

AMS Device Manager Audit Trail

- Reduce costs by consolidating steps
- Save time by viewing device history easily
- Easy access to device status information

Date	Time	AMS Tag	User	Event Type	Reason
11/6/2023	4:43:16 AM		SD-753a	Application	Successful login of user: SD-753a\amadmin to AMS Device Manager
11/6/2023	4:43:07 AM		PS-SD-753	Application	AMS Device Manager has been started
11/6/2023	4:47:50 AM		PS-SD-753	Application	AMS Device Manager has been shutdown
11/6/2023	4:45:13 AM		SD-753a..	Application	Rebuild Hierarchy performed on: USD-753\10.164.192.95
11/6/2023	4:44:52 AM		SD-753a..	Application	Successful login of user: SD-753a\amadmin to AMS Device Manager
11/6/2023	4:44:43 AM		PS-SD-753	Application	AMS Device Manager has been started
11/6/2023	4:43:24 AM		PS-SD-753	Application	AMS Device Manager has been shutdown

11/6/2023	3:35:32 AM		SD-753a..	Calibration	Disable allow use of test equipment which is past due for calibration.
11/6/2023	3:25:53 AM	SWITCH_CONV	SD-753a..	Calibration	Calibration
11/6/2023	3:25:47 AM		SD-753a..	Calibration	Disable allow use of test equipment which is past due for calibration.
11/6/2023	2:31:28 AM	SWITCH_CONV	SD-753a..	Calibration	Calibration
11/6/2023	2:29:11 AM	TEST_EGPT	SD-753a..	Configuration Change	Outdialing values
11/6/2023	2:28:11 AM	TEST_EGPT	SD-753a..	Calibration	AMS tag assignment
11/6/2023	2:28:11 AM	TEST_EGPT	SD-753a..	Configuration Change	AMS tag assignment
11/6/2023	2:11:00 AM	SWITCH_CONV	SD-753a..	Calibration	Calibration
11/6/2023	2:11:00 AM	SWITCH_CONV	SD-753a..	Configuration Change	Outdialing values
11/6/2023	2:06:36 AM	SWITCH_CONV	SD-753a..	Calibration	Calibration
11/6/2023	2:06:29 AM	SWITCH_CONV	SD-753a..	Configuration Change	AMS tag assignment
11/6/2023	2:06:29 AM	SWITCH_CONV	SD-753a..	Calibration	AMS tag assignment
11/6/2023	1:58:45 AM		SD-753a..	Calibration	Disable allow use of test equipment which is past due for calibration.
11/6/2023	1:05:53 AM		SD-753a..	Application	Scan All completed on USD-753
11/6/2023	12:05:52 AM	DVC6200	SD-753a..	Configuration Change	Field change
11/6/2023	12:05:52 AM	DVC6200	SD-753a..	Device Synchroniz.	Device/database synchronization successful with 441 differences found
11/7/2023	11:45:59 PM	THUM Adapter_01	SD-753a..	Configuration Change	Field change
11/7/2023	11:45:59 PM	THUM Adapter_01	SD-753a..	Device Synchroniz.	Device/database synchronization successful with 240 differences found
11/7/2023	11:45:52 PM	Reassemble_702_Rev3	SD-753a..	Configuration Change	Field change
11/7/2023	11:45:52 PM	Reassemble_702_Rev3	SD-753a..	Device Synchroniz.	Device/database synchronization successful with 386 differences found

The Audit Trail option enables you to contain documentation costs by automating record-keeping.

Reduce Costs by Consolidating Steps

Keeping accurate, on-going records is essential in regulated industries — but it can be costly. You perform a task, then you must document it. But sometimes documenting a task requires more time than performing it. Save time and money by consolidating those steps through the AMS Device Manager Audit Trail option.

As you perform your tasks, the Audit Trail works in the background to automatically create the necessary documentation trail.

Save Time by Viewing Device History Easily

At a moment's notice, you can determine when and by whom a particular device was reconfigured or tested. You'll find which parameters were changed and for what reason. Sharpen your information searches and investigate specific circumstances by filtering Audit Trail events.

Easy Access to Device Status Information

Find problem areas quickly without sorting through reams of paper. Perform a search and discover relevant field device information that will lead to process improvements.

Overview

The Audit Trail option for AMS Device Manager provides historical records of device configuration changes and performance.

Audit Trail does not write occurring nuisance or repetitive alerts.

You can access any record by clicking on the Audit Trail menu that appears adjacent to each device. All records are date- and time-stamped and have a user and PC correlation. To ensure data integrity, historical records cannot be edited.

Each record allows users to look at changes to the device and the reason for change.

Records are tied to a plant location (or tag) and to a specific device. For example, the Audit Trail for a specific tag shows all devices and changes associated with that plant location, creating a seamless record of events.

The tabular format of the Audit Trail allows you to review all configuration changes or focus on a few specific changes. You can also view records for an entire plant or for a single device. With the power to focus your view, you can more easily analyze information.

The Audit Trail categorizes the following information:

- Device configuration records
- Calibration records
- Diagnostic information

Device Configuration Records

Retain device configuration records, including all device identification information such as output range and materials of construction. These records can be used to help meet process safety requirements.

Calibration Activities

For each tag, the Audit Trail records results of as-found/as-left tests. The results are stored in a historical file, providing a documentation trail for international standards organizations or regulatory agencies. By reviewing the historical file, you can determine when a particular device was tested and calibrated.

Also, you can determine who conducted the test, the individual test points and errors, the serial number of the test equipment, and any notes taken during the test or calibration.

Diagnostic Information

The Audit Trail stores information about status changes occurring in field devices. In fact, you can choose which status alerts trigger an Audit Trail event and which parameters are included in the Audit Trail record. You can store field device status data such as analog output saturated condition, communication failure, device malfunction, and process variables that are out of limits.

Maintenance Records

When files are backed up, uploaded, or merged from other AMS Device Manager PCs, the Audit Trail automatically records the event. This feature enables you to view instances when the database was backed up and by whom.

User-Defined Events

In addition to automatically creating Audit Trail events, AMS Device Manager allows you to manually enter any activity that is not already tracked. You can document events that may affect your device performance, such as a power outage. Leverage the power of AMS Device Manager and intelligent devices to automate your documentation process with the Audit Trail.

Ordering Information

Description	Part Number
Audit Trail license	AW7005ATxxxxx; where xxxxx refers to the number tags (must match the Server Plus tag size)
