1 About this guide

This guide provides basic guidelines for Rosemount 3051 Pressure Transmitters. It does not provide instructions for configuration, diagnostics, maintenance, service, troubleshooting, Explosion-proof, Flameproof, or intrinsically safe (I.S.) installations. Refer to Rosemount 3051 Reference Manual for more instructions. This guide is also available electronically at Emerson.com/Rosemount.

1.1 Safety messages

⚠️ WARNING

Explosions
Explosions could result in death or serious injury.

Installation of device in an explosive environment must be in accordance with appropriate local, national, and international standards, codes, and practices. Review the approvals section of the Rosemount 3051 Reference Manual for any restrictions associated with a safe installation.

In an explosion-proof/flameproof installation, do not remove the transmitter covers when power is applied to the unit.

Process leaks
Process leaks may cause harm or result in death.

To avoid process leaks, only use the O-ring designed to seal with the corresponding flange adapter.

Electrical shock
Electrical shock can result in death or serious injury.

Avoid contact with the leads and terminals. High voltage that may be present on leads can cause electrical shock.

Conduit/cable entries

Unless otherwise marked, the conduit/cable entries in the housing enclosure use a ½–14 NPT form. Only use plugs, adapters, glands, or conduit with a compatible thread form when closing these entries.

Entries marked M20 are M20 x 1.5 thread form. On devices with multiple conduit entries, all entries will have the same thread form.

When installing in a hazardous location, use only appropriately listed or Ex certified plugs, glands, or adapters in cable/conduit entries.
WARNING

Physical access

Unauthorized personnel may potentially cause significant damage to and/or misconfiguration of end users’ equipment. This could be intentional or unintentional and needs to be protected against.

Physical security is an important part of any security program and fundamental to protecting your system. Restrict physical access by unauthorized personnel to protect end users’ assets. This is true for all systems used within the facility.
2 System readiness

Confirm HART revision capability

- If using HART-based control or asset management systems, confirm the HART capability of those systems prior to transmitter installation. Not all systems are capable of communicating with HART Revision 7. This transmitter can be configured for either HART Revision 5 or 7.

- For instructions on how to change the HART revision of your transmitter, see Switch HART revision mode.

2.1 Confirm correct device driver

- Verify the latest device driver (DD/DTM™) is loaded on your systems to ensure proper communications.

- Download the latest device driver at Emerson.com or Fieldcommgroup.org.

Rosemount 3051 device revisions and drivers

Table 2-1 provides the information necessary to ensure you have the correct device driver and documentation for your device.

Table 2-1: Rosemount 3051 with 4–20 mA HART Protocol Device Revisions and Files

(1) NAMUR revision is located on the hardware tag of the device. Differences in level 3 changes, signified above by xx, represent minor product changes as defined per NE53. Compatibility and functionality are preserved and product can be used interchangeably.

(2) HART software revision can be read using a HART capable configuration tool. Value shown is minimum revision that could correspond to NAMUR revisions.

(3) Device Driver file names use Device and DD Revision, e.g. 10_01. HART Protocol is designed to enable legacy device driver revisions to continue to communicate with new HART devices. To access new functionality, the new Device Driver must be downloaded. It is recommended to download new Device Driver files to ensure full functionality.

(4) HART revision 5 and 7 Selectable, local operator interface (LOI), scaled variable, configurable alarms, and expanded engineering units.

(5) Rosemount 3051G Pressure Transmitter updated electronics hardware design. Intrinsic Safety temperature classification change.
3 Transmitter installation

3.1 Mount the transmitter

3.1.1 Liquid applications

Procedure

1. Place taps to the side of the line.
2. Mount beside or below the taps.
3. Mount the transmitter so that the drain/vent valves are oriented upward.

Figure 3-1: Coplanar and In-line Liquid Applications
3.1.2 Gas applications

**Procedure**

1. Place taps in the top or side of the line.
2. Mount beside or above the taps.

---

**Figure 3-2: Coplanar and In-line Gas Applications**

Coplanar

In-line
### 3.1.3 Steam applications

**Procedure**

1. Place taps to the side of the line.
2. Mount beside or below the taps.
3. Fill impulse lines with water.

---

**Figure 3-3: Coplanar and In-line Steam Applications**

---

**Figure 3-4: Panel and Pipe Mounting**

* 5/6 x 1½ panel bolts are customer supplied
3.1.4 Bolting considerations

If the transmitter installation requires assembly of the process flanges, manifolds, or flange adapters, follow the assembly guidelines to ensure a tight seal for optimal performance characteristics of the transmitters. Use only bolts supplied with the transmitter or sold by Emerson as spare parts. Figure 3-5 illustrates common transmitter assemblies with the bolt length required for proper transmitter assembly.

