Rosemount™ 2130 Level Switch
Vibrating Fork

- Designed for operation in process temperatures of –94 to 500 °F (–70 to 260 °C)
- Electronic self-checking and condition monitoring – ‘Heartbeat’ LED gives status and instrument health information
- Increased safety, SIL2-certified to IEC 61508 as required by IEC 61511
- Adjustable switching delay for turbulent or splashing applications
- “Fast drip” fork design giving quicker response time especially with viscous liquids
- General area, explosion-proof/flameproof, and intrinsically safe options
Overview of the Rosemount 2130

Measurement principle

The Rosemount 2130 is designed using the principle of a tuning fork. A piezo-electric crystal oscillates the forks at their natural frequency. Changes to this frequency are continuously monitored. The frequency of the vibrating fork sensor changes depending on the medium in which it is immersed. The denser the liquid, the lower the frequency.

When used as a low level alarm, the liquid in the tank or pipe drains down past the fork, causing a change of natural frequency that is detected by the electronics and switches the output state.

When the Rosemount 2130 is used as a high-level alarm, the liquid rises in the tank or pipe, making contact with the fork which then causes the output state to switch.

Key features and benefits:

- It is virtually unaffected by turbulence, foam, vibration, solids content, coating products, and liquid properties.
- The mid-range temperature Rosemount 2130 is designed for operation in process temperatures from –40 to 356 °F (–40 to 180 °C).
- The high-temperature Rosemount 2130 is designed for operation in process temperatures from –94 to 500 °F (–70 to 260 °C). It has a stainless steel thermal tube to move the electronics away from the process.
- Electronic self-checking and condition monitoring. The ‘heartbeat’ LED gives status and health information on the Rosemount 2130.
- The adjustable switching delay prevents false switching in turbulent or splashing applications.
- The ‘fast drip’ fork design gives quicker response time when mounted horizontally, especially with viscous liquids.
- It offers rapid wet-to-dry time for highly responsive switching.
- The fork shape is optimized for hand polishing to meet hygienic requirements.
- No moving parts or crevices for virtually no maintenance.

Superior diagnostics

- Built-in diagnostics continuously check electronic and mechanical health
- Fork conditions detected including internal and external damage, coated or blocked, and extreme corrosion
- Ideal for critical alarm duties

Fit and forget

- Once installed, the Rosemount 2130 is ready to go. It needs no calibration and requires minimum installation.
- The ‘heartbeat’ LED gives an instant visual indication that the unit is operational.
- Functional testing of the instrument and system is easy with a magnetic test point.
- You can install, and forget it.

Extended high- and low-temperature performance

The high-temperature Rosemount 2130 enables standardization of Rosemount vibrating fork switches across a wide range of process environments, and is ideally suited for harsh conditions where high reliability is essential.

Applications

- Overfill protection
- High- and low-level alarms
- Pump control or limit detection
- Run dry or pump protection
- Hygienic applications
- High-temperature applications
- Wireless applications

In tank gauging systems, a Rosemount 2130 high-level alarm switch can be used as an alternative to a second radar level gauge. See the Rosemount Tank Gauging Product Data Sheet.
## Ordering information

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 9 for more information on material selection.

**Example of options included with the model number:**

2130 L A 2 E S 9 NN B A 0000 1 NA Q8

---

1. Flanges are dual certified 316 and 316L Stainless Steel (1.4401 and 1.4404).
2. Only available for wetted parts.
3. Option is not available for hand polished wet side as standard.
4. Only available for a flanged Rosemount 2130; the Operating Temperature code M must be selected (mid-range) and the process temperature must be below 302 °F (150 °C).
5. Only available for BSPT and NPT threaded process connection codes 9-NN-B, 9-NN-N, 1-NN-B, and 1-NN-N as standard, other upon request.
6. Other process connections available upon request.
7. Example Fork Length code E1181 is 118.1 inches. Code M4000 is 4000 millimeters. See “Extended lengths” on page 9 for minimum and maximum extended lengths.
8. Not available with Material of Construction Process / Fork option code H.
9. Hand-polished for hygienic connections to better than 0.4 μm Ra such that there are no pits, folds, crevices or cracks discernible to the naked eye (i.e. no features larger than 75 micrometers based on resolving 1/60 degree at a distance of 250 mm).
10. Includes the Technical Regulation Customs Union (EAC) ordinary location mark.
11. See “Product certifications” on page 12. E5 includes G5 requirements. G5 is for use in unclassified, safe area locations only.
12. See “Product certifications” on page 12. E6 includes G6 requirements. G6 is for use in unclassified, safe area locations only.
13. The requirements of CRN are met when a Rosemount 2130 CSA approved vibrating fork level switch (with Product Certifications code G6, E6, or I6) is configured with stainless steel wetted parts and either NPT threaded or ASME B16.5 2-in. to 4-in. flanged process connections.
15. Option limited to units with extended lengths up to 59.1-in. (1500 mm). Option is not available for ECTFE coating.
Safety Integrity Level (SIL) certification option

- The Rosemount 2130 is SIL2-certified.

