1 About this guide

This guide provides basic guidelines for Rosemount 3051 Transmitters. It does not provide instructions for configuration, diagnostics, maintenance, service, troubleshooting, Explosion-Proof, Flame-Proof, or intrinsically safe (I.S.) installations. Refer to the Rosemount 3051 Reference Manual for more instructions. This guide is also available electronically on Emerson.com/Rosemount.

1.1 Safety messages

Before installing the transmitter, confirm the correct device driver is loaded on the host systems.

Procedures and instructions in this section may require special precautions to ensure the safety of the personnel performing the operations.

⚠️ WARNING

Explosions

Explosions could result in death or serious injury.

Installation of this transmitter in an explosive environment must be in accordance with the local, national, and international standards, codes, and practices.

Before connecting a handheld communicator in an explosive atmosphere, ensure that the instruments in the loop are installed in accordance with intrinsically safe or non-incendive field wiring practices.

In an explosion-proof/flameproof installation, do not remove the transmitter covers when power is applied to the unit.

Process leaks

Process leaks could result in death or serious injury. Process leaks may cause harm or result in death. Process leaks may cause harm or result in death.

Install and tighten process connectors before applying pressure.

To avoid process leaks, only use the O-ring designed to seal with the corresponding flange adapter.

Electrical shock

Electrical shock could cause death or serious injury. Electrical shock can result in death or serious injury. Electrical shock can result in death or serious injury.

Avoid contact with the leads and terminals. High voltage that may be present on leads can cause electrical shock.
**WARNING**

**Conduit/cable entries**

Unless marked, the conduit/cable entries in the transmitter housing use a ½–14 NPT thread form. Entries marked “M20” are M20 × 1.5 thread form. On devices with multiple conduit entries, all entries will have the same thread form. Only use plugs, adapters, glands, or conduit with a compatible thread form when closing these entries.

When installing in a hazardous location, use only appropriately listed or Ex certified plugs, glands, or adapters in cable/conduit entries.

**Physical access**

Unauthorized personnel may potentially cause significant damage to and/or misconfiguration of end users’ equipment. This could be intentional or unintentional and needs to be protected against.

Physical security is an important part of any security program and fundamental to protecting your system. Restrict physical access by unauthorized personnel to protect end users’ assets. This is true for all systems used within the facility.
2 Mount the transmitter

2.1 Liquid flow applications

Procedure
1. Place taps to the side of the line.
2. Mount beside or below the taps.
3. Mount the transmitter so that the drain/vent valves are oriented upward.

2.2 Gas flow applications

Procedure
1. Place taps in the top or side of the line.
2. Mount beside or above the taps.

Note
Bracket required to support the transmitter and the ¼-in. tubing going into the transmitter.
2.3 Steam flow applications

Procedure

1. Place taps to the side of the line.
2. Mount beside or below the taps.
3. Fill impulse lines with water.
2.4 Panel and pipe mount

Figure 2-1: Panel and Pipe Mounting

Panel mount

Pipe mount

Coplanar flange

Traditional flange

Rosemount 3051T

Rosemount 3051H

(1) 5/16 x 1 1/2 panel bolts are customer supplied.
2.5 Bolting considerations

If the transmitter installation requires assembly of the process flanges, manifolds, or flange adapters, follow these assembly guidelines to ensure a tight seal for optimal performance characteristics of the transmitters. Use only bolts supplied with the transmitter or sold by Emerson as spare parts. Figure 2-2 illustrates common transmitter assemblies with the bolt length required for proper transmitter assembly.

Figure 2-2: Common Transmitter Assemblies

A. Transmitter with coplanar flange
B. Transmitter with coplanar flange and optional flange adapters
C. Transmitter with traditional flange and optional flange adapters
D. Transmitter with coplanar flange and optional manifold and flange adapters

Bolts are typically carbon steel or stainless steel. Confirm the material by viewing the markings on the head of the bolt and referencing Table 2-1. If bolt material is not shown in Table 2-1, contact the local Emerson representative for more information.

2.5.1 Bolt installation

Note
Carbon steel bolts do not require lubrication and the stainless steel bolts are coated with a lubricant to ease installation. However, no additional lubricant should be applied when installing either type of bolt.

Procedure

1. Finger-tighten the bolts.
2. Torque the bolts to the initial torque value using a crossing pattern (see Table 2-1 for torque values).

