Rosemount™ 3051 Pressure Transmitter and Rosemount 3051CF Series Flowmeter
with 4-20 mA HART® and 1-5 Vdc Low Power Protocol
NOTICE
This guide provides basic guidelines for Rosemount 3051 Transmitters. It does not provide instructions for configuration, diagnostics, maintenance, service, troubleshooting, Explosion-Proof, Flame-Proof, or intrinsically safe (I.S.) installations. Refer to the Rosemount 3051 Reference Manual for more instruction. This manual is also available electronically EmersonProcess.com/Rosemount.

WARNING
Explosions could result in death or serious injury.
Installation of this transmitter in an explosive environment must be in accordance with the appropriate local, national, and international standards, codes, and practices. Review the approvals section of the Rosemount 3051 Reference Manual for any restrictions associated with a safe installation.
- Before connecting a HART-based communicator in an explosive atmosphere, make sure the instruments in the loop are installed in accordance with intrinsically safe or non-incendive field wiring practices.
- In an Explosion-Proof/Flame-Proof installation, do not remove the transmitter covers when power is applied to the unit.

Process leaks may cause harm or result in death.
- To avoid process leaks, only use the o-ring designed to seal with the corresponding flange adapter.

Electrical shock can result in death or serious injury.
- Avoid contact with the leads and the terminals. High voltage that may be present on leads can cause electrical shock.

Conduit/cable entries
- Unless marked, the conduit/cable entries in the transmitter housing use a 1/2–14 NPT thread form. Entries marked “M20” are M20 x 1.5 thread form. On devices with multiple conduit entries, all entries will have the same thread form. Only use plugs, adapters, glands, or conduit with a compatible thread form when closing these entries.
- When installing in a hazardous location, use only appropriately listed or Ex certified plugs, adapters, or glands in cable/conduit entries.

1.0 Mount the transmitter

1.1 Liquid flow applications
   1. Place taps to the side of the line.
   2. Mount beside or below the taps.
   3. Mount the transmitter so the drain/vent valves are oriented upward.

1.2 Gas flow applications
   1. Place taps in the top or side of the line.
   2. Mount beside or above the taps.

1.3 Steam flow applications
   1. Place taps to the side of the line.
   2. Mount beside or below the taps.
   3. Fill impulse lines with water.

- **Rosemount 3051T**
- **Rosemount 3051H**

1. Panel bolts are customer supplied.
1.4 Bolting considerations

If the transmitter installation requires assembly of the process flanges, manifolds, or flange adapters, follow these assembly guidelines to ensure a tight seal for optimal performance characteristics of the transmitters. Use only bolts supplied with the transmitter or sold by Emerson™ as spare parts. Figure 2 illustrates common transmitter assemblies with the bolt length required for proper transmitter assembly.

**Figure 2. Common Transmitter Assemblies**

A. Transmitter with coplanar flange  
B. Transmitter with coplanar flange and optional flange adapters  
C. Transmitter with traditional flange and optional flange adapters  
D. Transmitter with coplanar flange and optional manifold and flange adapters

Bolts are typically carbon steel or stainless steel. Confirm the material by viewing the markings on the head of the bolt and referencing Table 1. If bolt material is not shown in Table 1, contact the local Emerson Process Management representative for more information.

Use the following bolt installation procedure:

1. Carbon steel bolts do not require lubrication and the stainless steel bolts are coated with a lubricant to ease installation. However, no additional lubricant should be applied when installing either type of bolt.
2. Finger-tighten the bolts.
3. Torque the bolts to the initial torque value using a crossing pattern. See Table 1 for initial torque value.
4. Torque the bolts to the final torque value using the same crossing pattern. See Table 1 for final torque value.
5. Verify that the flange bolts are protruding through the isolator plate before applying pressure.

