector Kit for Control \& Signals (J1 Connector) |
| $70-841-023$ | Mating Connector Kit for I²C Interface (J2 Connector) |

## Specifications

| Description | SH30 | SH45 | S3H3 | S3H5 |
| :---: | :---: | :---: | :---: | :---: |
| Input |  |  |  |  |
| Input voltage range | 90-264 Vac; 120-300 Vdc; Single-phase |  | 170-264 Vac; Three-phase |  |
| Frequency | $47-63 \mathrm{~Hz}$ |  |  |  |
| Inrush current | 40 A peak maximum (soft start) |  |  |  |
| Efficiency | Up to 85\% at full load |  |  |  |
| Power factor | 0.99 typical |  |  |  |
| Turn-on time | AC on 1.5 s typical, inhibit/enable 150 ms typical, configurable through $I^{2} \mathrm{C} ; 50 \mathrm{~ms}$ internal turn-on delay (dual output only) |  |  |  |
| Hold-up time | 10 ms minimum |  |  |  |
| AC OK | $>5 \mathrm{~ms}$ early warning before outputs lose regulation, full cycle ride through at 50 Hz , configurable through $\mathrm{I}^{2} \mathrm{C}$ |  |  |  |
| Output |  |  |  |  |
| Output voltage range | $\pm 10 \%$ minimum for all outputs, user-adjustable pot, full adjustment range using ${ }^{12} \mathrm{C}$ |  |  |  |
| Factory set point accuracy | 0.01 |  |  |  |
| $\mathrm{I}^{2} \mathrm{C}$ output program accuracy | $\pm 5 \%$ |  |  |  |
| Margining | $\pm 4-6 \%$ nominal analog (single output module only) |  |  |  |
| Line/load regulation | $0.4 \%$ or 20 mV maximum (1\% maximum for 1500 W module) |  |  |  |
| Ripple | RMS: $0.1 \%$ or 10 mV maximum; Pk-Pk: $1.0 \%$ or 50 mV maximum; bandwidth limited to 20 MHz |  |  |  |
| Dynamic response | <2\% or 100 mv with $25 \%$ load step |  |  |  |
| Recovery time | Within $1 \%$ in $<300 \mu \mathrm{~s}$ |  |  |  |
| Overcurrent protection | Single output module and main output of the dual output module 105-120\% of rated output current. Aux output of dual output module $105-140 \%$ of rated output current. Special programmable OCP delay on 1500 W module from 100 ms to 25.5 s with shutdown features. Configurable through $I^{2} \mathrm{C}$ with load calibration required (except for 1500 W module). |  |  |  |
| Short-circuit protection | Protected for continuous short-circuit; recovery is automatic upon removal of short. Shutdown mode available on the 1500 W module. |  |  |  |
| Overvoltage protection | Single output module: 2-5.5 V, 122-134\%; 6-60 V, 110-120\%; Dual output module: 2-6 V, 122-134\%; 8-28 V, 110-120\% Triple output module: No overvoltage protection provided; Configurable through $I^{2} \mathrm{C}$ |  |  |  |
| Thermal protection | All outputs are disabled when the internal temperature exceeds the safe operating range; configurable through $I^{2} \mathrm{C}$ |  |  |  |
| Remote sense | Up to 0.5 V drop (not available on triple output module) |  |  |  |
| Single wire parallel | Current share to within $2 \%$ of total rated current |  |  |  |
| DC OK | $\pm 5 \%$ of nominal; configurable through ${ }^{2} \mathrm{C}$ |  |  |  |
| Minimum load | Not required |  |  |  |
| Housekeeping bias voltage | 5 V dc @ 1.0 A maximum present whenever ac input is applied |  |  |  |
| Module inhibit | Configured and controlled through $\mathrm{I}^{2} \mathrm{C}$ |  |  |  |
| Output/output isolation | $>1 \mathrm{M} \Omega, 500 \mathrm{~V}$ |  |  |  |
| Global inhibit/enable | TTL, Logic "1" and Logic "0"; configurable through ${ }^{12} \mathrm{C}$ |  |  |  |
| Environmental |  |  |  |  |
| Operating temperature | $-40^{\circ} \mathrm{C}$ to $+70^{\circ} \mathrm{C}$ ambient; derate each output $2.5 \%$ per degree from $50{ }^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}$ |  |  |  |
| Storage temperature | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ |  |  |  |
| Humidity | 10\% to 95\% RH, non-condensing |  |  |  |
| Vibration | IEC68-2-6 to the levels of IEC721-3-2 |  |  |  |
| MTBF demonstrated | >550,000 hr. @ full load, $220 \mathrm{~V} \mathrm{ac}, 25^{\circ} \mathrm{C}$ ambient |  |  |  |
| Safety |  |  |  |  |
| Electromagnetic susceptibility | EN61000-4-2, EN61000-4-4, EN61000-4-5 Level 3 |  |  |  |
| EMI filter | CISPR 22/EN55022 Level B when installed in a properly grounded and shielded metal enclosure |  |  |  |
| Radiated EMI | CISPR 22/EN55022 Level B when installed in a properly grounded and shielded metal enclosure |  |  |  |

Notes:

1) For dual \& triple output modules: the max output power is the total amount of power for the module.
2) For dual \& triple output modules: the max output current is the total max current for each output.
3) To calculate the total weight of the power supply: sum up the weight for each module and add it to the weight of the case given under the Specifications Table.

## Catalog Numbering Selection

## Intelligent Model

Example: 4500W case with: a 1500W module set at 24V @ 62.5A and a 750W module set at 24V @ 30A connected in parallel for a total of 24 V @ 92.5A single output.

## Design Choices

SolaHD offers a broad range of industrial control solutions for the most demanding industrial applications. Our products exceed NEMA ratings for inrush and regulation to ensure control systems are powered correctly. Electromagnetic control components demand inrush currents up to 10 times the transformer's nominal rating. While this inrush is occurring, the output side of the transformer must not fall below $85 \%$ of nominal as specified by NEMA ST-1, Part 4. Using a transformer that does not meet these ratings may cause erroneous shutdowns of downstream processes.

To meet your complete control needs, SolaHD's four series of control transformers, all of which exceed the NEMA standards. The Selection Chart can be used to identify the appropriate transformer for your application.

The SBE series is available from $50-5000 \mathrm{VA}, 55^{\circ} \mathrm{C}$ rise and features copper windings and encapsulation (through 1000 VA) for longer life and protection from the environment. This low temperature performance can mean smaller cabinet size or longer life for any electronic components that may be nearby.