3. Torque the bolts to the final torque value using the same crossing pattern (see Table 2-1 for torque values).

4. Verify that the flange bolts are protruding through the isolator plate before applying pressure.

**Table 2-1: Torque Values for the Flange and Flange Adapter Bolts**

2.6 O-rings with flange adapters

**WARNING**

Failure to install proper flange adapter O-rings may cause process leaks, which can result in death or serious injury. The two flange adapters are distinguished by unique O-ring grooves. Only use the O-ring that is designed for its specific flange adapter, as shown below.

*Figure 2-3: O-ring Location*

Rosemount 3051S/3051/2051

A. Flange adapter  
B. O-ring  
C. PTFE-based profile (square)  
D. Elastomer profile (round)

Whenever the flanges or adapters are removed, visually inspect the O-rings. Replace them if there are any signs of damage, such as nicks or cuts. If you replace the O-rings, re-torque the flange bolts and alignment screws after installation to compensate for seating of the PTFE O-ring.

2.7 Environmental seal for housing

For NEMA® 4X, IP66, and IP68 requirements, use thread sealing (PTFE) tape or paste on male threads of conduit to provide a water and dust tight seal. Consult factory if other ingress protection ratings are required.

Always ensure a proper seal by installing the electronics housing cover(s) so that metal contacts metal. Use Rosemount O-rings.

For M20 threads, install conduit plugs to full thread engagement or until mechanical resistance is met.
2.8 **In-line gage transmitter orientation**

The low side pressure port (atmospheric reference) on the in-line gage transmitter is located in the neck of the transmitter, behind the housing. The vent path is 360° around the transmitter between the housing and sensor. (See Figure 2-4.)

Keep the vent path free of any obstruction including but not limited to paint, dust, and lubrication by mounting the transmitter so that fluids can drain away.

---

**Figure 2-4: In-line Gage Low Side Pressure Port**

A. Pressure port location
3 Housing rotation

To improve field access to wiring or to better view the optional LCD display:

Procedure

1. Loosen the housing rotation set screw using a 5/64-in. hex wrench.
2. Turn the housing left or right up to a maximum of 180° from its original position. (3)
3. Re-tighten the housing rotation set screw to a maximum of 7 in-lb when desired location is reached.

Note
Over-rotating will damage the transmitter.

Figure 3-1: Housing Rotation

(3) Rosemount 3051C original position aligns with "H" side; Rosemount 3051T original position is the opposite side of the bracket holes.
4 Set the jumpers

If alarm and security jumpers are not installed, the transmitter will operate normally with the default alarm condition alarm *high* and the security *off*.

**Procedure**

1. If the transmitter is installed, secure the loop, and remove power.
2. Remove the housing cover opposite the field terminal side. Do not remove the instrument cover in explosive atmospheres when the circuit is live.
3. Reposition the jumper. Avoid contact with the leads and the terminals. See Figure 4-1 for the location of the jumper and the ON and OFF positions.
4. Reattach the transmitter cover. The cover must be fully engaged to comply with explosion-proof requirements.

5 Connect the wiring and power up

Figure 5-1 shows wiring connections necessary to power a Rosemount 3051 and enable communications with a handheld communicator.

Use the following steps to wire the transmitter:

Procedure

1. Remove the housing cover on the field terminals side.
2. Connect the positive lead to the “+” terminal (PWR/COMM) and the negative lead to the “−” terminal.
3. Ensure full contact with terminal block screw and washer. When using a direct wiring method, wrap wire clockwise to ensure it is in place when tightening the terminal block screw.

   The use of a pin or a ferrule wire terminal is not recommended as the connection may be more susceptible to loosening over time or under vibration.

4. Ensure proper grounding.

   It is important that the instrument cable shield:
   - Be trimmed close and insulated from touching the transmitter housing
   - Be connected to the next shield if cable is routed through a junction box
   - Be connected to a good earth ground at the power supply end

   Do not connect the powered signal wiring to the test terminals. Power could damage the test diode in the test connection. Shielded twisted pair cable should be used for best results. Use 24 AWG or larger wire and do not exceed 5,000 ft (1500 m).

