Rosemount™ 848T High Density Temperature Measurement Family

- Innovative temperature measurement for high density applications that provide installation and operational savings.
- Independently configurable inputs that support RTD, thermocouple, ohm, mV, 0–10 volt, and 4–20 mA signals.
- Enclosure options and intrinsically safe design allows for installation close to any process, including hazardous areas.
- WirelessHART® capabilities extends the full benefits of Plantweb™ to previously inaccessible locations.
- Industry first measurement validation diagnostic can identify a variety of process concerns including sensor degradation, sensor wiring connectivity, high vibration (affecting the measurement), and abnormal process variations.
High Density Temperature Measurement

Smart Wireless delivers innovative wireless solutions for temperature measurement

- Self-organizing network delivers information rich data with greater than 99 percent data reliability and establishes a highly stable network.
- IEC-approved WirelessHART protocol.
- Emerson SmartPower™ Solutions provide an intrinsically safe power module, allowing field replacements without removing the transmitter from the process, keeping personnel safe and reducing maintenance costs.
- Emerson’s layered approach to wireless network security ensures data transmissions are secure.

FOUNDATION™ Fieldbus provides effective measurements with reduced wiring costs

- Internationally recognized digital network (IEC 61158) supports the connection of up to 16 devices on a single twisted wire pair.
- Allows advanced computations through use of function blocks.
- Provides continuous measurement status for each measurement point.
- Lower costs by reducing wiring, terminations, and required number of I.S. Barriers.

Explore the benefits of Complete Point Solution™ from Rosemount Temperature Measurement

- Emerson offers a selection of RTDs and thermocouples that bring superior durability and Rosemount reliability to temperature sensing.
- A broad thermowell offering meets the demanding requirements of a variety of process applications.

Experience global consistency and local support from worldwide Rosemount Temperature manufacturing sites

- World-class manufacturing provides globally consistent product from every factory and the capacity to fulfill the needs of any project.
- Experienced Instrumentation Consultants help select the right products for each temperature application.
- An extensive global network of Emerson service and support personnel can be onsite when and where they are needed.

Increase performance with High Density transmitters

- Transmit multiple measurements with one set of electronics.
- Mount close to process to reduce sensor wire length and increase measurement reliability.
- Enhance accuracy with EMI correction, cold junction compensation, and device diagnostics.
- Reduce installation costs by as much as 70 percent.

Avoid unnecessary process shutdowns, on-scale failure related issues, and unsafe process conditions with measurement validation diagnostic

- Detect measurement abnormalities and take preventive action before shutdown is necessary.
- Determine validity of data points that are outside of alarm limits.
- Identify on-scale failures and take action before process efficiency and safety is compromised.
- Detect abnormally fast process rates of change before alarm state is reached.
High density temperature measurement

Ideal solution for taking multiple measurements in close proximity to each other such as:
- Bearing temperature on pumps and motors
- Distillation columns
- Furnaces and boilers
- Reactors, storage tanks, and many more

Simplify installation and reduce wiring costs

- Eliminate marshalling
- Less wire routing and fewer terminations
- Faster startups with fewer devices

Access powerful information with new device dashboards

- Leverage Human Centered Design practices to create an intuitive user interface.
- Instantly see status and output of each sensor.
- Direct links to graphical diagnostics and troubleshooting help.
- Drastically lower configuration time.
Rosemount 848T FOUNDATION Fieldbus Temperature Transmitter

The Rosemount 848T offers a low cost solution for high density measurements. The transmitter accepts eight independently configurable sensor inputs, and can be mounted close to the process to improve data quality. FOUNDATION Fieldbus architecture allows up to 128 temperature measurements to be transmitted on a single H1 Fieldbus line. Additionally, the transmitter is bus-powered, further reducing the amount of required wiring to install the device. The robust design has proven itself in thousands of successful installations. Capabilities include:

- Eight independently configurable inputs, including 2- and 3-wire RTDs, thermocouples, mV, 2- and 3-wire ohms, and 4–20 mA signals
- Industry first measurement validation diagnostic
- Fieldbus functionality with eight AI blocks, 2 MAI blocks, 4 ISEL Blocks, and backup LAS capabilities
- 600 Vdc isolation and integral transient protection

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 28 for more information on material selection.