The SMT series are $115^{\circ} \mathrm{C}$ rise, aluminum wound and for applications where good voltage regulation and higher power capacities (1000-5000 VA) are required.

The International series meets IEC requirements and IP20 (touch proof covers ordered separately for E models) for European applications.

The HSZ series rounds out SolaHD's line with an enclosed series of control transformers from 1-10 kVA that feature either a UL Listed Type 3R, 4, 4X or 12 enclosure. This unique design, featuring copper windings and encapsulated construction, can help system designers meet harsher environmental standards or design for a safer installation outside of a control cabinet. The HSZ series is for applications where cost or heat issues make mounting the transformer outside the control panel necessary.

SolaHD is pleased to offer custom transformers 1 kVA and larger. If you can't find what you are looking for here, we are happy to provide a quote on a custom transformer if available. Contact your local sales representative for more information.

## Sizing an Industrial Control Transformer

For proper transformer selection, three characteristics of the load circuit must be determined in addition to the minimum voltage required to operate the circuit. These are total steady state (sealed) VA, total inrush VA, and inrush load power factor.

A. Sealed VA - Total steady state sealed VA is the volt-amperes that the transformer must deliver to the load circuit for an extended period of time.
B. Inrush VA - Total inrush VA is the volt-amperes that the transformer must deliver upon initial energization of the control circuit. Energization of electromagnetic devices takes 30-50 milliseconds. During this inrush period the electromagnetic control devices draw many times normal current - 3-10 times normal is typical.
C. Inrush Load Power Factor is difficult to determine without detailed vector analysis of all the load components. Generally such an analysis is not feasible, therefore, a safe assumption is $40 \%$ power factor (PF). Until recently $20 \%$ PF was commonly used for transformer calculations, however, tests conducted on major brands of control devices indicate that $40 \% \mathrm{PF}$ is a safer default assumption.

## Selection Steps

1. Determine the supply and load voltages. The supply voltage is the available voltage to the control transformer. The load voltage is the operating voltage of the devices that will be connected to the transformer output.
2. Calculate the total sealed VA by adding the VA requirements of all components that will be energized together (timers, contactors, relays, solenoids, pilot lamps, etc.). Sealed VA data is available from the control device manufacturer.
3. Add the inrush VA of all components that will be energized together. Be sure to include the sealed VA of components that do not have an inrush, (lamps, timers, etc.) as they present a load to the transformer during maximum inrush.
4. Calculate selection inrush VA in one of the following two ways:
A. Selection inrush VA =

$$
\sqrt{(\text { VA sealed })^{2}+(\text { VA inrush })^{2}}
$$

## Alternative Method

B. VA sealed + VA inrush = Selection inrush

Method $B$ will result in a slightly oversized transformer.
5. If your line voltage varies $10 \%$ or more, contact Technical Services for assistance.
6. Utilizing the regulation data chart below, select the transformer VA needed for your application from the "Transformer VA Rating" column. Check to be sure that the nameplate VA rating exceeds the sealed VA of the control circuit calculated in Step 1. If it does not, select a larger transformer VA that exceeds the circuit sealed VA.
By following the above procedure, the secondary voltage delivered by the transformer will be $90 \%$ of the nameplate secondary voltage under maximum inrush conditions at rated input voltage.

Now refer to the selection tables on the following pages for the style you have chosen. Select your transformer according to your required voltage and VA capacity.

Regulation Data - Inrush VA at 20\% and 40\% Power Factor

## Choosing the Correct Series

The SBE series of industrial control transformers provide voltage regulation which exceeds NEMA standards. They have a $55^{\circ} \mathrm{C}$ rise and have copper windings and are 50/60 Hz rated. The SBE series can handle significant inrush with a minimal drop in output voltage.

The SMT series are $115^{\circ} \mathrm{C}$ rise, aluminum wound and are for applications where good voltage regulation and higher power capacities are required.

The International series have multiple voltage taps for easy application. These units also meet IEC 61558-1, 61558-2-2 and are CE marked for easy export to European countries.

The HSZ series is for applications where cost or heat issues make mounting the transformer outside the control panel necessary. This series has $80^{\circ} \mathrm{C}$ rise and has copper winding for industrial applications. These units are enclosed with UL Listed/NEMA Type 3R enclosures. Also available in UL Listed/NEMA Type 4, 4X and 12.

## The SBE - Encapsulated, Copper Wound Series

The SBE Encapsulated industrial control transformers are epoxy encapsulated to seal the transformer windings against moisture, dirt and industrial contaminants. Extra deep, molded terminal barriers reduce the chance of electrical failure as the result of arcing or frayed lead wires. The rugged construction and proven reliability of the SBE design is uniquely suited for all industrial environments.

## Features

- 50-1000 VA, $50 / 60 \mathrm{~Hz}$ - suitable for worldwide applications.
- Interleaved copper windings reduce I2R losses and maximize efficiency.
- $55^{\circ} \mathrm{C}$ Rise, $105^{\circ} \mathrm{C}$ insulation system to minimize heat
- Epoxy encapsulated to protect cores and coils against moisture, dirt, and other contaminants.
- Meets or exceeds NEMA Standard ST-1 and ANSI C89.1 for load inrush capability.
- Integrally molded, flame retardant (IEC 707/ISO Class 1210) Terminal Blocks provide greater terminal contact area and improved conductivity.
- Heavy gauge steel mounting plate
- Mounting dimensions are compatible with similar control transformers.
- Secondary fuse holders (FB2X) included for $13 / 32 \times 11 / 2$ cartridges (fuses not included).
- Factory-installed fuse holders are available (See W, WA \& WB options).
- Ten year limited warranty

## Certifications and Compliances

- ${ }^{(U L)}$ us Listed: E77014 - Type SBE
- UL 5085-1, UL 5085-2

## SBE - Open Style, Copper Wound - SBE performance in larger VA (1500-5000) sizes

The open style SBE Series provides voltage regulation in excess of NEMA recommendations without exceeding $55^{\circ} \mathrm{C}$ rise. These higher power capacity transformers are the best choice when $80 \%$ or more of the load components are electromagnetic devices.

