Rosemount™ 3051S Electronic Remote Sensor (ERS)™ System

with HART® Protocol
Safety messages

**NOTICE**

This guide provides basic guidelines for the Rosemount™ 3051S ERS System. It does not provide instructions for diagnostics, maintenance, service, or troubleshooting. Refer to the Rosemount 3051S ERS Reference Manual for more instruction. This document is also available electronically on Emerson.com/Rosemount.

**WARNING**

Explosions could result in death or serious injury.
Installation of device in an explosive environment must be in accordance with appropriate local, national, and international standards, codes, and practices.
Review the Rosemount 3051S/3051SFx/3051S-ERS Product Certifications section of this guide for any restrictions associated with a safe installation.

- Before connecting a handheld communicator in an explosive atmosphere, make sure the instruments in the loop are installed in accordance with intrinsically safe or non-incendive field wiring practices.
- In an explosion-proof/flameproof installation, do not remove the transmitter covers when power is applied to the unit.

Process leaks could result in death or serious injury.
- Install and tighten process connectors before applying pressure.

Electrical shock could cause death or serious injury.
- Avoid contact with the leads and terminals. High voltage that may be present on leads can cause electrical shock.

Conduit/cable entries
- Unless marked, the conduit/cable entries in the transmitter housing use a $\frac{1}{2}$–14 NPT thread form. Entries marked “M20” are M20 $\times$ 1.5 thread form. On devices with multiple conduit entries, all entries will have the same thread form. Only use plugs, adapters, glands, or conduit with a compatible thread form when closing these entries.

1 Identify system components

A complete Rosemount ERS system contains two sensors. One is mounted on the high-pressure (P\textsubscript{HI}) process connection, and the other is mounted on the low-pressure (P\textsubscript{LO}) process connection. An optional remote display and interface may also be included (not pictured) if ordered.

Procedure

1. Look at the wire-on tag on the Rosemount 3051S sensor to identify whether it is configured as the P\textsubscript{HI} or P\textsubscript{LO} sensor.

2. Note
For new installations or applications, the second Rosemount 3051S ERS sensor may have been shipped in a separate box.

If servicing or replacing part of an existing Rosemount 3051S ERS system, the other sensor may already be installed.

Locate the second sensor that will be used in the Rosemount 3051S ERS system.
Sensor mounting

Mount the $P_{HI}$ and $P_{LO}$ sensors at the correct process connections for the application. This section shows some common installations.

Vertical installation

In a vertical installation such as on a vessel or distillation column, the $P_{HI}$ sensor should be installed at the bottom process connection. The $P_{LO}$ sensor should be installed at the top process connection.

Horizontal installation

In a horizontal installation, the $P_{HI}$ sensor should be installed at the upstream process connection. The $P_{LO}$ sensor should be installed downstream.
2.1 Mounting brackets

Figure 2-1: Mounting Bracket – Coplanar Flange

Figure 2-2: Mounting Brackets – Traditional Flange
Panel mount       Pipe mount

Figure 2-3: Mounting Brackets – In-line
Panel mount       Pipe mount
2.2 Bolt installation

If the installation requires assembly of a process flange, manifold, or flange adapters, follow these assembly guidelines to ensure a tight seal for optimal performance characteristics of the Rosemount™ 3051S ERS System. Only use bolts supplied with the transmitter or sold by Emerson™ as spare parts. Figure 2-4 illustrates common transmitter assemblies with the bolt length required for proper transmitter assembly.

**Figure 2-4: Common Transmitter Assemblies**

**A. Transmitter with coplanar flange**

**B. Transmitter with coplanar flange and flange adapters**

**C. Transmitter with traditional flange and flange adapters**

Bolts are typically carbon steel or stainless steel. Confirm the material by viewing the marking on the head of the bolt and referencing Table 2-1. If bolt material is not shown in Table 2-1, contact your local Emerson representative for more information.
**Note**  
Carbon steel bolts do not require lubrication. Stainless steel bolts are coated with a lubricant to ease installation, however no additional lubricant should be applied when installing either type of bolt.

**Procedure**

1. Finger-tighten the bolts.
2. Torque the bolts to the initial torque value using a crossing pattern. See Table 2-1 for initial torque value.
3. Torque the bolts to the final torque value using the same crossing pattern. See Table 2-1 for final torque value.
4. Verify that the flange bolts are protruding through the module isolator plate before applying pressure (See Figure 2-5).