#### 1.5 O-rings with flange adapters

**WARNING**

Failure to install proper flange adapter O-rings may cause process leaks, which can result in death or serious injury. The two flange adapters are distinguished by unique O-ring grooves. Only use the O-ring that is designed for its specific flange adapter, as shown below:

![Flange Adapter Diagram](image3)

A. Flange adaptor  
B. O-ring  
C. PTFE based (profile is square)  
D. Elastomer (profile is round)

Whenever the flanges or adapters are removed, visually inspect the O-rings. Replace them if there are any signs of damage, such as nicks or cuts. If you replace the O-rings, re-torque the flange bolts and alignment screws after installation to compensate for seating of the PTFE O-rings.

#### 1.6 Environmental seal for housing

Thread sealing (PTFE) tape or paste on male threads of conduit is required to provide a water/dust tight conduit seal and meets requirements of NEMA® Type 4X, IP66, and IP68. Consult factory if other Ingress Protection ratings are required.

For M20 threads, install conduit plugs to full thread engagement or until mechanical resistance is met.
1.7 In-line gage transmitter orientation

The low side pressure port (atmospheric reference) on the in-line gage transmitter is located in the neck of the transmitter, behind the housing. The vent path is 360° around the transmitter between the housing and sensor. (See Figure 3.)

Keep the vent path free of any obstruction, including but not limited to paint, dust, and lubrication by mounting the transmitter so that the process can drain away.

Figure 3. In-line Gage Low Side Pressure Port

A. Low side pressure port (atmospheric reference)

2.0 Consider housing rotation

To improve field access to wiring or to better view the optional LCD display:
1. Loosen the housing rotation set screw.
2. First rotate the housing clockwise to the desired location. If the desired location cannot be achieved due to thread limit, rotate the housing counter clockwise to the desired location (up to 360° from thread limit).
3. Retighten the housing rotation set screw.

Figure 4. Housing Rotation Set Screw

A. Housing rotation set screw (5/64-in.)
3.0 Set the jumpers

If alarm and security jumpers are not installed, the transmitter will operate normally with the default alarm condition alarm high and the security off.

1. If the transmitter is installed, secure the loop, and remove power.
2. Remove the housing cover opposite the field terminal side. Do not remove the instrument cover in explosive atmospheres when the circuit is live.
3. Reposition the jumper. Avoid contact with the leads and the terminals. See Figure 5 for the location of the jumper and the ON and OFF positions.
4. Reattach the transmitter cover. The cover must be fully engaged to comply with explosion-proof requirements.

---

4.0 Connect the wiring and power up

Use the following steps to wire the transmitter:

1. Remove the housing cover on the field terminals side.
2. Connect the positive lead to the “+” terminal (PWR/COMM) and the negative lead to the “−” terminal.
3. Ensure full contact with terminal block screw and washer. When using a direct wiring method, wrap wire clockwise to ensure it is in place when tightening the terminal block screw.

---

**Note**

The use of a pin or a ferrule wire terminal is not recommended as the connection may be more susceptible to loosening over time or under vibration.

4. Ensure proper grounding. It is important that the instrument cable shield:
   - Be trimmed close and insulated from touching the transmitter housing
   - Be connected to the next shield if cable is routed through a junction box
   - Be connected to a good earth ground at the power supply end
**Note**
Do not connect the powered signal wiring to the test terminals. Power could damage the test diode in the test connection. Shielded twisted pair cable should be used for best results. Use 24 AWG or larger wire and do not exceed 5,000 feet (1500 meters).

5. Plug and seal unused conduit connections.
6. If applicable, install wiring with a drip loop. Arrange the drip loop so the bottom is lower than the conduit connections and the transmitter housing.
7. Replace the housing cover.

**Figure 6** shows wiring connections necessary to power a Rosemount 3051 and enable communications with a hand-held Field Communicator. For low-power transmitters, refer to the Rosemount 3051 Reference Manual.

