Rosemount™ 751 Field Signal Indicator
About this guide

This guide provides basic guidelines for Rosemount 751 Field Signal Indicator. It does not provide instructions for configuration, diagnostics, maintenance, service, troubleshooting, Explosionproof, Flameproof, or intrinsically safe (I.S.) installations. Refer to the Rosemount 751 Reference Manual for more instruction. This manual is also available electronically on Emerson.com/Rosemount.

⚠️ WARNING ⚠️

Explosions could result in death or serious injury.

- Installation of this indicator in an explosive environment must be in accordance with the appropriate local, national, and international standards, codes, and practices. Review the Product Certifications section for any restrictions associated with a safe installation.

- In an explosion-proof/flameproof installation, do not remove the indicator cover when power is applied to the unit.

Electrical shock could cause death or serious injury.

- Avoid contact with the leads and terminals. High voltage that may be present on leads can cause electrical shock.

Physical access

- Unauthorized personnel may potentially cause significant damage to and/or misconfiguration of end users’ equipment. This could be intentional or unintentional and needs to be protected against.

- Physical security is an important part of any security program and fundamental to protecting your system. Restrict physical access by unauthorized personnel to protect end users’ assets. This is true for all systems used within the facility.

1.1 Assembly

The Rosemount 751 Field Signal Indicator is comprised of the components shown in Figure 1-1. The housing may contain an analog or liquid crystal display (LCD) display meter. Both meters are independent of component parts and are completely interchangeable. Both meters plug into the terminal screws on the housing, as shown in Figure 1-1.

The meter sub-assembly contains the components shown in Figure 1-2.

1.2 Wiring diagrams

Use the following wiring diagrams to wire the Rosemount 751 Field Signal Indicator, in series or in parallel, with Rosemount transmitters. Use shielded cable for best results in electrically noisy environments.

Series configuration

It is recommended that the Rosemount 751 Indicator be wired in a series configuration when the 4-20 mA transmitter does not contain a test terminal. The indicator is designed so the analog or LCD display meter can be removed from the housing without impacting the integrity of the 4-20 mA loop. Removal of the entire device from the series configuration will disrupt the loop.

Parallel configuration

It is recommended that the device be wired in a parallel configuration when the 4-20 mA transmitter includes a test terminal. Utilization of the test terminal is required in a parallel configuration. Connecting the indicator across the positive and negative terminals of the 4-20 mA transmitter could impact the loop.

A parallel configuration will allow the removal of the indicator without affecting the integrity of the 4-20 mA loop. Additionally, spare indicators can be added without disrupting the loop.

2  Configuration

2.1  LCD display configuration

The 20-segment bar graph is factory calibrated and represents 4–20 mA directly, but the end points of the LCD display are user-definable. The meter requires a current between 4 and 20 mA in order to be scaled, but the actual value of the current is not significant.

2.1.1  Remove the cover

**WARNING**

Explosions could result in death or serious injury. Do not remove the transmitter cover in explosive atmospheres when the circuit is live.

**Procedure**

Unscrew and remove the transparent housing cover from the LCD display body.

**Note**

The LCD display time-out is approximately 16 seconds. If you do not press the configuration buttons within 16 seconds, the indicator will revert to reading the current signal.

2.1.2  Position the decimal point and select the meter function

**Procedure**

1. Press the left and right configuration buttons simultaneously and release them immediately.

2. To move the decimal point to the desired location, press the left configuration button.

**Note**

The decimal point wraps around.

3. To scroll through the mode options, press the right configuration button repeatedly until the meter displays the desired mode (see Table 2-1).

**Note**

The LCD display time-out is approximately 16 seconds. If you do not press the configuration buttons within 16 seconds, the indicator will revert to reading the current signal.

</tbody>
</table>

Square root function only relates to the digital display. The bar graph output remains linear with the current signal.

Square root response
The digital display will be proportional to the square root of the input current where 4 mA = 0 and 20 mA = 1.0, scaled per the calibration procedure. The transition point from linear to square root is at 25 percent of full scale flow.

Filter response operates upon “present input” and “input received in the previous five second interval” in the following manner:
Display = (0.75 previous input) + (0.25 present input)
This relationship is maintained provided that the previous reading minus the present reading is less than 25 percent of full scale.

2.1.3 Store the information

Procedure
Press both configuration buttons simultaneously for two seconds.

Note
The meter displays “- -” for approximately 7.5 seconds while the information is being stored.

2.1.4 Set the display equivalent to a 4 mA signal

Procedure
1. Press the left configuration button for two seconds.
2. To decrease the display numbers, press the left configuration button. To increase the numbers, press the right configuration button. Set the numbers between –999 and 1000.
3. To store the information, simultaneously press both configuration buttons for two seconds.
2.1.5 Set the display equivalent to a 20 mA signal

Procedure
1. Press the **right** configuration button for two seconds.
2. To decrease the display numbers, press the left configuration button. To increase the numbers, press the right configuration button. Set the numbers between –999 and 9999.

Note
The sum of the 4 mA point and the span must not exceed 9999.

3. To store the information, simultaneously press both configuration buttons for two seconds. The LCD display meter is now configured.

2.1.6 Replace the cover

Procedure
Make sure the rubber gasket is seated properly, and thread the transparent housing cover onto the LCD display meter body.
3 Product Certification

3.1 European Directive Information

A copy of the EU/UK Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EU/UK Declaration of Conformity can be found at Emerson.com/Rosemount.

3.2 Ordinary Location Certification

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

3.3 North America

The US National Electrical Code® (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area classification, gas, and temperature class. This information is clearly defined in the respective codes.

2. 涉及隔爆结合面的维修须联系产品制造商。

3. 产品外壳涂层可能造成静电放电危险；为避免可能引起静电积累，设备只能用湿布清洁外壳涂层表面。
4. 产品使用注意事项：产品外壳设有接地端子，用户在使用时应可靠接地。

5. 安装现场应不存在对产品外壳有腐蚀作用的有害气体。

6. 现场安装时，电缆引入口须选用经国家指定的防爆检验机构检验认可、具有 Ex db IIC Gb 防爆等级的电缆引入装置或堵封件，冗余电缆引入口须用堵封件有效密封。

7. 用于爆炸性气体环境中，现场安装、使用和维护必须严格遵守“断电后开盖!”的警告语。

8. 用户不得自行更换该产品的零部件，应会同产品制造商共同解决运行中出现的故障，以杜绝损坏现象的发生。