5. Plug and seal unused conduit connections.
6. If applicable, install wiring with a drip loop. Arrange the drip loop so the bottom is lower than the conduit connections and the transmitter housing.
7. Replace the housing cover.
5.1 **Signal wiring grounding**

Do not run signal wiring in conduit or open trays with power wiring, or near heavy electrical equipment. Grounding terminations are provided on the outside of the electronics housing and inside the terminal compartment. These grounds are used when transient protect terminal blocks are installed or to fulfill local regulations. See **Step 2** for more information on how the cable shield should be grounded.
Procedure

1. Remove the field terminals housing cover.
2. Connect the wiring pair and ground as indicated in Figure 5-3.
   - Be trimmed close and insulated from touching the transmitter housing
   - Continuously connect to the termination point
   - Be connected to a good earth ground at the power supply end

![Figure 5-3: Wiring](image)

- A. Minimize distance
- B. Trim shield and insulate
- C. Ground for transient protection
- D. Shield connected to power supply ground
- E. Insulate shield

3. Replace the housing cover.
   It is recommended the cover be tightened until there is no gap between the cover and the housing.
4. Plug and seal unused conduit connections.

5.2 Power supply for a 4-20 mA HART

The transmitter operates on 10.5-4.2 Vdc at the terminal of the transmitter. The dc power supply should provide power with less than two percent ripple. Loops with a 250 Ω resistance require a minimum of 16.6 V.

Note
The transmitter must have a minimum of 250 Ω to communicate with a Field Communicator. If you are using a single power supply to power more than one Rosemount 3051 Transmitter, make sure the power supply used
and the circuitry common to the transmitters do not have more than 20 Ω of impedance at 1200 Hz.

Figure 5-4: Load Limitation

Maximum loop resistance = 43.5 x (power supply voltage - 10.5)

A. Load (Ωs)
B. Voltage (Vdc)
C. Operating region

The total resistance load is the sum of the resistance of the signal leads and the load resistance of the controller, indicator, I.S. barriers, and related pieces. If you use intrinsic safety barriers, include the resistance and voltage drop.

5.3 Power supply for 1-5 Vdc HART Low Power

Low power transmitters operate on 6–12 Vdc. The dc power supply should provide power with less than two percent ripple. The $V_{out}$ load should be 100 kW or greater.
6 Verify configuration

6.1 Handheld communicator user interface

The Traditional Interface - Device Revision 3 and DD Revision 2 Fast Key sequence can be found on page 12.

**Figure 6-1: Traditional Interface - Device Revision 3 and DD Revision 2**

![Traditional Interface](image)

The Device Dashboard - Device Revision 3 and DD Revision 6 Fast Key sequence can be found on Table 6-2.

**Figure 6-2: Device Dashboard - Device Revision 3 and DD Revision 6**

![Device Dashboard](image)

**Note**
A check (✓) indicates the basic configuration parameters. At minimum, these parameters should be verified as part of the configuration and startup procedure.

7 Trim the transmitter

Note
Transmitters are shipped fully calibrated per request or by the factory default of full scale (span = upper range limit).

7.1 Zero trim

A zero trim is a single-point adjustment used for compensating mounting position effects. When performing a zero trim, ensure the equalizing valve is open and all wet legs are filled to the correct level.

There are two methods to compensate for mounting effects:

• Zero trim using the handheld communicator
• Using the transmitter zero adjustment buttons

7.1.1 Zero trim using the handheld communicator

If zero offset is within 3% of URL, follow the instructions below. This zero trim will affect the 4–20 mA value, the HART PV, and the display value.

Procedure

1. Equalize or vent the transmitter and connect Field Communicator.
2. At the menu, input the HART Fast Key sequence (refer to Table 6-1 or Table 6-2).
3. Follow the commands to perform a zero trim.

7.1.2 Using the transmitter zero adjustment buttons

Using the transmitter zero adjustment buttons, the lower range value (LRV) will be set to the pressure applied to the transmitter. This adjustment will affect the 4–20 mA value only. Perform the following steps to perform a rerange using the zero adjustment buttons.

Procedure

1. Loosen the certifications label screw and slide the label to expose the zero adjustment buttons.
2. Set the 4 mA point by pressing the zero button for two seconds.
   Verify the output is 4 mA.
   The optional LCD display will show ZERO PASS.
Figure 7-1: Zero Adjustment Buttons

A. Zero adjustment buttons
8 Safety Instrumented Systems (SIS)

The following section applies to Rosemount 3051C Transmitters used in SIS applications.

8.1 Installation

No special installation is required in addition to the standard installation practices outlined in this document. Always ensure a proper seal by installing the electronics housing cover(s) so that metal contacts metal.

The loop must be designed so the terminal voltage does not drop below 10.5 Vdc when the transmitter output is 22.5 mA.

Position the security switch to the ON position to prevent accidental or deliberate change of configuration data during normal operation.

8.2 Configuration

Use any HART-compliant master to communicate with and verify configuration of the Rosemount 3051.