**Line filter**

| F5 | 50 Hz line voltage filter | ★                                |
**Wiring**

**Figure 1. Rosemount 848T Sensor Wiring Diagram**

1. Emerson provides 4-wire sensors for all single-element RTDs. Use these RTDs in 3-wire configurations by clipping the fourth lead or leaving it disconnected and insulated with electrical tape.
2. The transmitter must be configured for a 3-wire RTD in order to recognize an RTD with a compensation loop.

1. For all eight sensors.
Specifications

Functional specifications

Inputs

Eight independently configurable channels including combinations of 2- and 3-wire RTDs, thermocouples, mV, and 2- and 3-wire ohm inputs. 4–20 mA inputs using optional connector(s).

Outputs

Manchester-encoded digital signal that conforms to IEC 61158 and ISA 50.02.

Status

If self-diagnostics detect a sensor burnout or a transmitter failure, the status of the measurement will be updated accordingly.

Ambient temperature limits

\(-40\) to \(185 \, ^\circ\text{F}\) (\(-40\) to \(85 \, ^\circ\text{C}\))

Accuracy

\((\text{Pt 100 at reference condition: } 20 \, ^\circ\text{C}) \pm 0.30 \, ^\circ\text{C} (\pm 0.54 \, ^\circ\text{F})\); for the complete list, see “Accuracy” on page 10.

Isolation

- 600 Vdc channel to channel isolation\(^1\).
- 10 Vdc channel to channel isolation for all operating conditions with maximum 150 meters (500 feet) of sensor lead length 18 AWG.

Power supply

Powered over FOUNDATION Fieldbus with standard fieldbus power supplies. The transmitter operates between 9.0 and 32.0 Vdc, 22 mA maximum. (transmitter power terminals are rated to 42.4 Vdc.)

Transient protection

The transient protector (option code T1) helps to prevent damage to the transmitter from transients induced on the loop wiring by lightning, welding, heavy electrical equipment, or switch gears. This option is installed at the factory for the Rosemount 848T and is not intended for field installation.

Update time

Approximately 1.5 seconds to read all eight inputs

Humidity limits

0–99 percent non-condensing relative humidity

Turn-on time

Performance within specifications is achieved in less than 30 seconds after power is applied to the transmitter.

Alarms

The AI and ISEL function blocks allow the user to configure the alarms to HI-HI, HI, LO, or LO-LO with a variety of priority levels and hysteresis settings.

Electromagnetic compatibility compliance testing

- Meets the criteria under European Union Directive 2004/108/EC.
- Meets the criteria under IEC 61326: 2006.

Stability

- \(\pm 0.1\%\) of reading or \(0.1 \, ^\circ\text{C} (0.18 \, ^\circ\text{F})\), whichever is greater, for two years for RTDs.
- \(\pm 0.1\%\) of reading or \(0.1 \, ^\circ\text{C} (0.18 \, ^\circ\text{F})\), whichever is greater, for one year for thermocouples.

Self calibration

The transmitter’s analog-to-digital circuitry automatically self-calibrates for each temperature update by comparing the dynamic measurement to extremely stable and accurate internal reference elements.

Vibration effect

Tested to the following with no effect on performance per IEC 60770-1, 1999.

<table>
<thead>
<tr>
<th>Frequency acceleration</th>
<th>10-60 Hz</th>
<th>60-2000 Hz</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>0.21 mm peak displacement</td>
<td>3 g</td>
</tr>
</tbody>
</table>

Backup Link Active Scheduler (LAS)

The transmitter is classified as a device link master, which means it can function as a LAS if the current link master device fails or is removed from the segment.

The host or other configuration tool is used to download the schedule for the application to the link master device. In the absence of a primary link master, the transmitter will claim the LAS and provide permanent control for the H1 segment.

\(^1\) Reference conditions are \(-40 \, ^\circ\text{C} (\text{\(-40 \, ^\circ\text{F}\)})\) with 30 meters (100 feet) of sensor lead length 18 AWG wire.
Software upgrade in the field

Software for the Rosemount 848T with FOUNDATION Fieldbus is easy to upgrade in the field using the FOUNDATION Fieldbus Common Device Software Download procedure.

