CHALLENGE
It can take years for inexperienced plant personnel to master the challenges of safe and efficient plant operation. But with your most knowledgeable personnel potentially leaving your company at any time, you simply don’t have years to wait. New employees must get up to speed in a short amount of time.

OUR SOLUTION
Expedite the learning curve at the Interactive Plant Environment, where Emerson courses are designed to enhance the learner’s training experience for Rosemount™ products simulating real-life plant situations. This immersive training models plant environments, where we can replicate your most common (and unexpected) process scenarios. Our benign oil and water process includes more than 120 measurement points, enabling contextual training within a hazard-free environment. At the Interactive Plant Environment, we’re building process proficiency and know-how that far exceeds basic classroom knowledge.

HOW IT WORKS
Scenario-based learning on Emerson products including:
• Work orders
• Safety permits
Realistic workplace conditions
• Personal Protective Equipment required
• Best practice installations as well as non-conforming best practices
Basic to advanced skill development

WHAT IF...
• You could learn in a simulated process environment
• You could reinforce classroom learning through “real world” lab scenarios
• You could safely learn new technologies in a real process

For more information visit Emerson.com/MyConnect or contact your local Emerson Sales Representative.