**Figure 6. Transmitter Wiring Diagrams (4–20 mA)**

A. Current meter
B. $R_L \geq 250\Omega$
C. 24 Vdc supply

**Figure 7. Low Power Transmitter Wiring**

A. Voltmeter
B. 6–12 Vdc supply
Note
Installation of the transient protection terminal block does not provide transient protection unless the Rosemount 3051 case is properly grounded.

4.1 Signal wiring grounding

Do not run signal wiring in conduit or open trays with power wiring, or near heavy electrical equipment. Grounding terminations are provided on the outside of the electronics housing and inside the terminal compartment. These grounds are used when transient protect terminal blocks are installed or to fulfill local regulations. See Step 2 for more information on how the cable shield should be grounded.

1. Remove the field terminals housing cover.
2. Connect the wiring pair and ground as indicated in Figure 8. The cable shield should:
   - Be trimmed close and insulated from touching the transmitter housing
   - Continuously connect to the termination point
   - Be connected to a good earth ground at the power supply end

Figure 8. Wiring

3. Replace the housing cover. It is recommended that the cover be tightened until there is no gap between the cover and the housing.
4. Plug and seal unused conduit connections.

4.2 Power supply for 4–20 mA HART

Transmitter operates on 10.5–42.4 Vdc. The dc power supply should provide power with less than two percent ripple.
The total resistance load is the sum of the resistance of the signal leads and the load resistance of the controller, indicator, and related pieces. Note that the resistance of intrinsic safety barriers, if used, must be included.

4.3 Power supply for 1–5 Vdc HART Low Power

Low power transmitters operate on 6–12 Vdc. The dc power supply should provide power with less than two percent ripple. The $V_{\text{out}}$ load should be 100 kW or greater.

5.0 Verify configuration

5.1 Field Communicator user interface

The Traditional Interface - Device Revision 3 and DD Revision 2 Fast Key sequence can be found on page 12.

![Figure 10. Traditional Interface - Device Revision 3 and DD Revision 2](image-url)

The Device Dashboard - Device Revision 3 and DD Revision 6 Fast Key sequence can be found on page 12.
Figure 11. Device Dashboard - Device Revision 3 and DD Revision 6

Note
A check (✓) indicates the basic configuration parameters. At minimum, these parameters should be verified as part of the configuration and startup procedure.

Quick Start Guide

6.0 Trim the transmitter

Note
Transmitters are shipped fully calibrated per request or by the factory default of full scale (span = upper range limit).

6.1 Zero trim

A zero trim is a single-point adjustment used for compensating mounting position effects. When performing a zero trim, ensure the equalizing valve is open and all wet legs are filled to the correct level.

There are two methods to compensate for mounting effects:

- Field Communicator
- Transmitter zero adjustment buttons

Select the appropriate method and follow instructions below:

**Using the Field Communicator**

If zero offset is within 3% of URL, follow the Using the Field Communicator instructions below. This zero trim will affect the 4–20 mA value, the HART PV, and the display value.

1. Equalize or vent the transmitter and connect Field Communicator.
2. At the menu, input the HART Fast Key sequence (refer to Table 2 or Table 3).
3. Follow the commands to perform a zero trim.

**Using the transmitter zero adjustment buttons**

Using the transmitter zero adjustment buttons, the lower range value (LRV) will be set to the pressure applied to the transmitter. This adjustment will affect the 4–20 mA value only. Perform the following steps to perform a rerange using the zero adjustment buttons.
1. Loosen the certifications label screw and slide the label to expose the zero adjustment buttons.
2. Set the 4 mA point by pressing the **Zero** button for two seconds. Verify the output is 4 mA. The optional LCD display will show ZERO PASS.

**Figure 12. Zero Adjustment Buttons**

![Zero adjustment buttons](image)

A. Zero adjustment buttons

### 7.0 Safety Instrumented Systems (SIS)

The following section applies to Rosemount 3051C Transmitters used in SIS applications.