Physical specifications

Conformance to specifications (±3σ [Sigma])

Technology leadership, advanced manufacturing techniques, and statistical process control ensure specification conformance to at least ±3σ.

Mounting

The Rosemount 848T can be mounted directly onto a DIN rail or it can be ordered with an optional junction box. When using the optional junction box, the transmitter can be mounted onto a panel or a 2-in. pipe stand (with option code B6).

Entries for optional junction box

No entry

- Used for custom fittings.

Cable gland

- 9 × M20 nickel-plated brass glands for 7.5–11.9 mm unarmored cable

Conduit

- Five plugged 0.86-in. diameter holes suitable for installing 1/2-in. NPT fittings.

1. Add 35.2 oz (2.2 lb, 0.998 kg) for nickel-plated brass glands.

Environmental ratings

Type 4X and IP66 with optional junction box. JX3 Explosion-proof enclosure rated to −4 °F (−20 °C).

Function blocks

Analog Input (AI)

- Processes the measurement and makes it available on the fieldbus segment.
- Allows filtering, alarming, and engineering unit changes.

Input Selector (ISEL)

- Used to select between inputs and generate an output using specific selection strategies such as minimum, maximum, midpoint, or average temperature.
- Since the temperature value always contains the measurement status, this block allows the selection to be restricted to the first “good” measurement.

Multiple Analog Input Block (MAI)

- The MAI block allows the eight AI blocks to be multiplexed together so they serve as one function block on the H1 segment, resulting in greater network efficiency.

1. Requires the S002 option code.
Differential configuration notes

Differential capability exists between any two sensor types.

For all differential configurations, the input range is X to Y where

\[ X = \text{Sensor A minimum} - \text{Sensor B max.} \]
\[ Y = \text{Sensor A maximum} - \text{Sensor B min.} \]

Accuracy for differential configurations

If sensor types are similar (for example, both RTDs or both thermocouples), the accuracy = 1.5 times worst case accuracy of either sensor type. If sensor types are dissimilar (for example, one RTD and one thermocouple), the accuracy = Sensor 1 Accuracy + Sensor 2 Accuracy.

Analog sensors 4–20mA

Two types of alarm levels are available with 4–20 mA sensors on the Rosemount 848T. These types must be ordered with the S002 option code complete with an analog connector kit. The alarm levels, accuracy for each type are listed in Table 3.

Table 3. Analog Sensors

1. Change in ambient is in reference to the calibration temperature of the transmitter (20 °C [68 °F] typical from the factory).
2. Ambient temperature effect specification valid over minimum temperature span of 28 °C (50 °F).
Ambient temperature notes

Examples

When using a Pt 100 ($\alpha = 0.00385$) sensor input at 30 °C ambient temperature:

- Ambient temperature effects: $0.003 \times (30 - 20) = 0.03 \, ^{\circ}C$
- Worst case error: Sensor accuracy + Ambient temperature effects = $0.30 \, ^{\circ}C + 0.03 \, ^{\circ}C = 0.33 \, ^{\circ}C$
- Total probable error: $\sqrt{0.30^2 + 0.03^2} = 0.30 \, ^{\circ}C$
Product Certifications

Rev 2.4

European Directive Information

A copy of the EU Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EU Declaration of Conformity can be found at Emerson.com/Rosemount.

Ordinary Location Certification

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by FM Approvals, a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

North America

The US National Electrical Code® (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area classification, gas, and temperature class. This information is clearly defined in the respective codes.

USA

I5  FM Intrinsically Safe and Nonincendive
Certificate: 3011568
Markings:  IS CL I, DIV 1, GP A, B, C, D; T4(−50 °C ≤ T9 ≤ +60 °C); NI CL I, DIV 2, GP A, B, C, D; T4A(−50 °C ≤ T9 ≤ +85 °C); T5(−50 °C ≤ T9 ≤ +70 °C) when installed per Rosemount drawing 00848-4404

Note
Transmitters marked with Nonincendive CL I, DIV 2 can be installed in Division 2 locations using general Division 2 wiring methods or Nonincendive Field Wiring (NIFW). See Drawing 00848-4404.

