

Advanced Power and Water Cybersecurity Suite Services

Realize the Full Potential of Your Power and Water Cybersecurity Suite

The Power and Water Cybersecurity Suite (PWCS) is a powerful suite of hardware appliances and virtualized functions that enhance system security, while assisting and supporting compliance obligations. The PWCS components scan for vulnerabilities, manage patches, prevent malware, defend against viruses, log/stores security incidents and events, detect network based intrusion and backup and recover your Ovation™ systems.

Often, the PWCS is not used to its fullest extent due to limited manpower, required technical expertise, or lack of training. In many cases, these challenges prevent system owners from realizing the full potential of the PWCS for assisting with system security and compliance.

Emerson's security solutions group can provide advanced PWCS services for customers who need assistance with realizing the full potential and effectiveness of their cybersecurity equipment.

Advanced PWCS services are performed onsite by Emerson's security solutions engineers, who possess a unique blend of control system experience, an understanding of networking complexities and cybersecurity expertise.

Advanced PWCS services include the following deliverables:

- Ninety-point checkup to ensure optimal configuration for your environment
- Update of PWCS with the latest available content
- End user hands-on-training and review of each PWCS component
- Recommendations of PWCS customizations to enhance utilization

In addition to the above deliverables, this service can be customized to include the following options:

- Patch deployments
- Update and deployment of antivirus definitions
- Review of logs for events and anomalies
- Perform and archive system backups
- Vulnerability scans

Advanced PWCS services provide the resources and expertise to ensure that your Power and Water Cybersecurity Suite is current with the latest content and optimal configuration. Regularly scheduled visits by Emerson's security solutions specialists are recommended to assist in keeping content up-to-date, to provide expert training to end users and to continually identify potential enhancements for how the PWCS is used in your plant. This service ensures the optimum use of the PWCS to automate repetitive and time consuming tasks, maintain a strong security posture and assist with compliance.