2.3 O-rings with flange adapters

**WARNING**

Use only the O-rings included with the flange adapter for this sensor. Failure to install proper fitting flange adapter O-rings may cause process leaks, which can result in death or serious injury. When removing flanges or adapters, visually inspect the PTFE O-rings. Replace them if there are any signs of damage such as nicks or cuts. If replacing O-rings, re-torque the flange bolts after installation to compensate for seating of the PTFE O-ring.
3  **Consider housing rotation**

To improve field access to wiring or to better view the optional LCD display:

**Procedure**

1. Loosen the housing rotation set screw.
2. Turn the housing up to 180° left or right of its original (as shipped) position.
3. Retighten the housing rotation set screw.

---

**Figure 3-1: Plantweb Housing**

![Plantweb Housing Diagram]

A. Housing rotation set screw (3/32-in.)

**Figure 3-2: Junction Box Housing**

![Junction Box Housing Diagram]

A. Housing rotation set screw (3/32-in.)

**Note**

Do not rotate the housing on each transmitter more than 180° without first performing a disassembly procedure (see Rosemount 3051S ERS Reference Manual for more information). Over-rotation may sever the electrical connection between the sensor module and feature board electronics.
4  **Set the switches**

**Prerequisites**
If the sensor is equipped with alarm and security hardware switches, verify the desired configuration (default: alarm = HI, security = OFF).

**Procedure**

1. If the sensor is installed, secure the loop and remove power.
2. Remove the housing cover opposite the field terminals side. Do not remove the housing cover in explosive environments.
3. Slide the security and alarm switches into the preferred positions by using a small screwdriver.

**Figure 4-1: Transmitter Switch Configuration**

![Transmitter Switch Configuration](image)

A. **Security switch**  
B. **Alarm switch**

4. Reinstall the housing cover so that metal contacts metal to meet explosion-proof requirements.
5  **Connect wiring and power up**

The system can be wired in a variety of configurations, depending on the hardware that was ordered.

5  **Standard system**

**Procedure**

1. Remove the housing cover labeled “Field Terminals” on both sensors.
2. Using the communication cable (if ordered) or an equivalent 4-wire shielded assembly per the specifications detailed below, connect the 1, 2, A, and B terminals between the two sensors per Figure 5-1.
3. Connect the system to the control loop by connecting the + and - PWR/COMM terminals to the positive and negative leads, respectively.
4. Plug and seal all unused conduit connections.
5. If applicable, install wiring with a drip loop. Arrange the drip loop so the bottom is lower than the conduit connections on the transmitter housings.
6. Reinstall and tighten the housing covers on both sensors so that metal contacts metal to meet explosion-proof requirements.

5.1  **System with remote display and interface**

**Procedure**

1. Remove the housing cover labeled “Field Terminals” on both sensors and the remote housing.
2. Using the communication cable (if ordered) or an equivalent 4-wire shielded assembly per the specifications detailed below, connect the 1, 2, A, and B terminals between the two sensors and remote housing in a “tree” (Figure 5-2) or “daisy-chain” (Figure 5-3) configuration.
3. Connect the system to the control loop by connecting the + and - PWR/COMM terminals on the remote housing to the positive and negative leads, respectively.
4. Plug and seal all unused conduit connections.
5. If applicable, install wiring with a drip loop. Arrange the drip loop so that the bottom is lower than the conduit connections on the transmitter housings.
6. Reinstall and tighten all housing covers so that metal contacts metal to meet explosion-proof requirements.
5.2 Wiring diagrams

Figure 5-1, Figure 5-2, and Figure 5-3 show the wiring connections necessary to power a Rosemount 3051S ERS System and enable communications with a handheld communicator.

**Note**
The wiring connection between the sensors (and remote housing if applicable) must be made directly. An intrinsically safe barrier or other high-impedance device will cause the system to malfunction if placed between any of the sensors.

