Improve energy efficiency and environmental compliance with acoustic monitoring of steam traps and pressure relief valves

Gain instant visibility to all of your critical steam traps and PRVs through a non-intrusive, WirelessHART® monitoring system

Backed by proven experience in wireless field instrumentation and expert technical support from Emerson™
Emerson’s Wireless Solution

IEC 62591 (WirelessHART)... The industry standard

Self-organizing, adaptive mesh routing

- Know you are backed by Emerson’s proven experience in Wireless field instrumentation and expert technical support
- The self-organizing, self-healing network manages multiple communication paths for any given device. If an obstruction is introduced into the network, data will continue to flow because the device already has other established paths.

Reliable wireless architecture

- Standard IEEE 802.15.4 radios
- 2.4 GHz ISM band sliced into 15 radio-channels
- Time Synchronized Channel Hopping
- Direct sequence spread spectrum (DSSS) technology delivers high reliability in challenging radio environment

Emerson’s Wireless

Seamless integration to all existing host systems

- Native integration into DeltaV™ and Ovation™ is transparent and seamless
- Gateways interface with existing host systems using industry standard protocols including OPC, Modbus® TCP/IP, Modbus RTU, and EtherNet/IP™

Layered security keeps your network safe

- Ensures data transmissions are received only by the wireless Gateway
- Network devices implement industry standard Encryption, Authentication, Verification, Anti-Jamming, and Key Management
- Third party security verification including Achilles and FIPS197- User based login and enforced password strength. Password strength monitoring, user based log in, password reset requirements, automatic lockout, password expiration requirements. Based on guidelines from ISA99.03.03 standard approved level two.

SmartPower™ solutions

- Optimized Emerson instrumentation, both hardware and software, to extend power module life
- SmartPower technologies enable predictable power life

Rosemount 708 Wireless Acoustic Transmitter 3
Ordering Information 4
Specifications 6
Product Certifications 8
Rosemount 708 Wireless Acoustic Transmitter

Ultrasonic acoustic event detection
- Reliably detects and transmits information about acoustic events such as leaks
- Transmitter output includes acoustic level (0 to 255 counts) and temperature (–40 to 260 °C)
- Transmitter communicates process variable and status information via the wireless network for integration into existing host systems

Monitor steam traps
- Steam Trap Monitoring application provides critical, real-time information on the condition of your monitored steam trap population
- Real-time monitoring provides instantaneous feedback for system maintenance and optimization

Monitor pressure relief valves or pressure safety valves
- Turbulence generated by a leaky valve can be detected using the acoustic transmitter
- Notification when release is occurring and when the release has stopped
- Emerson Wireless network provides timestamped information to the host
- Automated data enables reporting of a tamper-proof data log

Mounting flexibility
The wireless acoustic transmitter can be directly mounted to process piping without cutting pipes or changing pipe configurations allowing for a flexible, easy installation.

Reliable transmitter performance
The rugged and robust design of the transmitter ensures reliable performance in harsh environments.
### Ordering Information

Specifications

Functional specifications

Output
IEC 62591 (WirelessHART) 2.4 GHz DSSS

Humidity limits
0–100 percent relative humidity

Transmit rate
User selectable 1 second to 60 minutes

Radio frequency power output from antenna
Internal (WP option) antenna:
Maximum of 10 mW (10 dBm) EIRP

Physical specifications

Material selection
Emerson provides a variety of Rosemount products with various product options and configurations including materials of construction that can be expected to perform well in a wide range of applications. The Rosemount product information presented is intended as a guide for the purchaser to make an appropriate selection for the application. It is the purchaser’s sole responsibility to make a careful analysis of all process parameters (such as all chemical components, temperature, pressure, flow rate, abrasives, contaminants, etc.), when specifying product materials, options, and components for the particular application. Emerson is not in a position to evaluate or guarantee the compatibility of the process fluid or other process parameters with the product options, configuration, or materials of construction selected.

Electrical connections/power module
- Replaceable, non-rechargeable, Intrinsically Safe
  Lithium-Thionyl Chloride power module
- Ten-year power module life at reference conditions(1)

Field Communicator connections
Communication Terminals - Clips permanently fixed to power module

Materials of construction

Housing
PBT/PC

Cover O-ring
Silicone

Power module housing
PBT/PC

Wave guide
Machined 316L SST

Mounting
Transmitters are directly attached to process piping using two stainless steel mounting bands. High temperature mounting hardware should be used when process temperatures exceed 260 °C (500 °F).

Weight
Rosemount 708 with power module – 1.31 lb (0.595 kg)
Rosemount 708 without power module – 0.98 lb (0.445 kg)

Enclosure ratings
NEMA® 4X and IP66/67

Performance specifications

Vibration effect
Tested per the requirements of IEC60770-1 field or pipeline with high vibration level (10–60 Hz 0.21 mm displacement peak amplitude/60–2000 Hz 3 g).

Temperature limits
Ambient limit: −40 to 85 °C (−40 °F to 185 °F)
Storage limit: −40 to 85 °C (−40 °F to 185 °F)
Heat from the process is transferred to the transmitter housing. If the process temperature is high, the ambient temperature will need to be lower to account for heat transferred to the transmitter housing. (see Table 3 on page 7)

---

1. Reference conditions are 70 °F (21 °C), transmit rate of once per minute, and routing data for three additional network devices.
Electro Magnetic Compatibility (EMC)
Meets all relevant requirements of EN 61326-2-3:2013

Wireless output specifications

Acoustic output
0 to 255 counts

Temperature output
–40 to 260 °C (–104 to 500 °F)

Product Certifications

Rev 2.1

European Union Directive Information

A copy of the EU Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EU Declaration of Conformity can be found at Emerson.com/Rosemount.

Telecommunication Compliance

All wireless devices require certification to ensure that they adhere to regulations regarding the use of the RF spectrum. Nearly every country requires this type of product certification. Emerson is working with governmental agencies around the world to supply fully compliant products and remove the risk of violating country directives or laws governing wireless device usage.

FCC and IC

This device complies with Part 15 of the FCC Rules. Operation is subject to the following conditions: This device may not cause harmful interference. This device must accept any interference received, including interference that may cause undesired operation. This device must be installed to ensure a minimum antenna separation distance of 20 cm from all persons.

Ordinary Location Certification

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

Installing in North America

The US National Electrical Code® (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area classification, gas, and temperature class. This information is clearly defined in the respective codes.

USA

I5 U.S.A. Intrinsically Safe (IS)
Certificate: (FM) 3043245
Markings: IS CL I, DIV 1, GP A, B, C, D T4;
CL 1, Zone 0 AEx ia IIC T4;
T4(–40 °C ≤ T_a ≤ +70 °C) when installed per Rosemount drawing 00708-1000; Type 4X

Special Conditions for Safe Use (X):
1. The Rosemount 708 Wireless Acoustic Transmitter shall only be used with the 701PGNKF Rosemount SmartPower battery pack.
2. Potential Electrostatic charging Hazard – See instructions.

Canada

I6 Canada Intrinsically Safe
Certificate: (CSA) 2439890
