Important

These solenoid valves are intended for use on clean dry air or inert gas, filtered to 40 micrometres or better. The dew point of the media should be at least 10°C (18°F) below the minimum temperature to which any portion of the clean air/inert gas system could be exposed to prevent freezing. If lubricated air is used, the lubricants must be compatible with Nitrile elastomers. Diester oils may cause operational problems. Instrument air in compliance with ANSI/ISA Standard 7.0.01-1996 exceeds the above requirements and is, therefore, an acceptable media for these valves.

*Does not include 8316G334; Includes 8316H374. **Note:** 8553 not available in brass

- ① There are two exhaust flows in the exhaust mode (pilot and main). The pilot exhaust must be connected to the main exhaust when the air or inert gas cannot be exhausted to atmosphere.
- ② For "Quick Exhaust" valves, pressure port is 1/16", exhaust port is 1/4".
- ③ **IMPORTANT:** A Minimum Operating Pressure Differential must be maintained between the pressure and exhaust ports. Supply and exhaust piping must be full area, unrestricted. ASCO flow controls and other similar components must be installed in the cylinder lines only.
- ④ Zero minimum when valve selection gasket is in external position and proper auxiliary air pressure is applied. Minimum 15 psi (1 bar) Operating Pressure Differential when selection gasket is in the internal position.
- ⑤ Can be used for **dry** natural gas service with the EF or EV prefix.
- ⑥ Safety manual and FMEDA (Failure Modes Effects and Diagnostic Analysis) report available.
- ⑦ SIL 3 Capable, Certified by Exida, only valid when used as Normally Closed.
- ⑧ ATEX/IECEx certified with prefix "EV".
- ⑩ Solenoid only approvals with EF or EV prefix.
