Magtech™ Magnetic Level Indicators

- Visual level indication to 100 ft. (30 m)
- Designed to ASME B31.3 Process Piping Code. ASME B31.1 Power Piping Code is available upon request
- Minimal leak points as compared to sight glasses
- No process liquid in contact with indicator glass
- Designed for both gas/liquid (top level) and/or liquid/liquid (interface) measurements
- Optional construction is available for cryogenic, high-temperature, high-pressure, and corrosive applications
- Dual chamber design optimized for use with the Rosemount™ 5300, 3308, and 3300 Guided Wave Radars also available
Overview

Measurement principle
Magnetic level indicators consist of a chamber, a magnet equipped float which rises and lowers with the fluid level, and an indicator mounted to the chamber.

The indicator houses a column of small flags, which indicate the level of the fluid in the chamber, based on the position of the float. As the fluid level rises and lowers, the float rises and lowers as well, and the flags are tripped from one orientation to the other; typically the red side indicates the liquid level and the silver side indicates the vapor space.

As the float rises and falls with the process level, tripping the flags, it also stimulates any attached transmitters and switches, providing a signal back to the control system.

Application Examples
- Turbulent tanks
- Heat exchangers
- Boiler applications
- Site glass replacement
- Separators
- Acid storage tanks

Test and inspection
All Magtech chambers can be hydrostatically tested to 1.5 times the specified flange/pressure rating prior to shipment to ensure pressure tolerance.

Additional testing and documentation, such as Material Traceability Reports (MTRs), radiography, hydrostatic pressure tests, Positive Material Identification (PMI), dye penetrant, NACE®, or witness testing are available.
Ordering Information

Magtech Magnetic Level Indicator (MLI)

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment, see Magtech Level Indicator Quick Data Sheet. For more information on Material Selection see page 15.

Additional Information
Specifications: page 15
Dimensional Drawings: page 17

**Typical model number:** L0 76 C AA 1 E 03600 S E 6 AA 1 1 S D 8 Z Z B 8 Z Z F 03600 Z 0 Z Z

1. For flashing applications please consult factory.
2. Maximum mounting dimension per single unit is 20 ft. (6 m) for Style A and 18 ft. (5.5 m) for Style B/C/D.
3. Process connection schedule needs to be equal or greater than the chamber schedule.
4. Must select for Top Vent type Z Option Z.
5. Should be equal to or smaller than the Mounting dimension. Please provide datum offset using Magtech Level Indicator Quick Data Sheet.
Order options - must be specified at time of order

Test and inspection
- Hydrostatic pressure test
- Weld inspection
- NDE (non-destructive examination)

Documentation
- Approval and as-built drawings
- Weld procedures and welder qualifications
- Quality control plans
- Material Traceability Record (MTR)
- Float curves

Accessories
- Valves (vent and drain)
- Insulation blanket
- Steam trace
- Heat trace
- Hard shell cryogenic insulation with frost protection
- Chamber support clips

Associated products
- Dual chamber unit with Guided Wave Radar
- Switches
- Magnetostrictive transmitter

Figure 1. Mounting Styles

- **Style A**: Flanged top and bottom, no side process connection(s)
- **Style B**: Flanged top and bottom with side process connection(s)
- **Style C**: Closed top, flanged bottom with side process connection(s)
- **Style D**: Flanged top, closed bottom with side process connection(s)
- **Style L**: Closed top and bottom with or without side process connection(s)

Specifications

Performance specifications

Resolution
Approximately 1/4-inch resolution

Measuring range
Maximum mounting dimension per single unit is 20 ft. (6 m) for Style A and 18 ft. (5.5 m) for Style B/C/D.

Maximum viscosity
2000 cP

Minimum Specific Gravity (SG)
0.40 (consult factory for lower specific gravities)

Minimum delta SG
0.11

Functional specifications

Temperature rating
850 °F (454 °C)

Float Pressure rating
Up to 4000 psig (275.8 bar) at 100 °F (38 °C)

Visual indicator
Visible from 100 ft (30 m)

Indicator options
- Flag (standard)
- Follower (optional)

Physical specifications

Material selection
Emerson™ provides a variety of products with various options and configurations including materials of construction that can be expected to perform well in a wide range of applications. The product information presented is intended as a guide for the purchaser to make an appropriate selection for the application. It is the purchaser’s sole responsibility to make a careful analysis of all process parameters (such as all chemical components, temperature, pressure, flow rate, abrasives, contaminants, etc.), when specifying product, materials, options and components for the particular application. Emerson is not in a position to evaluate or guarantee the compatibility of the process fluid or other process parameters with the product, options, configuration or materials of construction selected.

Chamber design options
Designed to ASME B31.1 or B31.3, or CRN (all provinces). Welding and welder qualification in accordance with ASME Section IX.
- ASME B31.3
- ASME B31.1
- CRN Registration (all provinces)

Note
Welding and welder qualifications in accordance with ASME Section IX.

Process connection sizes
1/2-in. to 4-in.
Magtech Magnetic Level Indicators

Materials of construction

Chamber
- 300 Series stainless steel (standard 316/316L)
- Optional: Other non-ferrous materials that do not exhibit ferro-magnetic properties such as Alloy C-276, CB20, Alloy 600, Alloy 400, T-321 stainless steel, CPVC, and Kynar.

Float
- 316 stainless steel
- Titanium
- Alloy 400
- Alloy C-276
- Special options: Kynar, CPVC, PTFE coating

Indicator viewing window
Glass or polycarbonate

Gasket
All gauges are shipped complete with 0.125-in. composition gaskets for protection of flanges. Customer is responsible for process compatible gaskets for protection of flanges.

Note
If composition gaskets are not compatible with your process conditions, appropriate gaskets should be used in place of those shipped with the gauge.
