Rosemount 3051S Electronic Remote Sensor (ERS)™ System

with HART® Protocol
NOTICE
This guide provides basic guidelines for the Rosemount 3051S ERS System. It does not provide instructions for diagnostics, maintenance, service, or troubleshooting. Refer to the Rosemount 3051S ERS Reference Manual for more instruction. This document is also available electronically on EmersonProcess.com/Rosemount.

WARNING
Explosions could result in death or serious injury.
Installation of this transmitter in an explosive environment must be in accordance with the appropriate local, national, and international standards, codes, and practices. Review the approvals section of the Rosemount 3051S ERS Reference Manual for any restrictions associated with a safe installation.

- Before connecting a Field Communicator in an explosive atmosphere, ensure the instruments in the loop are installed in accordance with intrinsically safe or non-incendive field wiring practices.
- In an Explosion-proof/Flameproof installation, do not remove the transmitter covers when power is applied to the unit.

Process leaks may cause harm or result in death.
- Install and tighten process connectors before applying pressure.

Electrical shock can result in death or serious injury.
- Avoid contact with the leads and terminals. High voltage that may be present on leads can cause electrical shock.

Conduits/cable entries
- Unless otherwise marked, the conduit / cable entries in the Rosemount 3051S ERS housing enclosure use a 1/2–14 NPT form. Only use plugs, adapters, glands, or conduit with a compatible thread form when closing these entries.

1.0 Identify all Rosemount 3051S ERS System components

A complete Rosemount ERS system contains two sensors. One is mounted on the high-pressure (P_HI) process connection, and the other is mounted on the low-pressure (P_LO) process connection. An optional remote display and interface may also be included (not pictured) if ordered.

1. Look at the wire-on tag on the Rosemount 3051S sensor to identify whether it is configured as the P_HI or P_LO sensor.

2. Locate the second sensor that will be used in the Rosemount 3051S ERS system:
   - For new installations or applications, the second Rosemount 3051S ERS sensor may have been shipped in a separate box.
   - If servicing or replacing part of an existing Rosemount 3051S ERS system, the other sensor may already be installed.

2.0 Mount each Rosemount 3051S ERS

Mount the P_HI and P_LO sensors at the correct process connections for the application. Common Rosemount 3051S ERS installations are shown in Figure 1 and Figure 2.

2.1 Vertical installation

In a vertical installation such as on a vessel or distillation column, the P_HI sensor should be installed at the bottom process connection. The P_LO sensor should be installed at the top process connection.

Figure 1. Vertical Rosemount 3051S ERS Installation
2.2 Horizontal installation

In a horizontal installation, the $P_{HI}$ sensor should be installed at the upstream process connection. The $P_{LO}$ sensor should be installed downstream.

![Horizontal Rosemount 3051S ERS Installation](image)

2.3 Mounting bracket

![Mounting Bracket Assemblies](image)
2.4 Bolting

If the installation requires assembly of a process flange, manifold, or flange adaptors, follow these assembly guidelines to ensure a tight seal for optimal performance characteristics of the Rosemount 3051S ERS System. Only use bolts supplied with the transmitter or sold by Emerson™ Process Management as spare parts. Figure 4 illustrates common transmitter assemblies with the bolt length required for proper transmitter assembly.

Figure 4. Common Transmitter Assemblies

A. Transmitter with coplanar flange
B. Transmitter with coplanar flange and flange adapters
C. Transmitter with traditional flange and flange adapters

Bolts are typically carbon steel or stainless steel. Confirm the material by viewing the marking on the head of the bolt and referencing Table 1. If bolt material is not shown in Table 1, contact your local Emerson Process Management representative for more information.

Use the following bolt installation procedure:
1. Carbon steel bolts do not require lubrication. Stainless steel bolts are coated with a lubricant to ease installation, however no additional lubricant should be applied when installing either type of bolt.
2. Finger-tighten the bolts.
3. Torque the bolts to the initial torque value using a crossing pattern.
   See Table 1 for initial torque value.
4. Torque the bolts to the final torque value using the same crossing pattern.
   See Table 1 for final torque value.
5. Verify that the flange bolts are protruding through the module isolator plate before applying pressure (See Figure 5).
3.0 Consider housing rotation

To improve field access to wiring or to better view the optional LCD display:
1. Loosen the housing rotation set screw.
2. Turn the housing up to 180° left or right of its original (as shipped) position.
3. Retighten the housing rotation set screw.

O-rings with flange adapters

WARNING

Use only the O-rings included with the flange adapter for the 3051S ERS sensor. Failure to install proper fitting flange adapter O-rings may cause process leaks, which can result in death or serious injury.

