Emerson Plantweb™ Insight

- Visualization and analytics software platform providing strategic interpretation and monitoring of plant assets
- Relevant-time actionable information and insights about abnormal situations, asset status, asset health, energy costs, emissions loss, etc.
- Seamless system integration, simple installation, and minimal configuration or set-up not dependent on host system or historian
- Pre-packaged analytics based on decades of process and industry experience
- Human centered design and user tested interface for consistent and intuitive navigation

Features and benefits

Gain real-time insights into abnormal situations

- Suite of asset monitoring applications identifying abnormal situations and failures using data analytics and models
- Learn about issues before they impact the bottom line with alerting and failure identification
- The intuitive and easy-to-read views highlight high priority, actionable information

Lightweight, secure, and reliable software package allows seamless integration into current infrastructure

- Easily deployed via a virtual machine
- Access the interface anytime from a multitude of web browsers
- Human centered design considerations allow for quick and intuitive start up and configuration
- Integrate with existing wireless ecosystem to expand capabilities and leverage current investment
- Not dependent on DCS, host system, or historian

Monitor one asset or thousands with a fully scalable software package and numerous applications

- Applications are based on key assets such as steam traps, pumps, heat exchangers, pressure relief valves, and many more
- Start small or monitor all your assets in one spot
- Integration with other business systems such as data historians
- Deploy in small, large, or enterprise-wide operations
User interface

Every application in the Plantweb™ Insight suite has a similar look and feel for a consistent user experience. The main views can be broken into three layers.

Dashboard

The dashboard page is an umbrella overview of the asset class being monitored. This page will provide an aggregated view of the entire asset class and the most important insights. These insights will vary from application to application with examples including asset status, asset health, energy costs, emissions loss, critical alerts, etc. A brief trending of these key insights is also provided for historical tracking and trending.

Asset summary

The asset summary page is a tabular view of all assets being monitored. This view provides a similar perspective as the dashboard but on an asset-by-asset basis. This page is fully sortable, searchable, and filterable for quick prioritization and identification. The asset summary page can also be exported via CSV or Excel® for reporting.

Asset details

The asset details page provides specific asset details. These details include location, process, application, asset, and device details for each individual asset. It also provides calculated insights such as relevant-time status, health, energy, emissions, etc. information and a brief asset history. A notes section allows users to add notes and flag assets for follow-up.
Steam Trap application

**Features**
- In-depth monitoring of steam traps
- Provides relevant time steam trap status including failure modes (blow through, plugged, flooded)
- Steam trap status algorithm based on thousands of real-customer data points and analytics
- Economic and environmental impact displayed in terms of excess energy costs and emissions loss
- Prioritize maintenance based on most problematic or highest impact failed traps

**Calculated insights**
- Steam trap status
  - Good
  - Blow through
  - Plugged
  - Flooded
  - Inactive
- Energy costs
- Emissions loss

**Related products**
- Emerson 1410/1420 Wireless Gateway
- Rosemount™ 708 Wireless Acoustic Transmitter
Pump application

Features
- In-depth monitoring of fixed-speed pumps
- Provides relevant time pump status and alerts (high vibration, cavitation, seal health, etc.)
- Pre-built algorithms based on decades of process experience and industry vetted analytics
- Predictive diagnostics and alert weights allows prioritization of pump maintenance

Calculated insights
- Vibration monitoring
- Cavitation
- Strainer pressure differential
- Process variable thresholds based on baseline capture
- Pump health index
- Abnormal situation awareness in the form of alerts

Related products
- Emerson 1410/1420 Wireless Gateway
- AMS 9420 Wireless Vibration Transmitters
- Rosemount 3051S Wireless Pressure Transmitters
- Rosemount 3308 Wireless Level Transmitters
Heat Exchanger application

Features
- In-depth monitoring of shell and tube heat exchangers
- Provides relevant time heat exchanger status and alerts (fouling, heat duty, etc.)
- Pre-built algorithms based on decades of process experience and industry vetted analytics
- Predictive diagnostics and alert weights allows prioritization of heat exchanger maintenance

Calculated insights
- Heat duty
- Fouling
- Process variable thresholds based on baseline capture
- Heat exchanger health index
- Abnormal situation awareness in the form of alerts

Related products
- Emerson 1410/1420 Wireless Gateway
- Rosemount Wireless Temperature Transmitters
- Rosemount Temperature Sensors
- Rosemount 3051SFC Wireless Flow Meter
- Rosemount 3051S Wireless Differential Pressure Transmitter
Wireless Pressure Gauge application

Features

- “Know before you go” insights into the Rosemount™ Wireless Pressure Gauge
- Provides relevant time pressure status of all wireless pressure gauges
- Manually configure thresholds for alerts
- Manage maintenance with device health indicators

Calculated insights

- Pressure status
  - High pressure warning
  - Low pressure warning
- Overpressure notifications
- Device health

Related products

- Emerson 1410/1420 Wireless Gateway
- Rosemount Wireless Pressure Gauge
Air Cooled Heat Exchanger application

