

INTERACTIVE PLANT ENVIRONMENT

Experiential training on Rosemount® products

BUILD TECHNICIAN PROFICIENCY

Learn in a simulated process environment.

Conveniently located in the Emerson Service Center in Charlotte, NC.

Train under Emerson certified instructors with years of field experience.

The bridge from knowledge to know-how

It can take years for inexperienced plant personnel to master the challenges of safe and efficient plant operation. But with your most knowledgeable personnel reaching retirement age, you simply don't have years to wait. New employees must get up to speed in a short amount of time.

Expedite the learning curve at the Interactive Plant Environment, where Emerson™ courses designed for Rosemount® products simulate real-life plant situations. This experiential training facility models a typical plant environment, where we can replicate your most common (and unexpected) process scenarios. Our benign oil and water process includes hundreds of measurement points, enabling contextual training within a hazard-free environment. Give your personnel a unique learning experience that is tailored to your industry. At the Interactive Plant Environment, we're building process proficiency and know-how that far exceeds basic classroom knowledge.

Realistic replication: Our simulated process covers the spectrum of process measurement products and situations your personnel encounter on the job.

BUILD SKILLS. WORK SAFER.

Human factors are a root cause in over 60% of maintenance-related HSE incidents.

– HSE Research Report 213, 2004

Develop practical skillsets and deepen your staff capabilities

Let your personnel hone their craft in our safe, simulated Interactive Plant Environment located inside the Emerson™ Service Center. They'll learn and practice proper responses covering the entire process, under the guidance of Emerson certified instructors with years of field experience.

+ Scenario-based learning

- Learn how to properly address real-world applications through our series of Emerson courses designed for Rosemount® products
- Build in-depth understanding of process measurement points that are relevant to your industry
- Simulate your action items through practice work orders

+ Realistic workplace conditions

- Apply and rehearse proper personal protective equipment (PPE) and safety measures
- Identify potential process problems and learn their solutions
- Gain experience through coursework that logically transfers to your actual plant conditions

+ Basic skills development

- Identify Rosemount products and their measurement functionality
- Understand the basic principles of process measurement product operation
- Learn how to properly configure, calibrate and troubleshoot Rosemount products

Contact your local Emerson representative to schedule training. Or request a tour of the Interactive Plant Environment located inside the Emerson Service Center.