## Features

- Interleaved copper windings reduce $I^{2}$ R losses and maximize efficiency.
- Ratings 60 Hz unless noted $50 / 60 \mathrm{~Hz}$
- Meets or exceeds electrical requirements of NEMA, ANSI, NMTBA and JIC
- $55^{\circ} \mathrm{C}$ rise, $105^{\circ} \mathrm{C}$ insulation system
- High quality silicon steel core

Certifications and Compliances

- (UL) Listed: E77014 - Type SZO
- UL 5085-1, UL 5085-2
- \$ Certified LR14328-4
- CSA C22.2 No. 66.1, No. 66.2
- RoHS Compliant

Note: Fuse holders are not available for this voltage configuration.

## SMT Series - Open Style, Aluminum Wound

The SMT series is economical and compact with traditional open wound varnished coils. Ratings are from 1 kVA through 5 kVA with Class $180^{\circ} \mathrm{C}$ insulation system and $115^{\circ} \mathrm{C}$ rise under full load. SMT transformers provide excellent cost benefits with NEMA regulation characteristics and electrical performance specifications.

## Features

- Available from 1000-5000 VA, 60 Hz unless noted
- Meets or exceeds electrical requirements of NEMA, ANSI, NMTBA and JIC

## Certifications and Compliances

- (UL) Listed: E77014 - Type SMT

[^8]International Series Control Transformers: 50-750 VA

Electromagnetic control components demand inrush currents up to 10 times the transformers nominal rating without sacrificing secondary voltage stability beyond practical limits. The International series transformers fully comply with IEC and NEMA standards and are available with IEC touchproof covers (IP20).

## Features

- Epoxy encapsulated for cooler operation
- Interleaved copper windings to reduce impedence
- $50 / 60 \mathrm{~Hz}$
- $55^{\circ} \mathrm{C}$ Rise, $105^{\circ} \mathrm{C}$ insulation system for harsh, heavy duty applications
- Exceeds IEC, NEMA, ANSI, NMTBA, JIC and automotive standards

Certifications and Compliances

- c(UL) us Listed: E77014 - Type SBE
- UL 5085-1, UL 5085-2
- CSA C22.2 No. 66.1, No. 66.2
- ( $\boldsymbol{\epsilon}$ - IEC/EN 61558-1, IEC/EN 61558-2-2
- RoHS Compliant

Note: Instantaneous VA calculated at At 50\% PF (Power Factor), 95\% Nominal Secondary Voltage.

## International Series - Fuse Recommendations

Primary Fusing: Consult local electrical code. Secondary Fusing: per IEC/EN61558-2-2.

| VA | Maximum Current Rating of Fuse |  |  |
| :---: | :---: | :---: | :---: |
|  | $\mathbf{2 4 ~ V a c ~}$ | $\mathbf{1 1 5}$ Vac | 230 Vac |
| 50 | 2 | 0.5 | 0.25 |
| 100 | 4 | 1 | 0.5 |
| 150 | 6 | 1.6 | 0.8 |
| 250 | 10 | 20 | 5 |
| 500 | 20 | 6.3 | 1.25 |
| 750 |  |  |  |

## ICE International Series: 750-2000 VA

International CE marked transformers include IP20 touchproof terminations and copper windings in an encapsulated design. These units range from 750 to 2000 VA with $80^{\circ} \mathrm{C}$ temperature rise. The design is highly flexible due to the use of the standardized primary coil for multiple worldwide voltage combinations. CE marked and cULus approval make the ICE International Series the perfect choice for OEM export equipment.

## Features

- IP20 Touch-Proof terminals
- Copper windings
- Epoxy encapsulated for cooler operation and increased reliability
- $80^{\circ} \mathrm{C}$ rise temp, $130^{\circ} \mathrm{C}$ insulation system for harsh, heavy-duty standards
- 50/60 Hz Frequency
- Meets or exceeds electrical requirements of NEMA, ANSI and IEC

## Certifications and Compliances

- c(U)us Listed: E77014 - Type SFP
- UL 5085-1, UL 5085-2
- CSA C22.2 No. 66.1, No. 66.2
- CE-IEC 61558-1, IEC 61558-2-2
- RoHS Compliant

Notes: At 50\% PF (Power Factor), 95\% Nominal Secondary Voltage.

International Series - Fuse Recommendations
Primary Fusing: Consult local electrical code. Secondary Fusing: per IEC/EN61558-2-2.

| VA | Maximum Current Rating of Fuse |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Maximum VA Rating for |  |  |  |
| 110/220Vac Output * |  |  |  |  |

* For 110 Vac and 220Vac output taps only, de-rate the output by $4 \%$ so the fuse is not loaded more than 1.1 times its rating per IEC 615558 .

## HSZ Series Industrial Control Transformers

The HSZ series is for applications where cost or heat issues make mounting the transformer outside the control panel necessary. This series has $80^{\circ} \mathrm{C}$ rise and have copper winding for industrial applications.

## Features

- UL Class $180^{\circ} \mathrm{C}$ insulation system, $80^{\circ} \mathrm{C}$ temperature rise under full load
- Meets or exceeds NEMA regulation standards
- Copper windings
- Encapsulated
- UL Listed/NEMA Type 3R (rain proof)

## Optional Styles

- UL Listed/NEMA Type 4 (wash down \& dust proof)

Design Style 1 - Type 3R

Design Style 2 - Type 4, Type 4X, Type 12

HSZ Series Selection Tables and Electrical Connections

## SolaHD Family of Transformers

SolaHD offers a broad range of transformers to meet many applications. These dry-type transformers are offered encapsulated, ventilated or non-ventilated, 600 Volt Class, isolation type, single and three phase, through 500 kVA. Indoor and outdoor models are available.

## Applications

Transformers are useful where the available voltage must be changed to accommodate the voltage required by the load. For many electrical circuits, the National Electrical Code (NEC) requires a separately derived neutral secondary connection provided by Delta-Wye connected transformers. Typical applications include:

- Hospitals
- Office Buildings
- Industrial Plants
- Commercial Buildings
- Apartment Buildings
- Institutional Buildings
- Schools
- Shopping Centers
- High Rise Buildings

General purpose transformers can be located close to the load. No vaults are required for installation and no long, expensive feeder lines are needed. Common applications include inductive and resistive loads such as motors, lighting and heating.

SolaHD general purpose transformers are manufactured to meet applicable industry standards, are Listed in accordance with UL 5058 and UL 1561 specifications and are classified as isolation transformers. The family of transformers includes:

## Distribution Transformers - Ventilated 15 kVA to 500 kVA

## General Purpose

These industry workhorses feature dry type construction and are classified as isolation transformers.