Features
- In-depth monitoring of air cooled heat exchangers
- Provides real-time air cooled heat exchanger status, health, and alerts (fouling, vibration, etc.)
- Pre-built algorithms based on decades of process experience and industry vetted analytics
- Predictive diagnostics and alert weights allows prioritization of maintenance

Calculated insights
- Vibration monitoring
- Fouling
- Louver/pitch defect
- Process variable thresholds based on baseline capture
- Air cooled heat exchanger health index
- Abnormal situation awareness in the form of alerts

Related products
- Emerson 1410/1420 Wireless Gateway
- Rosemount Wireless Temperature Transmitters
- Rosemount Temperature Sensors
- AMS 9420 Wireless Vibration Transmitters
- Fisher™ 4320 Wireless Position Monitor
Pressure Relief Device application

Features
- In-depth monitoring of pressure relief devices (PRD) and pressure relief valves
- Provides real-time indication of PRD releases leaks
- Event log records all PRD releases for one year for EPA reporting
  - Start time
  - Duration
  - Production loss
  - Inspection ID, date, and justification
- Release and leak algorithm release algorithm based on real-customer data points and analytics
- Economic and environmental impact displayed in terms of emissions and production loss
- Prioritize maintenance based on most problematic or highest impact PRDs

Calculated insights
- PRD status
  - Releasing
  - Leaking
  - Healthy
- Production loss
- Emissions loss

Related products
- Emerson 1410/1420 Wireless Gateway
- Rosemount 708 Wireless Acoustic Transmitter
Network Management application

Features
- Provides real-time indication of Gateway health and diagnostics based on Emerson Wireless expertise
- Create drag and drop network diagrams identifying connection paths
- Consolidate syslog of multiple Gateways
- Recognize network load for future planning and expansion

Calculated insights
- Network status
- Network troubleshooting
- Network load

Related products
- Emerson Wireless 1410/1420 Gateways
- Emerson Wireless 781 Field Link
- Cisco® 1552WU
Power Module application

Features
- In-depth monitoring of Emerson Power Modules
- Provides real-time indication of Power Module health and diagnostics
- Power Module estimated remaining life and total estimated life based on Emerson Wireless expertise
- Plan Power Module maintenance on estimated remaining life

Calculated insights
- Power Module status
  - Good
  - Low
  - Critical
- Power Module estimated remaining life
- Power Module total estimated life

Related products
- Emerson Black Power Modules
- Emerson Green Power Modules
- Emerson Blue Power Modules
Cooling Tower application

Features
- In-depth monitoring of cooling tower components including pumps, fin fans, water basins, etc.
- Provides real-time cooling tower status, efficiency and alerts
- Pre-built analytics based on decades of process experience and industry vetted analytics
- Predictive diagnostics and alert weights allow prioritization of cooling tower

Calculated insights
- Cooling tower health index
- Cooling tower efficiency
- Link to pump and air cooled heat exchanger applications for associated asset monitoring
- Process variable thresholds based on baseline capture
- Abnormal situation awareness in the form of alerts

Related products
- Emerson 1410/1420 Wireless Gateway
- Rosemount 3051SFC Wireless Flow Meter
- Rosemount 3051S Wireless Pressure Transmitters
- Rosemount Wireless Temperature Transmitters
- Rosemount Temperature Sensors
Coriolis Meters application

Features

- Real-time meter health; see which meters have issues and what actions are needed before you go into the field
- Status at a glance, continuous, consistent, reliable, and actionable asset data; instantly see the status of your meters on one dashboard, including Smart Meter Verification (SMV) results
- Predictive insights; with real-time visibility to key asset health, you can avoid potential safety hazards and better prioritize maintenance

Calculated insights

- Smart Meter Verification results
- Meter status and process effect alerts
- Recommended alert actions
- Process variable data

Communication specifications

**Modbus® TCP/IP**
Plantweb Insight contains a Modbus TCP interface. Functions, registers and tags are clearly defined within Plantweb Insight.

**HART-IP™ client**
Plantweb Insight acts as a HART-IP client for polling information from HART-IP sources such as Emerson 1410/1420 Gateways.

**OPC UA® client**
Plantweb Insight contains an OPC UA client for accessing information from OPC UA servers.
Ordering information

Table 1: Emerson Plantweb Insight Ordering Information
The starred offerings (★) represent the most common options and should be selected for best delivery. The non-starred offerings are subject to additional delivery lead time.

**Typical Model Number:** 7001X V 002 ST PU WR3

(1) Number of Networks must be selected.
(2) Only applicable to virtual machine installation type.
Specifications

System requirements

Plantweb Insight is delivered as a fully developed virtual machine (ex: .ova file).

Host operating system

Virtualization software

- VMware Workstation Pro™ 10 or higher (requirements can be found here)
  OR
- VMware vSphere® 5.5 or higher (requirements can be found here)
  OR
- Microsoft® Hyper-V 2012 or higher (requirements can be found here)

Guest operating system

- Processors = two
- Memory = 1 GB RAM minimum
- Hard drive = 20 GB of free space

Web client

Browsers (recent versions supported)

- Chrome™ browser
- Microsoft Internet Explorer®