#### 7.1 Installation

No special installation is required in addition to the standard installation practices outlined in this document. Always ensure a proper seal by installing the electronics housing cover(s) so that metal contacts metal.

The loop must be designed so the terminal voltage does not drop below 10.5 Vdc when the transmitter output is 22.5 mA.

Position the security switch to the **ON** position to prevent accidental or deliberate change of configuration data during normal operation.

#### 7.2 Configuration

Use any HART-compliant master to communicate with and verify configuration of the Rosemount 3051.

User-selected damping will affect the transmitters ability to respond to changes in the applied process. The **damping value + response time** must not exceed the loop requirements.

**Note**

1. Transmitter output is not safety-rated during the following: configuration changes, multidrop, loop test. Alternative means should be used to ensure process safety during transmitter configuration and maintenance activities.
2. DCS or safety logic solver must be configured to match transmitter configuration. **Figure 13** identifies the two alarm levels available and their operation values. Position the alarm switch to the required HI or LO alarm position.
7.3 Operation and maintenance

Proof test and inspection

The following proof tests are recommended. Proof test results and corrective actions taken must be documented at EmersonProcess.com/Rosemount/Report-A-Failure in the event that an error is found in the safety functionality.

Use the Fast Key sequences in Table 2 on page 12 or Table 3 on page 13 to perform a loop test, analog output trim, or sensor trim. See the Rosemount 3051 Reference Manual for additional information.

Proof test 1(1)

This proof test will detect 59.6% of DU failures not detected by the Rosemount 3051 automatic diagnostics.

1. Execute the Master Reset command to initiate start-up diagnostics.
2. Enter the milliampere value representing a high alarm state
3. Check the reference meter to verify the mA output corresponds to the entered value.
4. Enter the milliampere value representing a low alarm state
5. Check the reference meter to verify the mA output corresponds to the entered value.

---

1. This test will detect approximately 59.6% of possible DU failures in the transmitter.
Proof test 2(1)
This proof test, when combined with the five-year proof-test, will detect 94.6% of DU failures not detected by the Rosemount 3051 automatic diagnostics.

1. Execute the Master Reset command to initiate start-up diagnostics.
2. Perform a minimum two point sensor calibration check using the 4–20 mA range points as the calibration points.
3. Check the reference mA meter to verify the mA output corresponds to the pressure input value.
4. If necessary, use one of the “Trim” procedures available in the Rosemount 3051 Reference Manual to calibrate.

Note
The user determines the proof-test requirements for impulse piping.

Visual inspection
Not required.

Special tools
Not required.

Product repair
All failures detected by the transmitter diagnostics or by the proof-test must be reported. Feedback can be submitted electronically at EmersonProcess.com/Rosemount/Report-A-Failure.

The Rosemount 3051 is repairable by major component replacement. Follow the instructions in the Rosemount 3051 Reference Manual for additional information.

7.4 Reference

Specifications
The Rosemount 3051 must be operated in accordance to the functional and performance specifications provided in the Rosemount 3051 Reference Manual.

Failure rate data
The FMEDA report includes failure rates and common cause Beta factor estimates. This report is available at EmersonProcess.com/Rosemount.

Rosemount 3051 safety failure values
Safety accuracy: 0.065%
Safety response time: 100 msec

Product life
50 years – based on worst case component wear-out mechanisms – not based on wear-out process wetted materials

---

1. This test will detect approximately 94.6% of possible DU failures in the transmitter.
Quick Start Guide

8.0 Product Certifications
Rev 1.4

8.1 European Directive Information
A copy of the EU Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EU Declaration of Conformity can be found at EmersonProcess.com/Rosemount.