User-selected damping will affect the transmitters ability to respond to changes in the applied process. The damping value + response time must not exceed the loop requirements.

1. Transmitter output is not safety-rated during the following: configuration changes, multidrop, loop test. Alternative means should be used to ensure process safety during transmitter configuration and maintenance activities.

2. DCS or safety logic solver must be configured to match transmitter configuration. Figure 8-1 identifies the two alarm levels available and their operation values. Position the alarm switch to the required HI or LO alarm position.
8.3 Operation and maintenance

8.3.1 Proof test and inspection

The following proof tests are recommended. Proof test results and corrective actions taken must be documented at Emerson.com/Rosemount/Report-A-Failure in the event that an error is found in the safety functionality.

Use the Fast Key sequences in Table 6-1 or Table 6-2 to perform a loop test, analog output trim, or sensor trim. See the Rosemount 3051 Reference Manual for additional information.

Proof test 1\(^{(4)}\)

This proof test will detect 59.6 percent of DU failures not detected by the Rosemount 3051 automatic diagnostics.

**Procedure**

1. Execute the Master Reset command to initiate start-up diagnostics.
2. Enter the milliampere value representing a high alarm state.

\(^{(4)}\) *This test will detect approximately 94.6% of possible DU failures in the transmitter.*
3. Check the reference meter to verify the mA output corresponds to the entered value.

4. Enter the milliampere value representing a low alarm state.

5. Check the reference meter to verify the mA output corresponds to the entered value.

Proof test 2\(^{(5)}\)

This proof test, when combined with the five-year proof-test, will detect 94.6 percent of DU failures not detected by the Rosemount 3051 automatic diagnostics.

Procedure

1. Execute the Master Reset command to initiate start-up diagnostics.

2. Perform a minimum two point sensor calibration check using the 4–20 mA range points as the calibration points.

3. Check the reference mA meter to verify the mA output corresponds to the pressure input value.

4. If necessary, use one of the trim procedures available in the Rosemount 3051 Reference Manual to calibrate.

Note

The user determines the proof-test requirements for impulse piping.

**Visual inspection**

Not required.

**Special tools**

Not required.

**Product repair**

All failures detected by the transmitter diagnostics or by the proof-test must be reported. Feedback can be submitted electronically at Emerson.com/Rosemount/Report-A-Failure

The Rosemount 3051 is repairable by major component replacement. Follow the instructions in the Rosemount 3051 Reference Manual for additional information.

\(^{(5)}\) This test will detect approximately 94.6% of possible DU failures in the transmitter.
8.4 Reference

Specifications
The Rosemount 3051 must be operated in accordance to the functional and performance specifications provided in the Rosemount 3051 Reference Manual.

Failure rate data
The FMEDA report includes failure rates and common cause Beta factor estimates. This report is available at Emerson.com/Rosemount.

Rosemount 3051 safety failure values

- **Safety accuracy:** 0.065 percent
- **Safety response time:** 100 msec

Product life
50 years – based on worst case component wear-out mechanisms – not based on wear-out process wetted materials
9 Product certifications

Rev 2.9

9.1 European directive information

A copy of the EU Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EU Declaration of Conformity can be found at Emerson.com/Rosemount.

9.2 Ordinary location certification

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

Special Conditions for Safe Use (X):

1. This device contains a thin wall diaphragm less than 1 mm thick that forms a boundary between Category 1 (process connection) and Category 2 (all other parts of the equipment). The model code and datasheet are to be consulted for details of the diaphragm material. During installation, maintenance, and use, the environmental conditions to which the diaphragm will be subjected shall be taken into account. The manufacturer’s instructions for installation and maintenance shall be followed in detail to assure safety during its expected lifetime.

2. Flameproof joints are not intended for repair.

3. Non-standard paint options may cause risk from electrostatic discharge. Avoid installations that could cause electrostatic build-up on painted surfaces and only clean the painted surfaces with a damp cloth. If paint is ordered through a special option code, contact the manufacturer for more information.
4. Some variants of the equipment have reduced markings on the nameplate. Refer to the Certificate for full equipment marking.