Figure 3-5: Common Transmitter Assemblies

- A. Transmitter with coplanar flange
- B. Transmitter with coplanar flange and optional flange adapters
- C. Transmitter with traditional flange and optional flange adapters
- D. Transmitter with coplanar flange and optional manifold and flange adapters

Bolts are typically carbon steel (CS) or stainless steel (SST). Confirm the material by viewing the markings on the head of the bolt and referencing Table 3-1. If bolt material is not shown in Table 2-1, contact a local Emerson representative for more information.

Use the following bolt installation procedure:

Procedure

1. CS bolts do not require lubrication and the SST bolts are coated with a lubricant to ease installation. However, no additional lubricant should be applied when installing either type of bolt.
2. Finger-tighten the bolts.
3. Torque the bolts to the initial torque value using a crossing pattern. See Table 3-1 for initial torque value.
4. Torque the bolts to the final torque value using the same crossing pattern. See Table 3-1 for final torque value.

5. Verify that the flange bolts are protruding through the isolator plate before applying pressure.

**Table 3-1: Torque Values for the Flange and Flange Adapter Bolts**

<table>

</tbody>
</table>

3.1.5 **In-line gage transmitter orientation**

The low side pressure port (atmospheric reference) on the in-line gage transmitter is located in the neck of the transmitter, behind the housing. The vent path is 360° around the transmitter between the housing and sensor. (See Figure 3-6)

Keep the vent path free of any obstruction, including but not limited to paint, dust, and lubrication by mounting the transmitter so that the process can drain away.

**Figure 3-6: In-line Gage Low Side Pressure Port**

A. Low side pressure port (atmospheric reference)
3.1.6 Consider housing rotation

To improve field access to wiring or to better view the optional LCD display:

Procedure

1. Loosen the housing rotation set screw using a -in. hex wrench.
2. Turn the housing left or right maximum up to 180° from its original position.(1)

   Note
   Over-rotating can damage the transmitter.

3. Re-tighten the housing rotation set screw to no more than 7 in-lb when desired location is reached.

Figure 3-7: Housing Rotation Set Screw

A. Housing rotation set screw (5/64-in.)

⚠️ CAUTION

Over rotation of housing may cause damage to module communication cable.

3.2 Set the switches

Procedure

1. Set alarm and security switch configuration before installation as shown in Figure 3-8.
2. The alarm switch sets the analog output alarm to high or low.
3. Default alarm is high.
4. The security switch allows (unlocked symbol) or prevents (locked symbol) any configuration of the transmitter.
5. Default security is off (unlocked symbol).

(1) Rosemount 3051D original position aligns with “H” side; Rosemount 3051G original position is the opposite side of bracket holes.
6. If the transmitter is installed, secure the loop, and remove power.

7. Remove the housing cover opposite the field terminal side. Do not remove the instrument cover in explosive atmospheres when the circuit is live.

8. Slide the security and alarm switches into the preferred position using a small screwdriver.

9. Reattach the transmitter cover. The cover must be fully engaged to comply with explosion-proof requirements.

**Figure 3-8: Transmitter Electronics Board**

3.3 Connect the wiring and power up

Figure 3-9: Transmitter Wiring Diagrams (4–20 mA)

A. 24 Vdc supply  
B. $R_L \geq 250$  
C. Current meter (optional)

Shielded twisted pair cable should be used for best results. Use 24 AWG or larger wire that does not exceed 5,000 ft. (1500 m) in length. If applicable, install wiring with a drip loop. Arrange the drip loop so the bottom is lower than the conduit connections and the transmitter housing.

⚠️ CAUTION

Installation of the transient protection terminal block does not provide transient protection unless the Rosemount 3051 case is properly grounded.

Do not run signal wiring in conduit or open trays with power wiring, or near heavy electrical equipment.

Do not connect the powered signal wiring to the test terminals. Power could damage the test diode in the terminal block.