8.2 Ordinary Location Certification
As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

8.3 North America

E5 USA Explosionproof (XP) and Dust-Ignitionproof (DIP)

Quick Start Guide

Special Conditions for Safe Use (X):
1. If the apparatus is fitted with optional 90 V transient suppressor, it is not capable of withstanding the 500 V insulation test required by IEC60079-11. This must be taken into account when installing the apparatus.
2. The enclosure may be made of aluminum alloy and given a protective polyurethane paint finish; however, care should be taken to protect it from impact or abrasion if located in Zone 0.

IECEx Mining (Special A0259)
Certificate: IECEx TSA 14.0001X
Markings: Ex ia I Ma (–60 °C ≤ T_a ≤ +70 °C)

Special Conditions for Safe Use (X):
1. If the apparatus is fitted with optional 90 V transient suppressor, it is not capable of withstanding the 500 V insulation test required by IEC60079-11. This must be taken into account when installing the apparatus.

IECEx Type n
Certificate: IECEx BAS 09.0077X
Markings: Ex nA IIC T5 Gc (–40 °C ≤ T_a ≤ +70 °C)

Special Conditions for Safe Use (X):
1. The apparatus is not capable of withstanding the 500 V insulation test required by IEC60079-15. This must be taken into account when installing the apparatus.

8.6 Brazil

E2 INMETRO Flameproof
Certificate: UL-BR 13.0643X
Standards: ABNT NBR IEC60079-0:2008 + Errata 1:2011,
ABNT NBR IEC60079-1:2009 + Errata 1:2011,
Markings: Ex d IIC T6/T5 Ga/Gb, T6(−50 °C ≤ T_a ≤ +65 °C), T5(−50 °C ≤ T_a ≤ +80 °C)

Special Conditions for Safe Use (X):
1. This device contains a thin wall diaphragm. Installation, maintenance and use shall take into account the environmental conditions to which the diaphragm will be subjected. The manufacturer’s instructions for installation and maintenance shall be followed in detail to assure safety during its expected lifetime.

Special Conditions for Safe Use (X):
1. If the equipment is fitted with an optional 90 V transient suppressor, it is not capable of withstanding the 500 V insulation test required by ABNT NBR IEC 60079-11. This must be taken into account when installing the equipment.

2. The enclosure may be made of aluminum alloy and given a protective polyurethane paint finish; however, care should be taken to protect it from impact or abrasion if located in Zone 0.
8.7 China

E3 China Flameproof
Certificate: CYJ14.1041X; CYJ15.1368X [Flowmeters]
Standards: GB12476-2000; GB3836.1-2010, GB3836.2-2010, GB3836.20-2010
Markings: Ex d IIC T6/T5 Ga/Gb, T6(−50 °C ≤ T_a ≤ +65 °C), T5(−50 °C ≤ T_a ≤ +80 °C)

Special Conditions for Safe Use (X):
1. The relation between ambient temperature range and temperature class is as follows:

<table>
<thead>
<tr>
<th>T_a</th>
<th>Temperature class</th>
</tr>
</thead>
<tbody>
<tr>
<td>−50 °C ~ +80 °C</td>
<td>T5</td>
</tr>
<tr>
<td>−50 °C ~ +65 °C</td>
<td>T6</td>
</tr>
</tbody>
</table>

When used in a combustible dust environment, the maximum ambient temperature is 80 °C.
2. The earth connection facility in the enclosure should be connected reliably.
3. Cable entry certified by notified body with type of protection Ex d IIC in accordance with GB3836.1-2000 and GB3836.2-2000, should be applied when installed in a hazardous location. When used in combustible dust environment, cable entry in accordance with IP66 or higher level should be applied.
4. Obey the warning “Keep tight when the circuit is alive.”
5. End users are not permitted to change any internal components.