IE  FM FISCO
Certificate: 3011568
Markings:  IS CL I, DIV 1, GP A, B, C, D; T4(−50 °C ≤ T9 ≤ +60 °C); NI CL I, DIV 2, GP A, B, C, D; T4A(−50 °C ≤ T9 ≤ +85 °C); T5(−50 °C ≤ T9 ≤ +70 °C) when installed per Rosemount drawing 00848-4404

N5  Nonincendive and Dust-Ignitionproof
Certificate: 3011568
Markings:  NI CL I, DIV 2, GP A, B, C, D; T4(−50 °C ≤ T9 ≤ +85 °C); T5(−50 °C ≤ T9 ≤ +70 °C) when installed per Rosemount drawing 00848-4404; Type 4X

NK  Nonincendive
Certificate: 3011568
Markings:  NI CL I, DIV 2, GP A, B, C, D; T4A(−50 °C ≤ T9 ≤ +85 °C); T5(−50 °C ≤ T9 ≤ +70 °C) when installed per Rosemount drawing 00848-4404

Note
Only the N5 and NK are valid with the S002 option.

5. The product complies to the requirements for FISCO field devices specified in IEC60079-27: 2008. For the connection of an intrinsically safe circuit in accordance FISCO model, FISCO parameters of this product are as above.
6. The product should be used with Ex-certified associated apparatus to establish explosion protection system that can be used in explosive gas atmospheres. Wiring and terminals should comply with the instruction manual of the product and associated apparatus.
7. The cables between this product and associated apparatus should be shielded cables (the cables must have insulated shield). The shielded cable has to be grounded reliably in non-hazardous area.
8. End users are not permitted to change any component's insides, but to settle the problem, in conjunction with manufacturer to avoid damage to the product.
9. During installation, use and maintenance of this product, observe following standards:
   - GB3836.13-2013 “Electrical apparatus for explosive gas atmospheres Part 13: Repair and overhaul for apparatus used in explosive gas atmospheres”
   - GB3836.15-2000 “Electrical apparatus for explosive gas atmospheres Part 15: Electrical installations in hazardous area (other than mines)"
   - GB3836.16-2006 “Electrical apparatus for explosive gas atmospheres Part 16: Inspection and maintenance of electrical installation (other than mines)"
   - GB3836.18-2010 “Explosive Atmospheres Part 18: Intrinsically Safe System"
   - GB50257-2014 “Code for construction and acceptance of electric device for explosion atmospheres and fire hazard electrical equipment installation"

N3 NEPSI Type n
Certificate: GYJ17.1008U
Standards: GB3836.1-2010, GB3836.8-2014
Markings: Ex na n IIC T4/T5 Gc

Schedule of Limitations (U):
1. This component is not capable of withstanding the 500 V electrical strength test defined in Clause 6.5.1 of GB3836.8-2014. The must be taken into account during installation.
2. This component must be housed in a suitable component certified enclosure that provides a degree of protection of at least IP54 and meets the relevant material and environmental requirements of GB3836.1-2010 and GB3836.8-2014.
3. Provision must be made, external to the component, to ensure the rated voltage of the component supply is not exceeded by transient disturbances of more the 40%.
4. The ambient temperature range is:

<table>

Rosemount 848T Wireless Temperature Transmitter

The Rosemount 848T is the premier choice for Wireless High Density measurements. Four independently configurable inputs are transmitted through WirelessHART. Costs per point are dramatically reduced through the use of smart wireless networks, with the same reliability and security of wired solutions. Additionally, the field hardened enclosure is suitable for installation in IS areas. Capabilities include:

- Four independently configurable inputs, including 2-, 3- and 4-wire RTDs, thermocouples, 0-1000mV and 0-10V, 2-, 3- and 4-wire ohms, and 4-20 mA signals.
  - Intrinsically safe, long lasting power module, which utilizes Emerson’s SmartPower Technology
  - Configurable high and low alerts to improve process performance
  - Easy to use Device Dashboard, used to configure, monitor, and troubleshoot the Rosemount 848T

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 28 for more information on Material Selection.