## Low Temperature Rise

Lower thermal stress on transformer insulation increases useful life.

## K-Factor

Designed to reduce the heating effects of harmonic currents created by solid state loads.

## Copper Wound

SolaHD general purpose transformers have standard aluminum coil windings. As an option, copper windings are available.

Automation Transformers - Non-Ventilated 50 VA to 45 kVA , Drive Isolation 7.5 kVA to 440 kVA and Industrial Control 50 VA to 10 kVA

## General Purpose

Dry-type transformers, 600 Volt Class, isolation type, single and three phase. Indoor and outdoor models available.

## Hazardous Location (Encapsulated)

Comply with Article 500 of the NEC for Class I, Division 2, Group A, B, C and D locations.

## Buck-Boost

Used for outdoor or designer low voltage lighting. When connected properly, these transformers can be used to raise or lower the supply voltage to match the needs of the load.

## Drive Isolation

Designed to handle the mechanical stresses, voltage demands and harmonics associated with SCR applications.

## Industrial Control

The units supply inrush current demands of electromagnetic loads and control applications.

## Selection Steps

A. Use the following steps below to manually select a transformer.
B. Find the electrical load requirements. These are:

1. Load operating voltage.
2. Load frequency (expressed in Hz ).
3. Determine load size - usually expressed in kVA, amperage or horsepower.
4. Is the load designed to operate on single phase or three phase power?

This information is available from the equipment manufacturer and is typically listed on the nameplate of the equipment.
C. Know the supply voltage conditions:

1. Available source voltage.
2. Available source frequency (a transformer will not change frequency. The frequency of the supply voltage and the needed load voltage must be equal).
3. Number of phases on power source.
D. Determine the transformer kVA rating:
4. If the load is expressed in kVA, select the appropriate transformer from the following selection charts (make sure the selected transformer's kVA rating is equal to or greater than the required load kVA).
5. If the load is expressed in amperage, use either the appropriate kVA formula listed below or the appropriate sizing chart on the next page.

$$
\begin{aligned}
& \text { kVA }(1 \varnothing)=\frac{\text { Volts } \times \text { Amps }}{1000} \\
& \mathrm{kVA}(3 \varnothing)=\frac{\text { Volts } \times \text { Amps } \times 1.732}{1000}
\end{aligned}
$$

3. If the load is expressed in wattage, either utilize the formula below to convert to kVA or refer to the equipment nameplate to obtain amperage requirement.

$$
\text { kVA }=\frac{\text { Wattage }}{(1000 \times \text { Power Factor of the load })}
$$

4. If the load is a motor and expressed in horsepower, refer to the motor horsepower charts on the next page.
Some sizes may require an optional weather shield (order separately) for outdoor use.

## Overcurrent Protection

Fusing and circuit breaker protection. How to overcurrent protect 600 Volt class transformers and associated wiring per NEC 450.3 (B), NEC 240.3 and NEC 240.6 (A).

1. Primary protection only is required if the transformer is single-phase and the secondary has only two wires. Overcurrent protection rating and location are shown in Diagram A.

| Primary Current | Overcurrent Protection Rating |
| :---: | :---: |
| Less than 2 amps | $300 \%$ maximum |
| 2 to 9 amps | 167\% maximum |
| 9 amps or more | 125\% of rated primary current (or <br> next highest standard rating) |

Diagram A
3. Primary and secondary protection is required if the transformer has more than two wires on the secondary circuit.

Diagram C
2. If the branch circuit feeding the transformer has overcurrent protection to meet the individual protection requirements in Example 1, then individual transformer protection is not required.

Diagram B
4. If the branch circuit feeding the transformer has overcurrent protection to meet the individual primary overcurrent protection requirements in Example 3, then individual primary protection is not required. Secondary OCP is required as shown below.

Diagram D

Fuse $=I$ times $300 \%$ next size smaller if primary current is less than 2 amp . No secondary fusing required.
(Fuse) $=(I * 500 \%)$ next size smaller if used for a motor control circuit per NEC 430.72 (C) (4).
$\square$ Fuse $=$ I times $167 \%$ next size smaller if primary current is less than 9 amp. No secondary fusing required.
(Fuse) $=(I$ times $250 \%$ ) next size smaller if primary current is less than 9 Amps. Secondary fusing is required see chart for size.
$\square$ Fuse $=$ I times $125 \%$ next size higher if primary current is 9 amp. or higher. No secondary fusing required.
(Fuse) $=$ (I times 250\%) next size smaller if primary current is 9 Amps. or higher. Secondary fusing is required see chart for size.

Recommended fuse sizes per UL 508 and NEC 450.3 (B), NEC 430.72 and commercially available type fuses.

## Primary Overcurrent Protection

A transformer has all the same component parts as a motor, and like a motor, exhibits an inrush when energized. This inrush current is dependent upon where in the sine wave the transformer was last turned off in relation to the point of the sinewave you are when you energize the transformer. Although transformer inrush could run up to 30 to 35 times full load current under no load, it typically is the same as a motor, about 6 to 8 times normal running current. For this reason it is important to use a dual element slow blow type fuse, the same type of fuse you would use with a motor. If using a circuit breaker, select a breaker with a time delay, again the same type you would use with a motor. If the time delay is not sufficient, you may experience "nuisance tripping" - a condition where the breaker trips when energizing the transformer but it functions properly after it is re-started.

## Secondary Overcurrent Protection

Overcurrent devices are used between the output terminals of the transformer and the load for three reasons:

1. Protect the transformer from load electrical anomalies.
2. Since short circuit current is minimized, a smaller gauge wire may be used between the transformer and the load.
3. Per NEC, a larger primary fuse may be used to reduce nuisance tripping.

## Capacity of Center Tap in Center Tap Delta Transformers

This is one of the most common transformer application questions. If the transformer is a SolaHD E5H series the tap is full capacity, but we must define what full capacity means on one phase of a three phase transformer. A three phase transformer built by SolaHD in a ventilated enclosure (standard construction on 15 kVA and above) has a per phase capacity equal to $1 / 3$ of the nameplate rating. Therefore, the tapped phase of a E5H30S has a total capacity of $10 \mathrm{kVA}(1 / 3$ of 30 kVA$)$. The 120 volt tap is at the center of this 240 volt winding so the capacity is 5 kVA on either side of the tap ( X 1 to X 6 and X 3 to X 6 ).