The Rosemount 2130 has been independently certified to IEC 61508 as required by IEC 61511. Certification was conducted by Exida. If required, add “QT” to the end of the model number. For example, 2130 L A 2 E S 9 NN B A 0000 1 NA Q8 QT
(Note that you can have one or more OPTIONS codes at the end of the model number.)

- Visit the Rosemount 2130 web page for additional information.

Overfill approval option

- The Rosemount 2130 has been TÜV-tested and approved for overfill protection according to the German DIBt/WHG regulations. This option is not selectable in the ordering information table. If required, add “R2259” to the end of the model number. For example, 2130 L A 2 E S 9 NN B A 0000 1 NA Q8 R2259
(Note that you can have one or more OPTIONS codes added at the end of the model number.)
## Spare parts and accessories

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 9 for more information on material selection.

</tbody>
</table>

1. Intrinsically Safe (IS) approved cassettes can only be replaced with the same type of IS cassette. Non-IS cassette types can be interchanged with other non-IS cassettes, but the new label must be fitted and the original part number transferred to the new label.
2. When ordering a replacement cassette, check the Product Certification section in Table 1 on page Wireless-4 for availability conditions.
3. Available for units with Direct Load electronics (Output code L). Not available for units with Options code LD is included in the model number.
4. Available for units with PNP/PLC electronics (Output code P). Not available for units with Options code LD is included in the model number.
5. Available for units with NAMUR electronics (Output code N). Not available for units with Options code LD is included in the model number.
6. Available for units with DCPO Relay electronics (Output code D). Not available for units with Options code LD is included in the model number.
7. Available for units with Direct Load electronics (Output code L) and Options code LD included in the model number.
8. Available for units with PNP/PLC electronics (Output code P) and Options code LD included in the model number.
9. Available for units with NAMUR electronics (Output code N) and Options code LD included in the model number.
10. Available for units with DCPO Relay electronics (Output code D) and Options code LD included in the model number.
11. Available for units with 8/16 mA electronics (Output code M). Not available for units with Options code LD is included in the model number.
12. Available for units with 8/16 mA electronics (Output code M) and Options code LD included in the model number.
13. Available for units with Fault and Alarm Relay electronics (Option code F) only. Not available for units with Options code LD is included in the model number.
14. Available for units with Fault and Alarm Relay electronics (Option code F) and Options code LD included in the model number.
15. The Quick Release kit is a set of accessories requiring a Rosemount 2130 with the 2-in. Tri Clamp option and an existing 2-in. NPT process connection on the vessel. For additional information, see Rosemount 2120 Quick Release kit – Quick Start Guide.

The maximum extended length is 157.5 in. (4000 mm) except for the ECTFE co-polymer coating and polished process connection options which have a maximum length of 59.1 in. (1500 mm) and 39.4 in. (1000 mm) respectively.

Material selection
Emerson™ provides a variety of Rosemount product with various product options and configurations including materials of construction that can be expected to perform well in a wide range of applications. The Rosemount product information presented is intended as a guide for the purchaser to make an appropriate selection for the application. It is the purchaser’s sole responsibility to make a careful analysis of all process parameters (such as all chemical components, temperature, pressure, flow rate, abrasives, contaminants, etc.), when specifying product, materials, options and components for the particular application.

Emerson is not in a position to evaluate or guarantee the compatibility of the process fluid or other process parameters with the product, options, configuration or materials of construction selected.

Process connection materials

- 316/316L Stainless Steel (1.4401/1.4404 dual certified)
- Alloy C (UNS N10002) and Alloy C-276 (UNS N10276) – available for flanged, and BSPT and NPT threaded process connections (3/4-in. and 1-in. BSPT (R), and 1/2-in. and 1-in. NPT)
- ECTFE co-polymer coated 316/316L Stainless Steel (1.4401/1.4404 dual certified) – only available for a flanged 2130

Hand-polished to better than 0.4 μm option for hygienic connections

Gasket material for 3/4-in. and 1-in. BSPP (G) is non-asbestos BS7531

Grade X carbon fiber with rubber binder

Functional

Maximum operating altitude
6562 ft. (2000 m)

Maximum operating pressure
The final rating depends on the type of process connection.
- Threaded connection: see Figure 3 for operating pressures.
- Tri Clamp connection: 435 psig (30 bar g)
- Flanged Connection: see Figure 3 or Table 1 (whichever gives the lowest pressure).
Figure 1. Process Pressure

</tbody>
</table>

1. At 100 °F (38 °C), the pressure rating decreases with an increasing process temperature.
2. At 122 °F (50 °C), the pressure rating decreases with an increasing process temperature.