Typical model number: 848T X I5 S001 WA3 WK1 B6 HA1

1. Only available with product certifications NA and NS. Stable resistors included.
2. Dual channel voltage adapter will be installed on channels 1 and 2.
3. Required for wireless.
4. WK1 or WM1 required for wireless.
5. Black power module must be shipped separately, order Model 701PBKKF or Part# 00753-9220-0001.
6. HA1 or HA2 required for wireless.
**WirelessHART... the Industry Standard**

**Self-organizing, adaptive mesh routing**
- No wireless expertise required, devices automatically find the best communication paths.
- Network continuously monitors paths for degradation and repairs itself.
- Adaptive behavior provides reliable, hands-off operation and simplifies network deployments, expansion and reconfiguration.
- Supports both star and mesh topologies.

**Industry standard radio with channel hopping**
- Standard IEEE 802.15.4 radios
- 2.4 GHz ISM band sliced into 16 radio-channels.
- Continually “hop” across channels to avoid interference and increase reliability.
- Frequency hopping spread spectrum (FHSS) technology delivers high reliability in challenging radio environment.

**Self-healing network**
- If an obstruction is introduced into the mesh network, devices will automatically find the best alternate communication path.
- This allows the network to instantly change to the new path without any loss in data.

**Seamless integration to existing hosts**
- Transparent and seamless integration.
- Same control system applications.
- Gateways connect using industry protocols.
Specifications

Functional specifications

Input
Four independently configurable input channels that supports Thermocouple, RTD, mV, 0-10 V, ohm, and 4–20 mA, input types. See “Accuracy” on page 30 for sensor options.

Output
IEC 62591 (WirelessHART), 2.4 GHz DSSS

Ambient temperature limits
−40 to 85 °C (−40 to 185 °F)

Humidity limits
0–99% non-condensing relative humidity

Update rate
User selectable, 4 sec to 60 min.

Accuracy
(Pt 100 @ reference condition: 20 °C)
±0.30 °C (±0.54 °F)
For the complete list see “Accuracy” on page 30.

Isolation
Isolation between all sensor channels is rated to 10 Vdc over all operating conditions. No damage will occur to the device with up to 250 Vdc between any sensor channels.

Alerts
Message sent when open or short sensor is detected

Electromagnetic Compatibility (EMC)
- Meets the criteria under European Union Directive 2004/108/EC
- Meets all relevant requirements of EN 61326

Transmitter stability
- ±0.15% of reading or 0.15 °C (0.27 °F), whichever is greater, for 2 years for RTDs
- ±0.15% of reading or 0.15 °C (0.27 °F), whichever is greater, for 1 year for thermocouples

Self calibration
The analog-to-digital measurement circuitry automatically self-calibrates for each temperature update by comparing the dynamic measurement to extremely stable and accurate internal reference elements.

Vibration effect
Tested to the following with no effect on performance per IEC 60770-1, 1999.

<table>
<thead>
<tr>
<th>Frequency acceleration</th>
<th>Displacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>10-60 Hz</td>

Physical specifications

Material selection
Emerson provides a variety of Rosemount product with various product options and configurations including materials of construction that can be expected to perform well in a wide range of applications. The Rosemount product information presented is intended as a guide for the purchaser to make an appropriate selection for the application. It is the purchaser’s sole responsibility to make a careful analysis of all process parameters (such as all chemical components, temperature, pressure, flow rate, abrasives, contaminants, etc.), when specifying product, materials, options and components for the particular application. Emerson is not in a position to evaluate or guarantee the compatibility of the process fluid or other process parameters with the product, options, configuration or materials of construction selected.

Conformance to specifications (±3σ [Sigma])
Technology leadership, advanced manufacturing techniques, and statistical process control ensure specification conformance to at least ±3σ.