**Cable specifications**

<table>
<thead>
<tr>
<th><strong>Cable type</strong></th>
<th>Recommend Madison AWM Style 2549 cable. Other comparable cable may be used as long as it has independent dual twisted shielded pair wires with an outer shield. The power wires (pin terminals 1 and 2) must be 22 AWG minimum and the communication wires (pin terminals A and B) must be 24 AWG minimum.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Cable length</strong></td>
<td>Up to 150 ft (45.7 m) depending upon cable capacitance.</td>
</tr>
<tr>
<td><strong>Cable capacitance</strong></td>
<td>The capacitance between the communication terminals (pin terminals A and B) as wired must be less than 5000 picofarads total. This allows up to 50 picofarads per ft (0.3 m) for a 100 ft (31 m) cable.</td>
</tr>
<tr>

5.3 Shield grounding

Connect the shield from the communication cable assembly to each housing case as shown for the applicable wiring configuration in Figure 5-4.
**Figure 5-4: Shield Grounding**

A. **Cable shield**

### 5.4 Power supply

The DC power supply should provide power with less than two percent ripple. The total resistance load is the sum of the resistance of the two signal leads and the load resistance of the controller, indicator, intrinsic safety barriers, and related components.

**Load limitation**

- **If supply voltage ≤ 16.74 Vdc,**
  
  Maximum loop resistance = \(277.8 \times (\text{Power supply voltage} - 16.0)\)

- **If supply voltage > 16.74 Vdc,**
  
  Maximum loop resistance = \(43.5 \times (\text{Power supply voltage} - 12.0)\)
6 Verify configuration

As part of the basic commissioning process of the system, the parameters in Table 6-1 should be verified/configured with a HART-compliant master (see Figure 5-1, Figure 5-2, and Figure 5-3 for connecting a handheld communicator).

7 Calibrate the system

Each sensor is shipped fully calibrated per request or with the factory default of full scale. After the system has been installed and wired, either a zero trim or a lower sensor trim should be performed on each sensor to compensate for installation effects.

- A zero sensor trim should be performed after installing a gage sensor. A zero sensor trim should not be performed on an absolute sensor or on a gage sensor that is at line pressure.
- A lower sensor trim should be performed after installing an absolute sensor or a gage sensor that is at line pressure.

Additionally, a “System DP Zero” trim should be performed to establish a zero-based DP reading. The “System DP Zero” trim should be performed after a zero/lower trim has been performed on each sensor.

The steps outlined below detail the procedures for the sensor trims and the “System DP Zero” trim.

7.1 System calibration

Procedure
1. Equalize or vent both sensors and connect a handheld communicator as shown in Figure 5-1, Figure 5-2, and Figure 5-3.
2. Input the following Fast Key sequence on the handheld communicator to trim each sensor and the DP reading. Follow the commands prompted by the handheld communicator.

<table>
<thead>
<tr>
<th>Function</th>
<th>Fast Key sequence</th>
</tr>
</thead>
<tbody>
<tr>
<td>P-Hi Sensor Zero Trim</td>
<td>3, 4, 3, 1, 3</td>
</tr>
<tr>
<td>P-Hi Sensor Lower Trim</td>

</tr>
<tr>
<td>P-Lo Sensor Zero Trim</td>
<td>3, 4, 4, 1, 3</td>
</tr>
<tr>
<td>P-Lo Sensor Lower Trim</td>
<td>3, 4, 4, 1, 2</td>
</tr>
<tr>
<td>System DP Zero Trim</td>
<td>3, 4, 2, 1, 3</td>
</tr>
</tbody>
</table>

Postrequisites
The “System DP Zero Trim” should be performed after the P-Hi and P-Lo sensor trims. Refer to the Rosemount 3051S ERS Reference Manual for the recommended calibration procedure for performing a sensor trim at line pressure.
8 Rosemount 3051S/3051SFx/3051S-ERS Product Certifications

Rev 2.2

European Directive Information

A copy of the EU Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EU Declaration of Conformity can be found at Emerson.com/Rosemount.

Ordinary Location Certification

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

Installing Equipment in North America

The US National Electrical Code® (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area classification, gas, and temperature class. This information is clearly defined in the respective codes.

Special Conditions for Safe Use (X):

1. This device contains a thin wall diaphragm less than 1 mm thickness that forms a boundary between Category 1 (process connection) and Category 2 (all other parts of the equipment). The model code and datasheet are to be consulted for details of the diaphragm material. Installation, maintenance and use shall take into account the
The environmental conditions to which the diaphragm will be subjected. The manufacturer’s instructions for installation and maintenance shall be followed in detail to assure safety during its expected lifetime.