Performance

Hysteresis (water)
- 0.1 in. (2.5 mm)

Switching point (water)
- 0.5 in. (13 mm) from tip of fork (if vertical installation) or from edge of fork (if horizontal installation) – this will vary with different liquid densities

Liquid density requirement
- Minimum standard density is 37.5 lb/ft³ (600 kg/m³).
- Minimum density is 31.2 lb/ft³ (500 kg/m³) when ordered with the Low Density Range option.

Liquid viscosity range
- Up to 10000 cP (centiPoise) when operating in the Normal mode.
- Up to 1000 cP (centiPoise) when operating in Self-check mode.

Solids content and coating
- The maximum recommended diameter of solid particles in the liquid is 0.2 in. (5 mm) when used in normal mode only.
- For coating products, avoid bridging of forks.

Minimum and maximum operating temperatures

- See Figure 2 for operating temperatures.

The ambient temperature for a 8/16 mA cassette is limited to 158 °F (70 °C) in dust applications.
Switching delay
There is a user-selectable 0.3-, 1-, 3-, 10-, 30-second delay for dry-to-wet and wet-to-dry switching.

CIP (Clean In Place) and SIP (Steam In Place) cleaning
Withstands cleaning routines up to 275 °F (135 °C).

NACE
NACE compliance to MR0175 / ISO 15156 or MR0103, depending on the option code selected for the model number.

Electrical

Switching mode
- User-selectable switching mode (Dry = on or Wet = on)

Protection
- Polarity insensitive
  - On Direct Load and Relay electronics
- Over-current protection
  - On Direct Load and PNP/PLC electronics
- Short-circuit protection
  - On Direct Load and PNP/PLC electronics
- Load-missing protection
  - On Direct Load and PNP/PLC electronics

Surge protection (to IEC61326)
- Available on all versions of the Rosemount 2130

Magnetic test point
A magnetic test point is located on the side of the housing, allowing a functional test of the Rosemount 2130 and a system connected to it. By holding a magnet to the target, the output changes state for as long as the magnet is held there.

Terminal connection (wire diameter)
Minimum 26 AWG and maximum 14 AWG (0.13 to 2.5 mm²). Note national regulations.

Conduit plugs/cable gland
Conduit entries for explosion-proof areas are shipped with one Exd plug (loose in bag) and two dust caps fitted. Use suitably rated cable glands. Unused conduit entries must be sealed with a suitably rated blanking plug. Local codes and regulations must be complied with.

Grounding
The Rosemount 2130 should always be grounded, either through the terminals or using the external ground connection provided.
Product certifications

European directive information
The EC declaration of conformity for all applicable European directives for this product can be found at Emerson.com/Rosemount.

NAMUR approval
NAMUR NE95 type test report is available upon request. Complies with NAMUR NE21.

Overfill approval
Certificate number: Z-65.11-519.
TÜV-tested and approved for overfill protection according to the German DIBt/WHG regulations.
Certified under safety devices for tanks and piping related to water pollution control.

Marine approvals
ABS  American Bureau of Shipping
GL   Germanischer Lloyd (excludes Alarm and Fault relays)
SRS  Russian Maritime Registered Shipping (RMRS)

Drinking water approval
Rosemount Measurement Ltd., Slough, UK confirms that the wetted parts of the Rosemount type 2130 vibrating level switches are suitable and approved for use in potable water.
The wetted parts of the vibrating level switches executed in: Stainless steel (option code S) and Alloy C / Alloy C-276 (option code H) with Flanged (option code R), NPT thread (option code N), BSPT(R) thread (option code B) or Tri Clamp (option code C) process connections, are in accordance with the requirements of DVGW* - Worksheet W270. The materials used are classified as toxicologically and microbiologically safe.

Ordinary location certification for CSA
G6  Certificate number: 06 CSA 1805769
The switch has been examined and tested to determine that the design meets basic electrical, mechanical, and fire protection requirements by CSA, a nationally recognized testing laboratory as accredited by the Standards Council of Canada (SCC). Single process seal.

Safety Integrity Level (SIL) certification
The Rosemount 2130 is SIL2-certified, it has been independently certified to IEC 61508 as required by IEC 61511. Certification was conducted by Exida.
If required, add “QT” to the end of the model code.
For example, 2130 L 2 E 5 9 NN B A 0000 1 NA Q8 QT.

Marine approvals

Canadian Registration Number
CRN 0F04227.2C