I3 China Intrinsic Safety
Certificate: CYJ13.1362X; CYJ15.1367X [Flowmeters]
Standards: GB3836.1-2010, GB3836.4-2010, GB3836.20-2010, GB12476.1-2000
Markings: Ex ia IIC Ga T4/T5

Special Conditions for Safe Use (X):
1. Symbol “X” is used to denote specific conditions of use:
   a. If the apparatus is fitted with an optional 90 V transient suppressor, it is not capable of withstanding the 500 V insulation test for 1 minute. This must be taken into account when installing the apparatus.
   b. The enclosure may be made of aluminum alloy and given a protective polyurethane paint finish; however, care should be taken to protect it from impact or abrasion if located in Zone 0.
2. The relation between T code and ambient temperature range is:

<table>
<thead>
<tr>
<th>Model</th>
<th>T code</th>
<th>Temperature range</th>
</tr>
</thead>
<tbody>
<tr>
<td>HART</td>
<td>T5</td>
<td>−60 °C ≤ T_a ≤ +40 °C</td>

<td>300 mA</td>
<td>380 mA</td>
</tr>
<tr>
<td>Power $P_i$</td>
<td>0.9 W</td>
<td>1.3 W</td>
<td>5.32 W</td>
</tr>
<tr>
<td>Capacitance $C_i$</td>
<td>0.012 μF</td>
<td>0 μF</td>
<td>&lt;5 nF</td>
</tr>
<tr>
<td>Inductance $L_i$</td>
<td>0 mH</td>
<td>0 mH</td>
<td>&lt;10 μH</td>
</tr>
</tbody>
</table>

Note 1: FISCO parameters apply to both Group IIC and IIB.

Note 2: [For Flowmeters] When Rosemount 644 Temperature Transmitter is used, the transmitter should be used with Ex-certified associated apparatus to establish explosion protection system that can be used in explosive gas atmospheres. Wiring and terminals should comply with the instruction manual of both Rosemount 644 and associated apparatus. The cables between Rosemount 644 and associated apparatus should be shielded cables (the cables must have insulated shield). The shielded cable has to be grounded reliably in a non-hazardous area.

4. Transmitters comply with the requirements for FISCO field devices specified in IEC60079-27:2008. For the connection of an intrinsically safe circuit in accordance with FISCO Model, FISCO parameters are listed in the table above.

5. The product should be used with Ex-certified associated apparatus to establish explosion protection system that can be used in explosive gas atmospheres. Wiring and terminals should comply with the instruction manual of the product and associated apparatus.

6. The cables between this product and associated apparatus should be shielded cables (the cables must have insulated shield). The shielded cable has to be grounded reliably in a non-hazardous area.

7. End users are not permitted to change any intern components but to settle the problem in conjunction with the manufacturer to avoid damage to the product.

N3 China Type n
Certificate: CY|15.1105X
Standards: GB3836.1-2010, GB3836.8-2003
Markings: Ex nA nL IIC T5 Gc (−40 °C ≤ $T_a$ ≤ +70 °C)

Special Condition for Safe Use (X):
1. Symbol “X” is used to denote specific conditions of use: The apparatus is not capable of withstanding the 500 V test to earth for one minute. The must be taken into consideration during installation.

8.8 Japan

E4 Japan Flameproof

Application: Environmental categories ENV1, ENV2, ENV3, and ENV5

**C5** Custody Transfer - Measurement Canada Accuracy Approval
Certificate: AG-0226; AG-0454; AG-0477
Figure 14. Rosemount 3051 Declaration of Conformity

EU Declaration of Conformity
No: RMD 1017 Rev. X

We,

Rosemount, Inc.
8200 Market Boulevard
Chanhassen, MN 55317-9685
USA

declare under our sole responsibility that the product,

Rosemount 3051 Pressure Transmitters

manufactured by,

Rosemount, Inc.
8200 Market Boulevard
Chanhassen, MN 55317-9685
USA

to which this declaration relates, is in conformity with the provisions of the European Union Directives, including the latest amendments, as shown in the attached schedule.

Assumption of conformity is based on the application of the harmonized standards and, when applicable or required, a European Union notified body certification, as shown in the attached schedule.

Kelly Klein
Vice President of Global Quality