To determine the available capacity of the center tap, you must know the three phase load applied to the 240 delta. Each phase will supply $1 / 3$ of the kVA to the three phase load. If the E5H30 has a $21 \mathrm{kVA}, 3$ phase load connected to it, each phase is loaded at 7 kVA . Therefore, the tapped phase has 3 kVA available ( $10 \mathrm{kVA}-7 \mathrm{kVA}=3 \mathrm{kVA}$ ). The center tap can be loaded to 3 kVA without over loading the transformer, but the load must be split so that no more than 1.5 kVA ( $1 / 2$ the available capacity) is connected to either side of the $\operatorname{tap}(X 1$ to $X 6$ and $X 3$ to $X 6$ ).

The general formula is:

$\frac{\text { Transformer kVA - 3 Load kVA }}{6}=$| kVA of each |
| :---: |
| Center Tap Circuit |

Note: All 480 delta to 240 delta transformers stocked by SolaHD are equipped with a center tap.

## Secondary Fuse Recommendations

| Secondary Voltage |  |  |  |  |  |  |  |  |

Fuse $=I$ times 167\% next size smaller if secondary current is less than 9 amp .
Fuse $=I$ times 125\% next size smaller if secondary current is 9 amp . or higher.

Distribution Transformers manufactured after January 1, 2016 must meet specific energy efficiency requirements. U.S. Department of Energy defines the term "distribution transformers" as any transformer which:

- Has an input voltage of 34.5 kV or less
- Has an output voltage of 600 V or less
- Is rated for operation at a frequency of 60 Hz
- Has a capacity of 10 kVA to 2500 kVA for liquid-immersed units and 15 kVA to 2500 kVA for dry-type units

The following special purpose transformers are excluded from the definition of "distribution transformers" and are, therefore, not required to meet the energy efficiency standards at this time:

- Autotransformers
- Drive (isolation) transformers
- Grounding transformers
- Machine-tool (control) transformers
- Non-ventilated transformers
- Rectifier and Regulating transformers
- Sealed transformers
- Special-impedance transformers
- Testing transformers
- Transformer with tap range of $20 \%$ or more
- Uninterruptible power supply transformers
- Welding transformers

## Benefiting from Higher Energy Efficiencies

Increasing the energy efficiency of a transformer allows the unit to operate at the same level of power with less energy being wasted in the process. Decreasing usage through reduced waste by just $.03 \%$ over the next 20 years cuts the need for new power generation in the United States by 60 to 66 million kw.

SolaHD has been engineering and producing energy efficient transformers for over a decade. The SolaHD energy efficient transformers are optimized to meet DOE's CFR (Code of Federal Regulations) title 10, part 431 (also known as DOE 10 CFR p431 or referred to as DOE 2016) limits for load losses calculated to $35 \%$ of the name plate rating, yet are the same compact size and footprint as its' conventional $150^{\circ} \mathrm{C}$ rise units.

The example pictured in Figure 1 shows the differences in efficiency for the old standard model compared to the compliant model. At $35 \%$ load, the absolute difference in efficiency is only $1.7 \%$. However, that represents a $52 \%$ reduction in wasted energy. Taking that $52 \%$ reduction in

Figure 1
wasted energy and multiplying it across all the energy consumed results in substantial savings.

SolaHD offers the following family of transformers that meet the strict efficiency standards. The efficiencies of these transformers are optimized for the load losses calculated at $35 \%$ of the name plate rating. This $35 \%$ represents an industry average load of most LVGP transformers.

## Applications

Any situation where the available voltage must be changed to accommodate the voltage required by the specific electrical circuit or connected equipment. For many electrical circuits, the National Electrical Code (NEC) requires a separately derived neutral secondary connection provided by Delta-Wye connected transformers.

Distribution transformers can be located close to the load. No vaults are required for installation and no long, expensive feeder lines are needed. Common applications include inductive and resistive loads such as motors, lighting and heating.

## General Purpose Transformers

Transformers designed to meet the high energy efficiencies required by DOE 2016.

## Low Temperature Rise Transformers

Transformers designed to limit the temperature rise of the core and coil assembly to either $80^{\circ} \mathrm{C}$ or $115^{\circ} \mathrm{C}$ above a $40^{\circ} \mathrm{C}$ ambient. Reduction in temperature rise increases reliability.

## K-Factor Transformers

Transformers designed to withstand the electrical anomalies associated with solid state equipment and DC power supplies (excluding SCR variable speed motor drives) without derating the nameplate kVA.

## Copper Wound Transformers

SolaHD general purpose transformers have standard aluminum coil windings. As an option, we offer a selection with copper windings.

General Purpose
Energy efficient dry-type transformers 600 Volt Class, isolation type, single and three phase, 15 kVA through 500 kVA . Indoor and outdoor models available. For catalog numbers outside of the standard Selection Tables, fill out the Custom Transformer Quotation Request at the end of this section.

## Accessories and Optional Design Styles

- Electrostatic shield for quality power
- Wall mounting brackets (500 Ibs maximum) (Item WB1C)
- Weather Shields (UL Listed/NEMA Type 3R)
- Stainless Steel Enclosures
- Totally enclosed non-ventilated designs (TENV) (Non UL) *
- Open core and coil designs (UL Recognized)
- Copper Wound designs
- Low temperature designs

## Features

- Energy Efficient Compliant to DOE $2016{ }^{1}$
- UL Listed/NEMA Type 3R ventilated outdoor enclosures when used with optional weather shields (order separately)
- UL Class $220^{\circ} \mathrm{C}$ insulation system, $150^{\circ} \mathrm{C}$ temperature rise under full load
- Quiet operation with sound levels 3-6 dB below the NEMA ST-20 requirements

## Selection Tables: Single Phase

Group 1: 240 x 480 Volt Primary, $120 / 240$ Secondary, 60 Hz

- Terminal board connections and spacious wiring compartment
- Panel enclosure design reduces labor time. Wiring diagram on inside front cover.
- High efficiency for low cost operation
- Single and three phase availability
- Fast delivery
- Meets transit test requirements for ISTA (International Safe Transit Association) - Test Procedure 1E for packaged-product
- 10 year limited warranty

## Certifications and Compliances

- (UL) Listed: E25872
- UL 1561

## Low Temperature Rise

SolaHD low temperature rise transformers feature a $220^{\circ} \mathrm{C}$ insulation system and temperature rise of only $80^{\circ} \mathrm{C}$ or $115^{\circ} \mathrm{C}$ under full nameplate load. Reduction in temperature rise increases reliability.