When removing flanges or adapters, visually inspect the PTFE O-rings. Replace them if there are any signs of damage such as nicks or cuts. If replacing O-rings, re-torque the flange bolts after installation to compensate for seating of the PTFE O-ring.

Figure 6. Housing Rotation

A. Housing rotation set screw (1/32-in.)
Note
Do not rotate the housing on each transmitter more than 180° without first performing a disassembly procedure (see Section 2 of the Rosemount 3051S ERS Reference Manual for more information). Over-rotation may sever the electrical connection between the sensor module and feature board electronics.

4.0 Set switches
If the Rosemount 3051S ERS sensor is equipped with alarm and security hardware switches, verify the desired configuration (default: alarm = HI, security = OFF).
1. If the sensor is installed, secure the loop and remove power.
2. Remove the housing cover opposite the field terminals side. Do not remove the housing cover in explosive environments.
3. Slide the security and alarm switches into the preferred positions by using a small screwdriver.
4. Reinstall the housing cover so that metal contacts metal to meet explosion-proof requirements.

Figure 7. Transmitter Switch Configuration

A. Security switch
B. Alarm switch

5.0 Connect wiring and power up
A Rosemount 3051S ERS System can be wired in a variety of configurations, depending on the hardware that was ordered.

5.1 Standard Rosemount 3051S ERS system (Figure 8)
1. Remove the housing cover labeled “Field Terminals” on both Rosemount 3051S ERS sensors.
2. Using the Rosemount 3051S ERS communication cable (if ordered) or an equivalent 4-wire shielded assembly per the specifications detailed below, connect the 1, 2, A, and B terminals between the two sensors per Figure 8.
3. Connect the Rosemount 3051S ERS System to the control loop by connecting the + and - PWR/COMM terminals to the positive and negative leads, respectively.
4. Plug and seal all unused conduit connections.
5. If applicable, install wiring with a drip loop. Arrange the drip loop so that the bottom is lower than the conduit connections on the transmitter housings.

6. Reinstall and tighten the housing covers on both sensors so that metal contacts metal to meet explosion-proof requirements.

5.2 Rosemount 3051S ERS system with remote display and interface (Figure 9 and Figure 10)

1. Remove the housing cover labeled “Field Terminals” on both Rosemount 3051S ERS sensors and the remote housing.

2. Using the Rosemount 3051S ERS communication cable (if ordered) or an equivalent 4-wire shielded assembly per the specifications detailed below, connect the 1, 2, A, and B terminals between the two sensors and remote housing in a “tree” (Figure 9) or “daisy-chain” (Figure 10) configuration.

3. Connect the Rosemount 3051S ERS System to the control loop by connecting the + and - PWR/COMM terminals on the remote housing to the positive and negative leads, respectively.

4. Plug and seal all unused conduit connections.

5. If applicable, install wiring with a drip loop. Arrange the drip loop so that the bottom is lower than the conduit connections on the transmitter housings.

6. Reinstall and tighten all housing covers so that metal contacts metal to meet explosion-proof requirements.

5.3 Wiring diagrams

Figure 8 to Figure 10 show the wiring connections necessary to power a Rosemount 3051S ERS System and enable communications with a hand-held Field Communicator.

**Note**

The wiring connection between the sensors (and remote housing if applicable) must be made directly. An intrinsically safe barrier or other high-impedance device will cause the Rosemount 3051S ERS System to malfunction if placed in between any of the Rosemount 3051S ERS sensors.

5.4 Rosemount 3051S ERS cable specifications

**Cable type:** Recommend Madison AWM Style 2549 cable. Other comparable cable may be used as long as it has independent dual twisted shielded pair wires with an outer shield. The power wires (pin terminals 1 and 2) must be 22 AWG minimum and the communication wires (pin terminals A and B) must be 24 AWG minimum.

**Cable length:** Up to 150 ft (45.7 m) depending upon cable capacitance.

**Cable capacitance:** The capacitance between the communication terminals (pin terminals A and B) as wired must be less than 5000 picofarads total. This allows up to 50 picofarads per ft (0,3 m) for a 100 ft (31 m) cable.

**Cable outside diameter (O.D.):** 0.270-in. (6,86 mm)

5.5 Shield grounding

Connect the shield from the Rosemount 3051S ERS communication cable assembly to each housing case as shown for the applicable wiring configuration in Figure 11.

Figure 11. Shield Grounding

A. Cable shield
5.6 Power supply

The DC power supply should provide power with less than two percent ripple. The total resistance load is the sum of the resistance of the two signal leads and the load resistance of the controller, indicator, intrinsic safety barriers, and related components.