2. Flameproof joints are not intended for repair.

3. Non-standard paint options may cause risk from electrostatic discharge. Avoid installations that could cause electrostatic build-up on painted surfaces, and only clean the painted surfaces with a damp cloth. If paint is ordered through a special option code, contact the manufacturer for more information.

4. Appropriate cable, glands and plugs need to be suitable for a temperature of 5 °C greater than maximum specified temperature for location where installed.

**Special Conditions for Safe Use (X):**

1. This device contains a thin wall diaphragm less than 1 mm thickness that forms a boundary between EPL Ga (process connection) and EPL Gb (all other parts of the equipment). The model code and datasheet are to be consulted for details of the diaphragm material. Installation, maintenance and use shall take into account the environmental conditions to which the diaphragm will be subjected. The manufacturer’s instructions for installation and maintenance shall be followed in detail to assure safety during its expected lifetime.

2. Flameproof joints are not intended for repair.

3. Non-standard paint options may cause risk from electrostatic discharge. Avoid installations that could cause electrostatic buildup on painted surfaces, and only clean the painted surfaces with a damp cloth. If paint is ordered through a special option code, contact the manufacturer for more information.

4. Appropriate cable, glands and plugs need to be suitable for a temperature of 5 °C greater than maximum specified temperature for location where installed.

Harmonized Standards Used:

BAS01ATEX3304X – Type n Certificate
Equipment Group II, Category 3 G
Ex nA IIC T5 Gc
Harmonized Standards Used:

BAS01ATEX1374X – Dust Certificate
Equipment Group II, Category 1 D
Ex ta IIC T105°C Twa95°C Da
Harmonized Standards Used:
EN 60079-0:2012+A11:2013
Other Standards Used:
EN 60079-31:2009 (a review against EN 60079-31:2014, which is harmonized, shows no significant changes relevant to this equipment so EN 60079-31:2009 continues to represent “State of the Art”)

BAS04ATEX0181X – Mining Certificate
Equipment Group I, Category M1
Ex ia I Ma
Harmonized Standards Used:
EN 60079-0:2012, EN 60079-11:2012

BAS04ATEX0193U – Mining Certificate: Component
Equipment Group I, Category M1
Ex ia I Ma
Harmonized Standards Used:
EN 60079-0:2012, EN 60079-11:2012

KEMA00ATEX2143X – Flameproof Certificate
Equipment Group II, Category 1/2 G
Ex db IIC T6…T4 Ga/Gb
Harmonized Standards:
EU Declaration of Conformity
No: RMD 1044 Rev. AD

PED Notified Body

DNV GL Business Assurance Italia S.r.l. [Notified Body Number: 0496]
Via Energy Park, 14, N-20871
Vimercate (MB), Italy

Note – equipment manufactured prior to 20 October 2018 may be marked with the previous PED Notified Body number: previous PED Notified Body information was as follows:
Det Norske Veritas (DNV) [Notified Body Number: 0375]
Veritasveien 1, N-1322
Hovik, Norway

ATEX Notified Bodies for EU Type Examination Certificate

DEKRA Certification B.V. [Notified Body Number: 0344]
Utrechtseweg 310
Postbus 5185
6802 ED Arnhem
Netherlands

SGS FIMCO Y [Notified Body Number: 0598]
P.O. Box 30 (Särkineniemietie 3)
00211 HELSINKI
Finland

ATEX Notified Body for Quality Assurance

SGS FIMCO OY [Notified Body Number: 0598]
P.O. Box 30 (Särkineniemietie 3)
00211 HELSINKI
Finland
# 8.13 China RoHS

## List of Rosemount 3051SAL/3051SAM Parts with China RoHS Concentration above MCVs

本表格系按 SJ/T11364 规定而制作。This table is proposed in accordance with the provision of SJ/T11364.

O: 意为该部件的所有均质材料中该有害物质的含量均低于 GB/T 26572 所规定的限量要求。

O: Indicate that said hazardous substance in all of the homogeneous materials for this part is below the limit requirement of GB/T 26572.

X: 意为在该部件所使用的所有均质材料里，至少有一类均质材料中该有害物质的含量高于 GB/T 26572 所规定的限量要求。

X: Indicate that said hazardous substance contained in at least one of the homogeneous materials used for this part is above the limit requirement of GB/T 26572.