The $35^{\circ} \mathrm{C}$ thermal reserve on $115^{\circ} \mathrm{C}$ rise units and $70^{\circ} \mathrm{C}$ reserve on $80^{\circ} \mathrm{C}$ rise units definitely mean higher reliability. The extra benefit is being able to operate either of these transformers as a $150^{\circ} \mathrm{C}$ rise unit and have a short term overload capacity of 15-30\% without compromising normal life expectancy (See Figure 2).

Low temperature rise transformers are designed for any critical application requiring extra overload capability and cooler operating temperatures. All are available with either a $115^{\circ} \mathrm{C}$ or $80^{\circ} \mathrm{C}$ thermal rise and a Class $220^{\circ} \mathrm{C}$ insulation system.

## Features

- Energy Efficient Compliant to DOE $2016{ }^{1}$
- Extra thermal reserve
- Meets transit test requirements for ISTA (International Safe Transit Association) - Test Procedure 1E for packaged-product
- Quiet operation with sound levels 3-6 dB below the NEMA ST-20 requirements
Accessories and Optional Design Styles
- Wall mounting brackets (500 lbs maximum) (Item WB1C)
- Weather Shields (UL Listed/NEMA Type 3R)
- Stainless Steel Enclosures
- Totally enclosed non-ventilated designs (TENV) (Non UL) *
- Open core and coil designs (UL Recognized)
- Copper Wound designs

## Selection Tables: Low Temperature Rise, Single Phase, $\mathbf{8 0}^{\circ} \mathbf{C}$ Rise

Notes:

1. DOE 2016 refers to Department of Energy CFR (Code of Federal Regulations) title 10, part 431.196).
2. Weather shields (set of two) must be ordered separately.
3. Design Styles and Electrical Connections can be found at the end of the Ventilated Distribution Transformers section.

* Not all optional designs are UL listed. Contact Technical Services.

## K-Factor Transformers

K-Factor transformers are designed to reduce the heating effects of harmonic currents created by loads like those shown in Chart A. The K-Factor rating is an index of the transformer's ability to withstand harmonic content while operating within the temperature limits of its insulating system. SolaHD K-Factor transformers have UL ratings of K-4, K-13, and K-20.

The SolaHD K-Factor design is a specialized transformer that offers these benefits:

- Conductors capable of carrying the harmonic currents of non-linear loads without exceeding the temperature rating of the insulation system.
- A transformer design that takes into account the increase in naturally occurring "stray" losses caused by non-linear loads. These losses cause standard transformers to dramatically overheat and substantially shorten design life.
- A core and coil design that manages the DC flux caused by triplen harmonics. As these harmonics increase, they cause additional current to circulate in the delta winding. This produces a DC flux in the core which leads to core saturation, voltage instability and overheating.

## Features

- Energy Efficient Compliant to DOE $2016{ }^{1}$
- Conductors to carry harmonics of a K-rated load without exceeding insulation temperature ratings
- UL 1561 Listed up to K-20 rated protection
- Rated temperature rise of $150^{\circ} \mathrm{C}, 220^{\circ} \mathrm{C}$ insulation
- Shielded for quality power
- Basic design takes "stray losses" into account and functions within safe operating temperatures
- Core and coil design engineered to manage the zero sequence flux caused by triplen harmonics
- Provides $100 \%$ rated current without overheating the windings or saturating the core
- Meets transit test requirements for ISTA (International Safe Transit Association) - Test Procedure 1E for packaged-product
- Quiet operation with sound levels 3-6 dB below the NEMA ST-20 requirements

## Accessories and Optional Design Styles

- Wall mounting brackets (500 lbs maximum) (Item WB1C)
- Weather Shields (UL Listed/NEMA Type 3R)
* Not all optional designs are UL Listed. Contact Technical Services.

1. DOE 2016 refers to Department of Energy CFR (Code of Federal Regulations) title 10, part 431.196).

## Automation Transformers - Non-Ventilated 50 VA to 45 kVA

SolaHD encapsulated transformers are rated for Hazardous Locations as well as harsh industrial environments. Encapsulation and rugged UL Listed/NEMA Type 3R enclosures protect the transformer from dust, moisture, and provide extra shock and vibration resistance. SolaHD transformers fully comply with the latest edition of the National Electrical Code for Class I, Division 2, Group A, B, $C$ and $D$ locations when installed in compliance with NEC 501.100 (B).

## Features

Single Phase: . 05 - . 250 kVA

- UL Listed/NEMA Type 3R non encapsulated enclosure for indoor and outdoor service
- Low temperature rise, UL Class $130^{\circ} \mathrm{C}$ insulation system, $80^{\circ} \mathrm{C}$ temperature rise under full load
- Conduit knockouts for side entry into wiring compartment
- Copper lead wire terminations

## Single Phase: 0.500-25 kVA <br> Three Phase: 3-45 kVA

- UL Listed/NEMA Type 3R encapsulated enclosure for indoor and outdoor service
- Electrostatically shielded for quality power on sizes 1 kVA and larger
- UL Class $200^{\circ} \mathrm{C}$ insulation system, $115^{\circ} \mathrm{C}$ temperature rise under full load
- Conduit knockouts for side entry into wiring compartment
- Copper lead wire terminations
- .500-45 kVA units are encapsulated with electrical grade silica and epoxy for industrial applications

## Related Products

- Some SolaHD DC power supplies are available with Class I, Division 2 ratings or encapsulation.
- Surge Protective Devices

## Certifications and Compliances

## All Models

- ©(UL) Us Listed: E25872, E77014
- UL 1561 or UL 5085-1, UL 5085-2
- CSA C22.2 No. 47 or No. 66
- RoHS Compliant

## Group 5, Export Models

- $\boldsymbol{E}_{\text {Low }}$ Voltage Directive
- IEC 61558-1, IEC 61558-2-4

## Accessories and Optional Design Styles

- Stainless Steel Enclosures
- Copper Wound designs
- UL Listed/NEMA Type 4, 4X or 12 Encapsulated Enclosures
- Low temperature designs available
- cULus Listed E361435 transformers for Class I, Division 2/Zone 2 hazardous locations are available as custom designs.

## Drive Isolation Transformers: 7.5-440 kVA, Three Phase

## Special Voltages and kVA Sizes for Drive Applications

For SCR (Silicon Control Rectifier) variable speed motor drive applications, a transformer is needed to magnetically isolate the incoming line from the motor drive. The transformer must also provide a voltage change to match the required voltage of the SCR Drive. Standard designs are delta primary and wye secondary to match the common power sources required in most three phase rectifier circuits.