**Figure 12. Load Limitation**

If supply voltage \( \leq 16.74 \text{ Vdc} \),

Maximum loop resistance = \( 277.8 \times (\text{Power supply voltage} - 16.0) \)

If supply voltage > 16.74 Vdc,

Maximum loop resistance = \( 43.5 \times (\text{Power supply voltage} - 12.0) \)

6.0 Verify configuration

As part of the basic commissioning process of the Rosemount 3051S ERS System, the parameters in Table 5 should be verified/configured with a HART-compliant master (see Figure 8 to Figure 10 for connecting a hand-held Field Communicator):

**Table 5. Basic Configuration HART Fast Key Sequence**
The items in Table 6 are considered “optional” and can be configured as necessary:

7.0 Calibrate the Rosemount 3051S ERS System

Each Rosemount 3051S ERS sensor is shipped fully calibrated per request or with the factory default of full scale. After the Rosemount 3051S ERS System has been installed and wired, either a zero trim or a lower sensor trim should be performed on each sensor to compensate for installation effects.

- A zero sensor trim should be performed after installing a gage sensor. A zero sensor trim should not be performed on an absolute sensor or on a gage sensor that is at line pressure.
- A lower sensor trim should be performed after installing an absolute sensor or a gage sensor that is at line pressure.

Additionally, a “System DP Zero” trim should be performed to establish a zero-based DP reading. The “System DP Zero” trim should be performed after a zero/lower trim has been performed on each sensor.

The steps outlined below detail the procedures for the sensor trims and the “System DP Zero” trim.

### 7.1 Rosemount 3051S ERS System calibration

1. Equalize or vent both Rosemount 3051S ERS sensors and connect a Field Communicator as shown in Figure 8 to Figure 10.

2. Input the following Fast Key sequence on the Field Communicator to trim each sensor and the DP reading. Follow the commands prompted by the Field Communicator.

<table>
<thead>
<tr>
<th>Function</th>
<th>Fast Key sequence</th>
</tr>
</thead>
<tbody>
<tr>
<td>P-Hi Sensor Zero Trim</td>
<td>3, 4, 3, 1, 3</td>
</tr>
<tr>
<td>P-Hi Sensor Lower Trim</td>
<td>3, 4, 3, 1, 2</td>
</tr>
<tr>
<td>P-Lo Sensor Zero Trim</td>
<td>3, 4, 4, 1, 3</td>
</tr>
<tr>
<td>P-Lo Sensor Lower Trim</td>
<td>3, 4, 4, 1, 2</td>
</tr>
<tr>
<td>System DP Zero Trim</td>
<td>3, 4, 2, 1, 3</td>
</tr>
</tbody>
</table>

**Note**

1. The “System DP Zero Trim” should be performed after the P-Hi and P-Lo sensor trims.
2. Refer to the Rosemount 3051S ERS Reference Manual for the recommended calibration procedure for performing a sensor trim at line pressure.
8.0 Product Certifications

8.1 European Directive Information

A copy of the EU Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EU Declaration of Conformity can be found at EmersonProcess.com/Rosemount.

8.2 Ordinary Location Certification

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

8.3 Installing Equipment in North America

The US National Electrical Code® (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area classification, gas, and temperature class. This information is clearly defined in the respective codes.

Application:  Environmental categories ENV1, ENV2, ENV3, and ENV5

**D3**  Custody Transfer – Measurement Canada Accuracy Approval [3051S Only]  
Certificate:  AG-0501, AV-2380C
Figure 13. Rosemount 3051S Declaration of Conformity

EU Declaration of Conformity
No: RMD 1044 Rev. Y

We, Rosemount Inc.
8200 Market Boulevard
Chanhassen, MN 55317-9685
USA

declare under our sole responsibility that the product,
Rosemount 3051S Series Pressure Transmitters
Rosemount 3051SFX Series Flowmeter Transmitters
Rosemount 300S Housings
manufactured by,
Rosemount Inc.
8200 Market Boulevard
Chanhassen, MN 55317-9685
USA
to which this declaration relates, is in conformity with the provisions of the European Union Directives, including the latest amendments, as shown in the attached schedule.

Assumption of conformity is based on the application of the harmonized standards and, when applicable or required, a European Union notified body certification, as shown in the attached schedule.

This table is proposed in accordance with the provision of SJ/T11364.

O: Indicate that said hazardous substance in all of the homogeneous materials for this part is below the limit requirement of GB/T 26572.

X: Indicate that said hazardous substance contained in at least one of the homogeneous materials used for this part is above the limit requirement of GB/T 26572.
