Emerson™ Wireless THUM™ Adapter

- 2-, 3-, or 4-wire HART® devices
- Flexibility to meet your most demanding applications
- Wireless output with >99 percent data reliability delivers rich HART data, protected by industry leading security
- Gain access to additional HART information, such as diagnostics or multi-variable data
- Add wireless to almost any measurement point
- Wireless brings measurement capabilities to previously inaccessible locations
IEC 62591 (WirelessHART®)... the Industry Standard

Self-organizing, adaptive mesh routing

- No wireless expertise required. Devices automatically find the best communication paths.
- Network continuously monitors paths for degradation and repairs itself.
- Adaptive behavior provides reliable, hands-off operation and simplifies network deployments, expansion, and reconfiguration.
- Supports both star and mesh topologies.

Industry standard radio with channel hopping

- Standard IEEE 802.15.4 radios
- 2.4 GHz ISM band sliced into 16 radio channels
- Continually “hop” across channels to avoid interference and increase reliability
- Direct sequence spread spectrum (DSSS) technology delivers high reliability in challenging radio environment

Self-healing network

- The self-organizing, self-healing network manages multiple communication paths for any given device. If an obstruction is introduced into the network, data will continue to flow because the device already has other established paths. The network will then lay in more communication paths as needed for that device.

Seamless integration to existing hosts

- Transparent and seamless integration
- Same control system applications
- Gateways connect using industry protocols

Wireless THUM Adapter

Enable enhanced valve capabilities
- Online, in-service valve testing through AMS ValveLink SNAP-ON™ Application.
- Monitor alerts such as travel deviation with AMS Device Manager, supply pressure, and electronics health.
- Trend actual valve position.

Gain access to advanced instrument diagnostics
- Rosemount™ 3051S with Advanced Process Diagnostics
- Micro Motion™ Coriolis Meter Verification with optional AMS Meter Verification SNAP-ON
- Rosemount Radar Echo Curve
- Rosemount Magnetic Flow Meter Verification with AMS Device Manager

Efficiently gather data from multivariable devices
- Rosemount 3051S MultiVariable™ Transmitter and Rosemount 3095 Mass Flow Transmitters
- Rosemount 3300 and 5300 Radar Level Transmitters
- Micro Motion Coriolis Meters
- Rosemount TankRadar™ Rex and TankRadar Pro
- Rosemount Magnetic Flow Meter
- Rosemount MultiVariable Vortex Flow Meter

Make any HART device wireless access new measurement information
- Level
- Flow
- Valves
- Liquid and Gas Analytical
- Pressure
- Temperature

Remotely manage devices and monitor health with AMS Device Manager
- Reduce troubleshooting time
- As found, as left data
- Calibration tracking

Device specifications
- Approvals: FM, CSA, ATEX, IECEx
- Input: Either 2-, 3-, or 4-wire HART 5.0 device
- SmartPower™: Power scavenging technology (no battery required)
- Minimum load on loop 250 Ohms
Ordering Information

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 6 for more information on material selection.

Specifications

Functional specifications

Input
Any 2-, 3-, or 4-wire HART powered device

Output
IEC 62591 (WirelessHART)

Humidity limits
0–100 percent relative humidity

Update rate
User selectable, eight seconds to 60 minutes.

Physical specifications

Material selection
Emerson provides a variety of Rosemount product with various product options and configurations including materials of construction that can be expected to perform well in a wide range of applications. The Rosemount product information presented is intended as a guide for the purchaser to make an appropriate selection for the application. It is the purchaser’s sole responsibility to make a careful analysis of all process parameters (such as all chemical components, temperature, pressure, flow rate, abrasives, contaminants, etc.), when specifying product, materials, options and components for the particular application. Emerson is not in a position to evaluate or guarantee the compatibility of the process fluid or other process parameters with the product, options, configuration or materials of construction selected.

Electrical connections
The THUM Adapter is connected into a powered 4–20 mA loop, powering itself by scavenging power. The THUM Adapter causes a voltage drop across the loop. The drop is linear from 2.25 V at 3.5 mA to 1.2 V at 25 mA, but does not effect the 4–20 mA signal on the loop. Under fault conditions, the maximum voltage drop is 2.5 V.

Power supply
Minimum load on loop 250 Ohms
To maintain normal operating functions of the sub-device, the power in the loop must have at least a 2.5 V margin at a 250 Ω load.
Limit power supply to 0.5 A maximum.
Limit power supply to 55 Vdc maximum.

Field Communicator connections
Utilize wired device HART connections

Materials of construction

Enclosure
Housing option D - Low-copper aluminum
Housing option E - 316 SST
Paint - Polyurethane
M20 conduit adapter - SST
M20 conduit adapter O-ring - Buna-N

Antenna
Polybutadine terephthalate (PBT)/Polycarbonate (PC) integrated omni directional antenna

Weight
THUM Adapter only AL - 0.65 lb (0.29 kg)
THUM Adapter only SST - 1.1 lb (0.5 kg)
AL THUM Adapter with AL remote kit - 3.2 lb (1.45 kg)
SST THUM Adapter with SST remote kit - 5.8 lb (2.65 kg)
AL THUM Adapter with M20 conduit adapter - 0.85 lb (.038 kg)
SST THUM Adapter with M20 conduit adapter - 1.3 lb (0.59 kg)

Enclosure ratings
Housing option code D and remote mount kits are enclosure Type 4X and IP66.

Mounting
The THUM Adapter may be attached directly to the conduit of any 2- or 4-wire HART device or mounted remotely by using remote mount kit.
Performance specifications

ElectroMagnetic Compatibility (EMC)

Meets all industrial environments of EN61326 and NAMUR NE-21 when installed with shielded wiring. The sub-device must also use shielded wiring for installation. Maximum deviation ≤1% span during EMC disturbance(1).

Vibration effect

Output unaffected when tested per the requirements of IEC60770-1 field with general application or pipeline with low vibration level (10–60 Hz 0.15 mm displacement peak amplitude/60–500 Hz 2 g).

When the THUM Adapter is used on wired devices that are subject to vibration levels greater than 2 g, it is recommended that the THUM Adapter be remotely mounted using the remote mount kit.

Temperature limits

<table>
<thead>
<tr>
<th>Operating limit</th>
<th>Storage limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>–40 to 185 °F</td>
<td>–40 to 185 °F</td>
</tr>
<tr>
<td>–40 to 85 °C</td>
<td>–40 to 85 °C</td>
</tr>
</tbody>
</table>

1. During the surge event, device may exceed maximum EMC deviation limit or reset; however, device will self-recover and return to normal operation within specified start-up time.
Product Certifications

Rev 2.5

European Directive Information

A copy of the EC Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EC Declaration of Conformity can be found at Emerson.com/Rosemount.

Ordinary Location Certification from FM Approvals

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by FM Approvals, a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

Telecommunication compliance (for wireless products only)

All wireless devices require certification to ensure that they adhere to regulations regarding the use of the RF spectrum. Nearly every country requires this type of product certification.

Emerson is working with governmental agencies around the world to supply fully compliant products and remove the risk of violating country directives or laws governing wireless device usage.

FCC and IC (for wireless products only)

This device complies with Part 15 of the FCC Rules. Operation is subject to the following conditions: This device may not cause harmful interference. This device must accept any interference received, including interference that may cause undesired operation. This device must be installed to ensure a minimum antenna separation distance of 20 cm from all persons.

Installing Equipment in North America

The US National Electrical Code® (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area classification, gas, and temperature class. This information is clearly defined in the respective codes.