Electrical connections

Power module
The Emerson SmartPower Power Module is field replaceable, featuring keyed connections that eliminate the risk of incorrect installation. The power module is an Intrinsically Safe solution, containing the Lithium-thionyl chloride with a polybutadine terephthalate (PBT) enclosure. The 848T Wireless has a power module life time rating of six years with a one-minute update rate, at reference conditions.(1)

1. Reference conditions are 68 °F (20 °C), and routing data for three additional network devices.
   Note: Continuous exposure to ambient temperature limits (−40 °F or 185 °F) (−40 °C or 85 °C) may reduce specified life to less than 20 percent.
Sensor terminals
Sensor terminals permanently fixed to terminal block

Field Communicator connections

Communication terminals
Clips permanently fixed to terminal block

Materials of construction

Enclosure
Housing - Low-copper aluminum
Paint - Polyurethane
Cover O-ring - Silicone

Terminal Block and Power Module
PBT

Antenna
PBT/Polycarbonate (PC) integrated omni-directional antenna

Mounting
Transmitter can be panel mounted, or be mounted onto a 2-in. pipe stand (with option code B6). Sensors must be remotely mounted, as transmitter conduit entries are not designed for direct sensor mounting.

Weight
Rosemount 848T Wireless - 4.75 lb. (2.15 kg)

Enclosure ratings (Rosemount 848T Wireless)
Housing option codes HA1 or HA2 are Type 4x and IP66.

Sensor connections

Optional voltage adapter
The Rosemount 848T Wireless voltage adapter allows voltage measurement from 0-10 volts. For this capability, one or two adapters are required. Each adapter accommodates 2 voltage inputs, and can be installed interchangeably on inputs 1 and 2 or 3 and 4.

The divider is ordered using option codes S003 or S004, and can also be purchased as a spare part.

</tbody>
</table>

1. Change in ambient is in reference to the calibration temperature of the transmitter (20 °C [68 °F] typical from the factory).
2. Ambient temperature effect specification valid over minimum temperature span of 28 °C (50 °F).
Ambient temperature notes

Examples

When using a Pt 100 ($\alpha = 0.00385$) sensor input at 30 °C ambient temperature, temperature effects would be:

- Ambient temperature effects: $0.003 \, ^\circ C \times (30 - 20) = 0.03 \, ^\circ C$
- Worst case error: Sensor accuracy + Ambient temperature effects = $0.30 \, ^\circ C + 0.03 \, ^\circ C = 0.33 \, ^\circ C$
- Total probable error: $\sqrt{0.30^2 + 0.03^2} = 0.30 \, ^\circ C$
Product Certifications

Rev 1.4

Telecommunication Compliance

All wireless devices require certification to ensure that they adhere to regulations regarding the use of the RF spectrum. Nearly every country requires this type of product certification. Emerson is working with governmental agencies around the world to supply fully compliant products and remove the risk of violating country directives or laws governing wireless device usage.

FCC and IC

This device complies with Part 15 of the FCC Rules. Operation is subject to the following conditions: This device may not cause harmful interference. This device must accept any interference received, including interference that may cause undesired operation. This device must be installed to ensure a minimum antenna separation distance of 20 cm from all persons.

European Directive Information

A copy of the EU Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EU Declaration of Conformity can be found at Emerson.com/Rosemount.

Ordinary Location Certification

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

North America

The US National Electrical Code (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area classification, gas, and temperature class. This information is clearly defined in the respective codes.

USA

I5 FM Intrinsically Safe
Certificate: 303437
Markings: IS CL I, DIV 1, GP A, B, C, D; NI CL I, DIV 2, GP A, B, C, D; IS CL I, Zone 0, AEx ia IIC T4(–50 °C ≤ Tₐ ≤ +70 °C), when installed per Rosemount drawing 00849-1000; Type 4X; IP66
See Table 16 on page -36 at the end of the Product Certifications section for Entity Parameters.

N5 FM Class I, Division 2, and Dust Ignition-proof
Certificate: 3034378
Markings: NI CL I, DIV 2, GP A, B, C, D; T4(–50 °C ≤ Tₐ ≤ +70 °C); DIP CL II/III DIV 1, GP E, F, G; –50 °C ≤ Tₐ ≤ +85 °C; when installed per Rosemount drawing 00849-1000; Type 4X; IP66

Canada

I6 CSA Intrinsically Safe
Certificate: 1261865
Markings: Intrinsically Safe for CL I, DIV 1 GP A, B, C, D; Suitable for CL I DIV 2 GP A, B, C, D; when installed per Rosemount drawing 00849-1016; T3C; Type 4X, IP66
See Table 16 on page -36 at the end of the Product Certifications section for Entity Parameters.