Use the following steps to wire the transmitter:

**Procedure**

1. Remove the housing cover on the FIELD TERMINALS side.
2. Connect the positive lead to the “+” terminal (PWR/COMM) and the negative lead to the “–” terminal.
3. Ground housing to fulfill local grounding regulations.
4. Ensure proper grounding. It is important that the instrument cable shield be:
a) Trimmed close and insulated from touching the transmitter housing
b) Connected to the next shield if cable is routed through a junction box
c) Connected to a good earth ground at the power supply end

5. If transient protection is needed, refer to "Grounding for transient terminal block" for grounding instructions.

6. Plug and seal unused conduit connections.

7. Replace the housing cover.

**Figure 3-10: Wiring**

A. Insulate shield and shield drain wire.
B. Insulate exposed shield drain wire.
C. Connect shield back to the power supply ground.

### 3.3 Grounding for transient terminal block

Ground termination is provided on the outside of the electronics housing and inside the terminal compartment. These grounds are used when the transient protection terminal blocks are installed. It is recommended that 18 AWG or larger wire is used to connect housing ground to earth ground (internal or external).

If the transmitter is currently not wired for power up and communication, follow **Connect the wiring and power up**. When the transmitter is properly wired, refer to **Figure 3-10** for internal and external transient grounding locations.

### 3.4 Verifying configuration

Verify the configuration using any HART-capable configuration tool. Configuration instructions for a Field Communicator are included in this
3.4.1  Verifying configuration with a Field Communicator

A Rosemount 3051 DD must be installed on the Field Communicator to verify configuration. Fast Key sequences for the latest DD are shown in Table 2-2. For Fast Key sequences using legacy DD’s, contact your local Emerson representative.

**Note**
Emerson recommends installing the latest DD to access the complete functionality. Visit Field Communicator for information on updating the DD library.

**Procedure**

Verify device configuration using the Fast Key sequences in Table 3.

a)  A check (√) indicates the basic configuration parameters. At minimum, these parameters should be verified as part of configuration and startup.

b)  A (7) indicates availability only in HART Revision 7 mode.

**Note**
See Figure 3-10 to confirm external button functionality.

### 3.4.2 Verify configuration with LOI

The optional LOI can be used for commissioning the device. The LOI is a two button design with internal and external buttons. The internal buttons are located on the display of the transmitter, while the external buttons are located underneath the top metal tag. To activate the LOI, push any button. LOI button functionality is shown on the bottom corners of the display. See Table 3-2 and Figure 3-12 for button operation and menu information.

Figure 3-12: LOI Menu

3.4.3 Switch HART revision mode

If the HART configuration tool is not capable of communicating with HART Revision 7, the Rosemount 3051 will load a generic menu with limited capability. The following procedures will switch the HART revision mode from the generic menu:

Procedure

**Manual Setup → Device Information → Identification → Message**

a) To change to HART Revision 5, Enter: “HART5” in the Message field

b) To change to HART Revision 7, Enter: “HART7” in the Message field
3.5 Trim the transmitter

Devices are calibrated by the factory. Once installed, it is recommended to perform a zero trim on gage and differential pressure transmitters to eliminate error due to mounting position or static pressure effects. A zero trim can be performed using either a Field Communicator or configuration buttons.

For instructions using AMS Device Manager, see the Rosemount 3051 Reference Manual.

**Note**

When performing a zero trim, ensure that the equalization valve is open and all wet legs are filled to the correct level.

**Procedure**

1. Choose your trim procedure.
   a) Analog zero trim – Sets the analog output to 4 mA.

2. Also referred to as a “rerange,” it sets the lower range value (LRV) equal to the measured pressure.
   a) Digital zero trim – Recalibrates the sensor zero.

3. The display and digital HART output remains unchanged.

4. The LRV is unaffected. The pressure value will be zero (on display and HART output). 4 mA point may not be at zero.

5. This requires that the factory calibrated zero pressure is within a range of 3% of the URV \([0 + 3\% \times \text{URV}]\).
   
   Example: \(\text{URV} = 250 \text{ inH}_2\text{O} \) Applied Zero Pressure = \(+ 0.03 \times 250 \text{ inH}_2\text{O} = + 7.5 \text{ inH}_2\text{O}\) (compared to factory settings) values outside this range will be rejected by the transmitter.

3.5.1 Trimming with a Field Communicator

**Procedure**

1. Connect the Field Communicator. See "Connect the wiring and power up" for instructions.

2. Follow the HART menu to perform the desired zero trim.

**Table 3-3: Zero Trim Fast Keys**

<table>
<thead>
<tr>
<th>Fast Key sequence</th>
<th>Analog zero (Set 4 mA)</th>
<th>Digital zero</th>
</tr>
</thead>
<tbody>
<tr>
<td>3, 4, 2</td>
<td></td>
<td>3, 4, 1, 3</td>
</tr>
</tbody>
</table>
Perform trim with LOI (option M4) for a zero trim.