SolaHD drive isolation transformers are specifically designed to handle the mechanical stresses, voltage demands and harmonics associated with SCR applications.

## Applications

- SCR Variable Speed Drives

## Features

- Available from 7.5 thru 440 kVA, 3 Phase, 60 Hz .
- Isolation minimizes load disturbances caused by the SCR drive.
- UL Listed/NEMA Type 3R enclosures when used with optional weather shield.
- Taps on all units for adjustments to incoming source voltage. Full capacity secondary neutral as required by the National Electric Code.
- Shielding attenuates line to ground noise.
- 10 year limited warranty

## Certifications and Compliances

## All Models

- (UL) Listed
- E25872 (UL 1561) or E77014 (UL 5085)
- RoHS Compliant

## Selection Table 1: Three Phase

- ¿(UL)us Listed (7.5kVA Models only)
- \$1. Certified (11 and 14kVA Models only)

## Dry Type Distribution Transformers

## CUSTOM TRANSFORMER QUOTATION REQUEST

Information is required prior to quotation being issued | Email this form to solahd.technicalservices@emerson.com or fax to (800) 538-6545.
SolaHD is pleased to offer the broadest range of transformers on the market including many custom designs. If you can't find what you are looking for, please fill out the information below and submit to our Technical Services Group at solahd.technicalservices@emerson.com. We are happy to provide a quote on a custom transformer if available.

## Specification Guide for Low Voltage, General Purpose, Dry Type Transformers ( 600 Volt Class) - . 05 kVA to 500 kVA

## General

Single and three phase distribution transformers (600 Volt and below). 60 HZ , ventilated transformers above 15kVA need to meet DOE 2016 requirements.

- Provide and install, as referenced on the electrical plans, enclosed dry type transformers as manufactured by SolaHD.

## Standards

- Transformers must be listed by Underwriters Laboratories, evaluated to CSA standards and designed, constructed and rated in accordance with NEMA ST 20 and applicable IEEE \& OSHA specifications.

## Construction

## Cores

- All transformer cores shall be constructed of low loss, high quality, electrical grade laminate steel. By design, the flux density is to be kept well below the saturation level to reduce audible sound level and minimize core losses. The core volume shall allow operation at 10\% above rated primary voltage at no load without exceeding the temperature rise of the unit.

## Coils

- Coil conductors shall be either aluminum or copper and must be continuous. The entire core and coil assembly shall be impregnated with a thermal setting varnish and cured to reduce hot spots in the coils and seal out moisture. Coils with exposed magnet wire will not be acceptable. Transformers shall have common core construction.
- All transformers 1 kVA or larger shall incorporate a faraday (electrostatic) shield between primary and secondary windings for the attenuation of voltage spikes, line noise and voltage transients.
- General purpose transformers are classified as isolation transformers.

## Electrostatic Shield

- For power conditioning purposes, it is recommended that isolation transformers be equipped with electrostatic shielding between the primary and secondary windings. An electrostatic shield provides a conducting path to ground that reduces the effect of coupling between primary and secondary windings and improves the isolation transformer's ability to isolate its' load from the common-mode noise present on the input power source. Electrostatic shields significantly reduce or eliminate electrical disturbances on the line from being transmitted to the sensitive load.

## Enclosures

- Transformer enclosures shall be constructed of heavy gauge sheet steel and coated with a grey powder paint finish (ANSI 61). Enclosures shall be UL Listed/NEMA Type 1 and 3R rated for outdoor use. This information must be listed on the transformer nameplate.
- Maximum transformer enclosure temperature will not exceed $65^{\circ} \mathrm{C}$ rise above a $40^{\circ} \mathrm{C}$ ambient under full load.
- The transformer enclosure must be grounded by the installer in accordance with the latest edition of the National Electric Code and any local codes or ordinances.

## Performance

- Audible sound levels will not exceed limits established in NEMA ST20:

| Less than 10 kVA | 40 db |
| :--- | :--- |
| 10 to 50 kVA | 45 db |
| 51 to 150 kVA | 50 db |
| 151 to 300 kVA | 55 db |
| 301 to 500 kVA | 60 db |

- Transformers shall incorporate a UL Recognized insulation system.

## Limited Warranty

- Transformers are warranted against material, performance and workmanship defects for a period of ten (10) years from date of manufacture with the provision for an additional two (2) years. Custom transformers come with a 1-year warranty.

## Approval

- Typical performance and dimensional data on similar units must be submitted on all transformers for approval. Factory testing must have been conducted in accordance with NEMA ST20. Submitted performance and dimensional data must include, but is not limited to the following:
A. Height, width, depth, mounting dimensions, conduit entry locations and lifting provisions
B. Weight
C. Transformer losses
D. Potential tests both applied and induced
E. Temperature - ambient and rise under full load
F. Insulation class
G. \% excitation current
H. Electrical schematic including taps
I. Polarity and phase rotation
J. kVA, frequency and voltage rating
K. IR, IX, and IZ percentages at reference temperature
L. Audible sound level

Design Styles. ..... 251
Selection Tables: Single Phase ..... 252
Selection Tables: Three Phase ..... 258
Connection Diagrams for Buck-Boost Applications ..... 264
Application Note ..... 268

Buck-Boost transformers are small, single phase, dry type distribution transformers designed and shipped as insulating/isolating transformers. They have a dual voltage primary and a dual voltage secondary. These transformers can be connected for a wide range of voltage combinations. The most common use is to buck (lower) or boost (raise) the supply voltage a small amount, usually 5 to $27 \%$. Buck-boost transformers are in compliance with NEC Article 210.9, Exception 1 when field connected as an autotransformer.

The major advantages of Buck-boost transformers are their low cost, compact size and light weight. They are also more efficient and cost less than equivalent isolation transformers. When connected as an autotransformer, they can handle loads up to 20 times the nameplate rating. A buck-boost transformer is the ideal solution for changing line voltage by small amounts.

When a buck-boost has the primary and secondary windings connected, per recommended instructions, it becomes an autotransformer. Now, only the secondary windings are transforming voltage and current. The majority of the kVA load passes directly from the supply to the load. This is the reason buck-boost transformers can supply a load with a much larger kVA rating than the nameplate indicates.

