Slam-shut valves give you the peace of mind knowing that customers and assets are protected

Overview
Slam-shut valves are designed to rapidly shut off the gas flow when the pipeline pressure exceeds or falls below predefined levels. Emerson offers both standalone slam-shuts and integral regulator/slam-shut combinations that utilize a common body where the slam-shut is able to act independently of the regulator.

Applications
- Transmission
- Distribution
- City Gate
- Commercial Service
- Industrial Service
- Residential Service

Benefits
- **System Protection**—Under-pressure and/or overpressure protection of your downstream systems and equipment
- **Zero Emissions**—Environmentally friendly with no leaking or venting to atmosphere
- **Positive Shutoff**—ANSI/FCI Class VIII Bubble-tight shutoff to downstream equipment and systems
- **Easy In-Line Maintenance**—Internal parts can be inspected and replaced without removing the body from the pipeline
- **Reliability**—Trip mechanism designed with accuracy and vibration resistance to avoid unintentional trips

Protect your customers and assets from under and overprotection events while meeting safety and regulatory requirements.
Slam-shut devices protect your system from under and overpressure events

**Slam-Shut Devices**

**VS100 Standalone Series**
- Medium and high capacity body sizes available
- Instantaneous response time
- Complies with the Pressure Equipment Directive (97/23/EC) Requirements
- Modular body construction

**Type OSE**
- Overpressure and under-pressure protection
- High shock and vibration resistance – two-stage tripping mechanism
- Maintains up to ±1% accuracy regardless of inlet pressure, flow rate and size of slam-shut
- Water tight for pit service to 10 ft / 3.0 m
- Remote activation alarm capability

**Integral Slam-Shut Devices**

**CS804 Series**
- Includes the Type VSX8 Slam-shut module for both overpressure and under-pressure protection
- Can be installed in any position (spring case vent to be pointing downward)
- Minimizes cost of ownership
- Simplified maintenance

**Type EZH-OSX**
- Type EZH with a Type OS2 slam-shut device for OPSO/UPSO
- Eliminates nuisance and wasteful bleed gas to atmosphere by utilizing a self-contained control system
- Metal plug design deflects particles and debris thereby providing long life in severe service applications

**Type EZL-OSX**
- Two configurations: OPSO and OPSO/UPSO
- Manual intervention is required for reset meeting DOT requirements
- Can be installed in any position
- Bubble-tight shut off
- Thoroughly tested, high accuracy and robust in design

**Type 299HV**
- Small envelope because of the built-in pilot and internal registration combined with a Type VSX8 slam-shut
- Wide variety of applications – natural gas distribution systems, furnaces, ovens, mixers
- Economical, labor-saving installation