3. Set the transmitter pressure.
4. See Figure 3-12 for the operating menu.
   a) Perform an analog zero trim by selecting Rerange.
   b) Perform a digital zero trim by selecting Zero Trim.
4 Safety instrumented systems installation

For safety certified installations, refer to Reference Manual for installation procedure and system requirements.

Special Conditions for Safe Use (X):

1. This device contains a thin wall diaphragm less than 1 mm thickness that forms a boundary between Category 1 (process connection) and Category 2 (all other parts of the equipment). The model code and datasheet are to be consulted for details of the diaphragm material. Installation, maintenance and use shall take into account the environmental conditions to which the diaphragm will be subjected. The manufacturer's instructions for installation and maintenance shall be followed in detail to assure safety during its expected lifetime.

2. Flameproof joints are not intended for repair.
3. Non-standard paint options may cause risk from electrostatic discharge. Avoid installations that could cause electrostatic build-up on painted surfaces, and only clean the painted surfaces with a damp cloth. If paint is ordered through a special option code, contact the manufacturer for more information.

4. Some variants of the equipment have reduced markings on the nameplate. Refer to the Certificate for full equipment marking.

5. Appropriate cable, glands and plugs need to be suitable for a temperature of 5°C greater than maximum specified temperature for location where installed.

产品安全使用特殊条件:

证书编号后缀“X”表明产品具有安全使用特殊条件：涉及隔爆接合面的维修须联系产品制造商。

产品使用注意事项:

1. 用于爆炸性气体环境中，产品使用环境温度与温度组别和介质温度的关系为:

<table>
<thead>
<tr>
<th>温度组别</th>
<th>环境温度</th>
<th>过程温度</th>
</tr>
</thead>
<tbody>
<tr>
<td>T6</td>
<td>-50 °C ≤ Ta ≤ +65 °C</td>
<td>-50 °C ≤ Ta ≤ +65 °C</td>
</tr>
<tr>
<td>T5</td>
<td>-50 °C ≤ Ta ≤ +70 °C</td>
<td>-50 °C ≤ Ta ≤ +70 °C</td>
</tr>
</tbody>
</table>

2. 用于爆炸性粉尘环境中，产品使用环境温度为：-20 °C ≤ Ta ≤ +85 °C。

3. 产品外壳设有接地端子，用户在使用时应可靠接地。

4. 安装现场应不存在对产品外壳有腐蚀作用的有害气体。

5. 现场安装时，电缆引入口须选用国家指定的防爆检验机构按检验认可、具有 Ex dIIIC，Ex tD A20 IP66 防爆等级的电缆引入装置或堵封件，冗余电缆引入口须用堵封件有效密封。

6. 用于爆炸性气体环境中，现场安装、使用和维护必须严格遵守“断电后开盖！”的警告语。用于爆炸性粉尘环境中，现场安装、使用和维护必须严格遵守“爆炸性粉尘场所严禁开盖！”的警告语。

7. 用于爆炸性粉尘环境中，产品外壳表面需保持清洁，以防粉尘堆积，但严禁用压缩空气吹扫。

8. 用户不得自行更换该产品的零部件，应会同产品制造商共同解决运行中出现的故障，以杜绝损坏现象的发生。
9. 产品的安装、使用和维护应同时遵守产品使用说明书、
GB3836.13-2013“爆炸性环境 第 13 部分：设备的修理、检修、修
复和改造”、GB3836.15-2000“爆炸性气体环境用电气设备 第 15 部
分：危险场所电气安装（煤矿除外）”、GB3836.16-2006“爆炸性气
体环境用电气设备 第 16 部分：电气装置的检查和维护（煤矿除
外）”、GB50257-2014“电气装置安装工程爆炸和火灾危险环境电
力装置施工及验收规范”和 GB15577-2007“粉尘防爆安全规程”、
GB12476.2-2010“可燃性粉尘环境用电气设备 第 2 部分：选型和安
装”的有关规定。

I3 China Intrinsic Safety

Certificate  GYJ17.1509X
Standards  GB3836.1-2010, GB3836.4-2010, GB3836.20-2010
Markings  Ex ia IIC T5/T4 Ga