一、产品安全使用特殊条件
证书编号后缀“X”表明产品具有安全使用特殊条件：涉及隔爆接合面的维修须联系产品制造商。
1. 涉及隔爆接合面的维修须联系产品制造商。
2. 产品使用厚度小于1mm的隔膜作为0区（过程连接）和1区（产品其他部分）的隔离，安装和维护时需严格遵守制造商提供的说明书，以确保安全性。
3. 产品外部涂层可能产生静电危险，使用时须防止产生静电火花，只能用湿布清理。

二、产品使用注意事项
1. 用于爆炸性气体环境中，产品温度组别和使用环境温度之间的关系为：(变送器)

<table>
<thead>
<tr>
<th>温度组别</th>
<th>环境温度</th>
<th>过程温度</th>
</tr>
</thead>
<tbody>
<tr>
<td>T6</td>

<td>-60 °C ~ +80 °C</td>
<td>-60 °C ~ +80 °C</td>
</tr>
<tr>
<td>T4</td>
<td>-60 °C ~ +80 °C</td>
<td>-60 °C ~ +120 °C</td>
</tr>
</tbody>
</table>

用于爆炸性气体环境中，产品温度组别和使用环境温度之间的关系为：(流量计)

<table>
<thead>
<tr>
<th>温度组别</th>
<th>使用环境温度</th>
</tr>
</thead>
<tbody>
<tr>
<td>T6</td>
<td>-50 °C ~ +65 °C</td>
</tr>
<tr>
<td>T5</td>
<td>-50 °C ~ +80 °C</td>
</tr>
</tbody>
</table>

2. 产品外壳设有接地端子，用户在使用时应可靠接地; -20 °C ≤ T_a ≤ +85 °C
3. 产品外壳设有接地端子，用户在使用时应可靠接地
4. 安装现场不存在对产品外壳有腐蚀作用的有害气体。

5. 现场安装时，电缆引入口须选用国家指定的防爆检验机构按检验认可、具有 Ex dIIC，Ex tD A20 IP66 防爆等级的电缆引入装置或堵封件，冗余电缆引入口须用堵封件有效密封。

6. 用于爆炸性气体环境中，现场安装、使用和维护必须严格遵守“断电后开盖！”的警告语。用于爆炸性粉尘环境中，现场安装、使用和维护必须严格遵守“爆炸性粉尘场所严禁开盖！”的警告语。

7. 用于爆炸性粉尘环境中，产品外壳表面需保持清洁，以防粉尘堆积，但严禁用压缩空气吹扫。

8. 用户不得自行更换该产品的零部件，应会同产品制造商共同解决运行中出现的故障，以杜绝损坏现象的发生。

9.7.2 I3 China Intrinsic Safety

**Certificate**  GYJ13.1362X; GYJ15.1367X [Flow meters]

**Standards**  GB3836.1-2010, GB3836.4-2010, GB3836.20-2010, GB12476.1-2000

**Markings**  3051 Series: Ex ia IIC T4/T5 Ga, DIP A20 T A 80 °C IP66  
3051 CF Series: Ex ia IIC T4/T5 Ga

- **产品安全使用特殊条件：**
  证书编号后缀“X”表明产品具有安全使用特殊条件：
  1. 产品（选用铝合金外壳）外壳含有轻金属，用于 0 区时需注意防止由于冲击或摩擦产生的点燃危险。
  2. 当选择 T1 瞬态抑制端子时，此设备不能承受 GB3836.4-2010 标准中第 6.3.12 条规定的 500V 交流有效值试验电压的介电强度试验。
  3. Transmitter output 为 X 时，需使用由厂家提供的型号为 701PG 的 Smart Power Green Power Module 电池。
  4. 产品外壳含有非金属部件，使用时须防止产生静电火花，只能用湿布清理。

- **产品使用注意事项：**
1. 产品使用环境温度范围：

<table>
<thead>
<tr>
<th>气体/粉尘</th>
<th>Transmitter output</th>
<th>温度组别</th>
<th>环境温度范围</th>
</tr>
</thead>
<tbody>
<tr>
<td>气体</td>
<td>A, M</td>
<td>T5</td>
<td>-60 °C ~ +40 °C</td>
</tr>
<tr>
<td>气体</td>
<td>A, M</td>
<td>T4</td>
<td>-60 °C ~ +70 °C</td>
</tr>
<tr>
<td>气体</td>
<td>F, W</td>
<td>T4</td>
<td>-60 °C ~ +60 °C</td>
</tr>
<tr>
<td>气体</td>
<td>X</td>
<td>T4</td>
<td>-40 °C ~ +70 °C</td>
</tr>
<tr>
<td>粉尘</td>
<td>A, F, W</td>
<td>T80 °C</td>
<td>-20 °C ~ +40 °C</td>
</tr>
</tbody>
</table>

