Keep Your Process Flowing—From Field to Control Room

AMS Trex Device Communicator + DCMlink Integration

Work Smarter. Diagnose Faster. Operate Safer.

Combine the power of AMS Trex™ handheld mobility with DCMlink™ centralized actuator intelligence to streamline device diagnostics and configuration, anywhere in your plant.

The Power of Integration

From control room to handheld—one continuous workflow:

- Configure and troubleshoot devices in the field with Trex
- Gain real-time visibility and control of actuators locally through a Bluetooth connection

Result: Faster decisions, fewer disruptions, and optimized asset performance.

Enhance Diagnostics & Reduce Downtime

- Advanced actuator diagnostics **at your fingertips**
- Identify and resolve issues **on the spot—without invasive inspections**

Keep Your Process Flowing

- View and modify parameters **without interrupting operations**
- Real-time actuator control
- Fix problems faster and **restore operations quickly**

Work Safely From a Distance ("Locally Remote")

- Operate and monitor actuators **without standing in hazardous areas**
- **Bluetooth-enabled communication** supports remote interaction in the field

Simplify Commissioning & Configuration

- Download and reuse actuator configurations for faster installs
- **Configure, calibrate, and validate** devices inline
- **Unified interface** across Bettis™ and Biffi™ actuators

Built for Productivity in the Field

- Rugged, **intrinsically safe handheld** designed for harsh environments
- Diagnose **over 2,500 devices** directly onsite
- Access device manuals, alarms, and alerts in the palm of your hand

EMERSON

With AMS Trex + DCMlink integration, your team can:

- Reduce troubleshooting time with guided diagnostics and clear alerts
- Improve maintenance efficiency and lower costs
- Standardize actuator management across your plant
- Increase uptime with faster, more confident decisions

Integrated Workflow at a Glance

FIELD (Trex) → Diagnose → Configure → Capture Data

One integrated solution. Total control.

Deliver smarter maintenance, safer operations, and continuous process performance by connecting mobile field intelligence with centralized actuator management.

Learn how AMS Trex + DCMlink can transform your maintenance and actuator performance strategy.