N6 CSA Class I, Division 2
Certificate: 1261865

Europe

I1 ATEX Intrinsic Safety
Certificate: Baseefa09ATEX0022X
Markings: Ex ia IIC T4/T5 Ga, T4(–60 °C ≤ Tₐ ≤ +70 °C), T5(–60 °C ≤ Tₐ ≤ +40 °C); See Table 16 on page -36 at the end of the product certifications section for entity parameters.
Special Conditions for Safe Use (X):

1. The surface resistivity of the antenna is greater than 1 GΩ. To avoid electrostatic charge build-up, it must not be rubbed or cleaned with solvents or a dry cloth.
2. The Model 701PBKKF Power Module or Intelligent Power Module 71008 may be replaced in a hazardous area. The Power Modules have surface resistivity greater than 1 GΩ and must be properly installed in the wireless device enclosure. Care must be taken during transportation to and from the point of installation to prevent electrostatic charge build-up.
3. The enclosure may be made from aluminum alloy and given a protective polyurethane paint finish; however, care should be taken to protect it from impact or abrasion when located in a zone 0 area.

International

I7  IECEx Intrinsic Safety
Certificate: IECEx BAS 09.0004X
Markings: Ex ia IIC T4/T5 Ga, T4(−60 °C ≤ Ta ≤ +70 °C), T5(−60 °C ≤ Ta ≤ +40 °C);
See Table 16 on page -36 at the end of the Product Certifications section for Entity Parameters.

Special Conditions for Safe Use (X):

1. The surface resistivity of the antenna is greater than 1 GΩ. To avoid electrostatic charge build-up, it must not be rubbed or cleaned with solvents or a dry cloth.
2. The Model 701PBKKF Power Module may be replaced in a hazardous area. The power module has surface resistance greater than 1 GΩ and must be properly installed in the wireless device enclosure. Care must be taken during transportation to and from the point of installation to prevent electrostatic charge build-up.
3. Manufacture-provided battery pack made up of two Tadiran TL-5920 Lithium Thionyl-Chloride primary cells should be used.
4. The product should be used with Ex-certified associated apparatus to establish explosion protection system that can be used in explosive gas atmospheres. Wiring and terminals should comply with the instruction manual of the product and associated apparatus.
5. The cables between this product and associated apparatus should be shielded cables (the cables must have insulated shield). The shield has to be grounded reliably in non-hazardous area.
6. End user is not permitted to change any components inside, but to settle the problem in conjunction with manufacturer to avoid damage to the product.
7. When installation, use and maintenance of this product, observe following standards:
   GB3836.13-2013 “Electrical apparatus for explosive gas atmospheres Part 13: Repair and overhaul for apparatus used in explosive gas atmospheres”
   GB3836.15-2000 “Electrical apparatus for explosive gas atmospheres Part 15: Electrical installations in hazardous area (other than mines)”
   GB3836.16-2006 “Electrical apparatus for explosive gas atmospheres Part 16: Inspection and maintenance of electrical installation (other than mines)”
   GB3836.18-2010 " Explosive Atmospheres Part 18: Intrinsically Safe System
   GB50257-2014 “Code for construction and acceptance of electric device for explosion atmospheres and fire hazard electrical equipment installation engineering”

EAC – Belarus, Kazakhstan, Russia

IM  Technical Regulations Customs Union (EAC) Intrinsic Safety
Markings: 0Ex ia IIC T4, T5 Ga X, T4(−60 °C ≤ Tₐ ≤ +70 °C), T5(−60 °C ≤ Tₐ ≤ +40 °C), IP66/IP67
See Table 16 on page -36 at the end of the Product Certifications section for Entity Parameters.

Japan

I4  TIIIS Intrinsic Safety
Certificate: TC19154
Markings: Ex ia IIC T4, T4(−20 °C ≤ Tₐ ≤ +60 °C)
See Table 16 on page -36 at the end of the Product Certifications section for Entity Parameters.

Additional Certifications

SBV Bureau Veritas (BV) Type Approval
Certificate: 26325/A3 BV
Requirements: Bureau Veritas Rules for the Classification of Steel Ships