2. 本安电气参数：

<table>
<thead>
<tr>
<th>Transmitter output</th>
<th>最高输入电压 $U_i$ (V)</th>
<th>最大输入电流 $I_i$ (mA)</th>
<th>最大输入功率 $P_i$ (W)</th>
<th>最大内部等效参数 $C_i$ (nF)</th>
<th>$L_i$ (H)</th>
</tr>
</thead>
<tbody>
<tr>
<td>A, M</td>
<td>30</td>
<td>200</td>

<td>30</td>
<td>300</td>
<td>1.3</td>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>F, W (FISCO)</td>
<td>17.5</td>
<td>380</td>
<td>5.32</td>
<td>5</td>
<td>10</td>
</tr>
</tbody>
</table>

注：Transmitter Output 为 F、W（FISCO）时，本安电气参数符合 GB3836.19-2010 对 FISCO 现场仪表的参数要求。

3. 该产品必须与已通过防爆认证的关联设备配套共同组成本安防爆系统方可使用于爆炸性气体环境。其系统接线必须同时遵守本产品和所配关联设备的使用说明书要求，接线端子不得接错。

4. 该产品与关联设备的连接电缆应为带绝缘护套的屏蔽电缆，其屏蔽层应在安全场所接地。

5. 对于爆炸性粉尘环境，最大输入电压为：

<table>
<thead>
<tr>
<th>Transmitter output</th>
<th>最高输入电压</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>55 V</td>
</tr>
<tr>
<td>F, W</td>
<td>40 V</td>
</tr>
</tbody>
</table>

6. 安装现场应不存在对产品外壳有腐蚀作用的有害气体。

7. 现场安装时，电缆引入口须选用国家指定的防爆检验机构按检验认可、具有 DIP A20 IP66 防爆等级的电缆引入装置、接头或堵封件，冗余电缆引入口须用堵封件有效密封。
8. 对于爆炸性粉尘环境，现场安装、使用和维护必须严格遵守“爆炸性粉尘场所严禁开盖！”的警告语。

9. 用户不得自行更换该产品的零部件，应会同产品制造商共同解决运行中出现的故障，以杜绝损坏现象的发生。

10. 安装现场确认无可燃性粉尘存在时方可维修。

9.7.3 N3 China Type n

Special Conditions for Safe Use (X):

1. When the thread adapter or blanking plug is used with an enclosure in type of protection increased safety “e,” the entry thread shall be suitably sealed in order to maintain the ingress protection rating (IP) of the enclosure.

2. The blanking plug shall not be used with an adapter.

3. Blanking plug and threaded adapter shall be either NPT or metric thread forms. G½ thread forms are only acceptable for existing (legacy) equipment installations.

9.13 Additional certifications

9.13.1 SBS American Bureau of Shipping (ABS) Type Approval

Certificate 18-HS1814795-PDA

Intended use Marine & Offshore Applications – Measurement of either gauge or absolute pressure for liquid, gas and vapor.

9.13.2 SBV Bureau Veritas (BV) Type Approval

Certificate 23155

Requirements Bureau Veritas rules for the classification of steel ships

Application Class notations: AUT-UMS, AUT-CCS, AUT-PORT and AUT-IMS; Pressure transmitter type 3051 cannot be installed on diesel engines

9.13.3 SDN Det Norske Veritas (DNV) Type Approval

Certificate TAA000004F
**Intended Use**
DNV GL rules for classification - ships and offshore units

**Application**

**Certificate** AG-0226; AG-0454; AG-0477
9.14 EU Declaration of Conformity

EMERSON

EU Declaration of Conformity
No: RMD 1017 Rev. AD

We,

Rosemount, Inc.
8200 Market Boulevard
Chanhassen, MN 55317-9685
USA

declare under our sole responsibility that the product,

Rosemount 3051 Pressure Transmitters

manufactured by:

Rosemount, Inc.
8200 Market Boulevard
Chanhassen, MN 55317-9685
USA

to which this declaration relates, is in conformity with the provisions of the European Union Directives, including the latest amendments, as shown in the attached schedule.

Assumption of conformity is based on the application of the harmonized standards and, when applicable or required, a European Union notified body certification, as shown in the attached schedule.

__

This table is proposed in accordance with the provision of GB/T 26572.

1. The table above lists substance concentrations in all homogeneous materials for this part to be below the limit requirement of GB/T 26572.

2. X Indicate that hazardous substances contained in at least one of the homogeneous materials used for this part to be above the limit requirement of GB/T 26572.