## Low voltage lighting control applications

SolaHD buck-boost transformers are designed to supply power to low voltage lighting circuits, control panels or other systems requiring $12,16,24,32$, or 48 Volts. When connected as an insulating transformer (by following the wiring diagram located after the specification tables on the inside of the transformer case), the transformer's capacity matches the nameplate kVA rating.

SolaHD buck-boost transformers are also suited for low voltage landscape lighting. They are UL Listed for outdoor service and their compact size makes them the perfect solution for providing power to accent lighting applications. Electrical Connection diagrams are shown at the end of this section.

Use dimmers on the output of the transformer that are designed and rated for use with magnetic loads. We strongly recommend contacting the dimmer manufacturer for advice on your specific lighting application.

## Certifications and Compliances

- (UL) us Listed
- UL 506
- CSA C22.2 No. 66

## Accessories

- Surge Protective Devices
- Active Tracking ${ }^{\circledR}$ Filters

## Selection Steps

## 1. Input Line Voltage

Measure the supply voltage with a voltmeter.

## 2. Voltage Required for the Load

Check the load equipment to determine the voltage requirement.

## 3. kVA or Ampere Rating of the Load

Find either the load kVA or the load amperage requirements. This information is listed on the nameplate of the load equipment.

## 4. Frequency

Either 50 or 60 Hz . The frequency of the transformer must match the frequency of the load.

## 5. Number of Phases

Single or three phase line and load must match. (A transformer cannot convert single to three phase.) A common application is to make a single phase connection from a three phase supply by using one phase of the three phase supply circuit. Be careful not to overload that phase of the three phase supply. For buck-boost applications the supply must provide load kVA - not just the nameplate rating of the buck-boost. Refer to the Selection Tables on the following pages.

Three phase, buck-boost applications require two or three transformers. Check the "Quantity Required" column of the Three Phase Selection Tables for the exact quantity.

## Fusing Buck-Boost Transformers

For determining the correct size of breaker or fuse for a given range of input or output ampere ratings, refer to Section 450.4, of the National Electric Code (NEC).

Where an overcurrent protection device is required, the electrical connections and selection tables will reference appropriately.

Overcurrent devices OC-1a and OC-1b are shown correctly installed in accordance with NEC 450.4. Locating an overcurrent device in series with the shunt winding anywhere between $A$ and $B$ is not permitted. The shunt winding is the winding common to both the input and the output circuits.

## Using the Selection Tables

1. Determine if you are trying to Boost (raise) or Buck (lower) your voltage. Select an input/output voltage combination that comes closest to matching your application from the appropriate single or three phase charts on the following pages.
2. Move across your selected input/output voltage row to the amperage or kVA rating closest to, but greater than the rating required by your load.
3. Reading the top of the column will give you the catalog number of the exact buck-boost transformer you need. See the Specification Tables on the next page.
4. Connect the transformers according to the diagram indicated. See the Electrical Connections section at the end of this section. Connection diagrams are packed with each transformer.

## Specification Tables

Alternate Electrical Connections for Buck-Boost Applications

Diagram A1-Boosting

Diagram A2-Bucking

Diagram B1 - Boosting

Diagram B2 - Bucking

Diagram C1 - Boosting

Diagram C2 - Bucking

The o symbol shown on these connection diagrams indicates where fuses or breakers should be field installed for line to neutral applications. For line to line applications, fuses or breakers should be installed on both lines.

Application Note: On all auto-wye connections, the source neutral must be present and connected to the transformer bank. If source neutral is not present, do not use an auto-wye connection.

## Application Note

## Application Limitations with Buck-Boost Transformers

1. A Buck-Boost transformer cannot be used to develop a three phase, four wire wye circuit from a three phase, three wire delta circuit.

A delta to wye connection does not supply enough current carrying capability to provide for unbalanced currents flowing in the neutral wire of the four wire circuit. The neutral created is not stable and under load will not deliver desired line to neutral voltages. This connection would also be in violation of the National Electric Code, Article 210.9.
2. Buck-Boost transformers cannot be used in a closed delta connection.

A closed delta requires more kVA capacity than a wye or an open delta connection, plus phase shifting comes into play on the output side.
3. Buck-Boost transformers should not be used to correct for voltage drop on a long circuit run where the load fluctuates.

Voltage drop varies with the load and buck-boost transformers are connected for a specific voltage change. If a buck-boost transformer was used to correct voltage drop during peak loading conditions, high voltages may result under light load conditions. This could be equally detrimental to the load and possibly pose safety hazards.
4. Buck-Boost transformers cannot be used to create a 240/120 Volt, single phase service from a 208Y/120 Volt three phase supply.

Two problems that would occur:
A. Two neutrals would exist on the same circuit. Since neutrals must be grounded according to the National Electric Code, a short circuit would be created.
B.Unbalanced line to output neutral voltages would be created; one line would read 120 Volts, the other 130+ Volts.

What is a Buck-Boost transformer and why is it used?
Isolation transformers have separate primary and secondary windings, electrically insulated and isolated from one another. With a relatively high voltage primary (typically 120, 240 or 480 Volts) and a relatively low voltage secondary (typically $12,16,24,32$ or 48 Volts), buck-boost transformers are designed to be field connected as autotransformers. These are transformers with one continuous winding, a portion of which is jointly shared between the input and the output. No electrical isolation is present in an autotransformer.

Buck-Boost transformers have two major uses:

1. When field connected as an autotransformer, they can be used to Buck (lower) or Boost (raise) available line voltage in the range of 5 to $27 \%$ and at a kVA rating many times that listed on the transformer nameplate.
2. When left as an isolation transformer, they can be used to supply power to low voltage circuits at the nameplate rating listed.

The importance of altering available line voltage.
Electrical equipment is designed to operate at maximum efficiency at a specific standard supply voltage. Your voltage may not be at the standard supply voltage level. Causes can be proximity to a large utility transformer, losses in the line voltage due to loads on that circuit, or a difference between the standard supply voltage available and the standard supply voltage needed to run the equipment.

Normally the problem is having low voltage available. Low voltage on a circuit, even as little as 5\% lower can cause a decrease in incandescent light output, and a decrease in resistive heat output. With motors low voltage can cause a decrease in motor torque, an increase in motor amperage requirements, an increase in motor temperature and decrease in motor life expectancy.

# Innovative solutions to optimize operational performance, improve efficiencies, preserve data and increase equipment longevity. 

SolaHD is the cornerstone brands of Emerson's Electrical Apparatus and Lighting business; trusted worldwide to power your process control applications in the most demanding applications worldwide.