产品安全使用特殊条件：

证书编号后缀“X”表明产品具有安全使用特殊条件：

1. 产品外壳含有轻金属，用于 0 区时需注意防止由于冲击或摩擦产生的点燃危险。

2. 此设备不能承受 GB3836.4-2010 标准中第 6.3.12 条规定的 500 V
交流有效值试验电压的介电强度试验。

产品使用注意事项：

1. 产品使用环境温度为：

<table>
<thead>
<tr>
<th>温度组别</th>
<th>环境温度</th>
</tr>
</thead>
<tbody>
<tr>
<td>T5</td>
<td>-60 ℃ ≤ T_a ≤ +40 ℃</td>
</tr>
<tr>
<td>T4</td>
<td>-60 ℃ ≤ T_a ≤ +70 ℃</td>
</tr>
</tbody>
</table>

2. 本安电气参数：

<table>
<thead>
<tr>
<th>最高输入电压 ( U_i ) (V)</th>
<th>最大输入电流 ( I_i ) (mA)</th>
<th>最大输入功率 ( P_i ) (W)</th>
<th>最大内部等效参数</th>
</tr>
</thead>
<tbody>
<tr>
<td>30</td>
<td>200</td>
<td>0.9</td>
<td>12</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>0</td>
</tr>
</tbody>
</table>

3. 该产品必须与已通过防爆认证的关联设备配套共同组成本安防爆系
统方可使用于爆炸性气体环境。其系统接线必须同时遵守本产品和
所配关联设备的使用说明书要求，接线端子不得接错。
4. 用户不得自行更换该产品的零部件，应会同产品制造商共同解决运行中出现的故障，以杜绝损坏现象的发生。

**产品安全使用特殊条件：**

产品防爆合格证号后缀“X”代表产品安全使用有特殊条件：此设备不能承受GB3836.8-2014标准中第6.5.1条规定的500V对地电压试验1分钟，安装时需考虑在内。

**产品使用注意事项：**

1. 产品使用环境温度范围为：\(-40 \leq T_a \leq +70 \)℃。

2. 最高输入电压：42.4 Vdc。

3. 现场安装时，电缆引入口须选用经国家指定的防爆检验机构检验认可的、具有Ex eIIC Gb或Ex nA IIC Gc防爆等级及IP66外壳防护等级的电缆引入装置或堵封件，冗余电缆引入口须用堵封件有效密封。电缆引入装置或堵封件的安装使用必须遵守其使用说明书的要求并保证外壳防护等级达到IP54（符合GB4208-2008标准要求）以上。

4. 用户不得自行更换该产品的零部件，应会同产品制造商共同解决运行中出现的故障，以杜绝损坏现象的发生。

5.1.5 Combinations

**K7** Combination of E7, I7, and N7

**K8** Combination of E8, I1, and N1
5.2 Rosemount 3051G Pressure Transmitter

5.2.1 European Directive Information

A copy of the EU Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EU Declaration of Conformity can be found at Emerson.com/Rosemount.

5.2.2 Ordinary Certification Location

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

5.2.3 North America

**E5 USA Explosionproof (XP) and Dust-Ignitionproof (DIP)**

**Certificate** 0T2H0.AE

Special Conditions for Safe Use (X):

1. This device contains a thin wall diaphragm less than 1 mm thickness that forms a boundary between zone 0 (process connection) and zone 1 (all other parts of the equipment). The model code and datasheet are to be consulted for details of the diaphragm material. Installation, maintenance and use shall take into account the environmental conditions to which the diaphragm will be subjected. The manufacturer’s instructions for installation and maintenance shall be followed in detail to assure safety during its expected lifetime.

2. Flameproof joints are not intended for repair.

3. Non-standard paint options may cause risk from electrostatic discharge. Avoid installations that could cause electrostatic build-up on painted surfaces, and only clean the painted surfaces with a damp cloth. If paint is ordered through a special option code, contact the manufacturer for more information.

4. Appropriate cable, glands and plugs need to be suitable for a temperature of 5 °C greater than maximum specified temperature for location where installed.

5. The user must ensure that the maximum rated voltage and current (36 volts, 24 milliamps, d.c.) are not exceeded. All connections to other apparatus or associated apparatus shall have control over this voltage and current equivalent to a category ‘ib’ circuit according to EN 50020.

6. Cable entries must be used which maintain the ingress protection of the enclosure to at least IP66.

7. Unused cable entries must be filled with suitable blanking plugs which maintain the ingress protection of the enclosure to at least IP66.

8. Cable entries and blanking plugs must be suitable for the ambient range of the apparatus and capable of withstanding a 7J impact test.

9. Rosemount 2088/2090 sensor module must be securely screwed in place to maintain the ingress protection of the enclosure.
10. Some variants of the equipment have reduced markings on the nameplate. Refer to the Certificate for full equipment marking.
